Goodsell the Next.

Soon after the committee met on Friday there was an intimation from counsel that in what had been called "this phase" of the investigation the speculative Wall Street accounts of some six or seven living members or ex-members of the New York Legislature would be placed upon the record.

Chief Counsel Bruce announced that for the

day only two witnesses would be called—George Carpenter, the bookkeeper, and ex-Senator Goodsell. The plan appeared to be to take up one account at a time, analyze it by the aid of the bookkeeper and then call the members or the ex-member of the Legislature in whose name the investigated account stood.

Thursday showed that for Assemblyman Bedell there had been deposited with Ellingwood & Cunningham the sum of \$24,281. On Friday it was shown that ex-Senator Goodsell had deposited to his credit with that brokerage firm \$24,800.

All but \$5,000 deposited in Mr. Bedell's account had been traced to its source, and on Thursday all but \$6,000 of the sum deposited to the account of Mr. Goodsell was also traced to its source, in each case the source being either officers of New York City traction companies or the Street Railway Association of New York State. The failure to trace to their source some of the deposits was explained by the fact that after a certain date there were no entries in the back of check books to show the source of checks received, such entries after that date being made in a deposit book. That book has not been found.

While the totals deposited to their credit and the totals traced to their source in the cases of ex-Assemblyman Bedell and ex-Senator Goodsell were nearly alike there was a substantial difference in the amounts drawn. Assemblyman Bedell had a total credit of more than \$3,000 greater than the total of his drafts, whereas Mr. Goodsell drew the sum of the deposits to his credit less only \$59.76.

Senator Goodsell, who introduced the bill giving the perpetual and extended franchise to the Fifth Avenue Stage Company and granting it the right to charge 10 cents fare, received from H. A. Robinson on April 21, 1900, \$9,000. That is, H. A. Robinson, chief counsel of the Metropolitan, deposited on that day with Ellingwood & Cunningham \$9,000, which was placed to Mr. Goodsell's credit. That was sixteen days after the bill was passed and four days before Governor Roosevelt signed it.

An interesting development of that occurrence of ten years ago made known on Friday was that the bill favoring the New York Transportation Company had not glided through the Assembly and up to Governor Roosevelt without protest. Assemblyman Fitzgerald had moved to reconsider the vote by which the bill was passed, denouncing it as a graft bill, and twenty-five members of the Assembly, most of them from New York City, had voted to reconsider the vote by which the bill had been passed and sent to Governor Roosevelt as one of the thirty-day bills.

Then the proceedings of analyzing an account from pages of a loose leaf ledger, from blotters, check books

and cash books went on. It appeared that the then Senator Goodsell on April 6, 1900, the day after the rapid passage of the New York Transportation bill and the very day of the adjournment of the Legislature, brought to Ellingwood & Cunningham 100 shares of Transportation, for which the firm paid \$1,112.50. The Senator put up no margin at the time of the purchase nor did any one else, but eleven days after that and just a week before Governor Roosevelt signed the bill H. H. Vreeland deposited with Ellingwood & Cunningham \$3,000, of which \$300 went to the credit of Senator Goodsell as margin on his purchase, the balance going to Bedell and Rogers.

Then on April 23 a check for \$9,000, drawn on the Morton Trust Company by H. A. Robinson, was passed to Mr. Goodsell's credit.

On July 6, 1904, Mr. Goodsell seems to have got a strong hunch on Union Pacific, for he ordered his brokers to purchase 500 shares, which they did without annoying their client for any margin, and on July 18 sold it for him at a profit of about \$3,000.

Newburg Interest in New York.

"Why did you, from a Newburg district, feel charged with the duty of looking after such an important and intricate subject as New York City transportation?" Mr. Bruce asked.

"Oh, well," said the witness, and then he crossed his legs in the manner of one who had given a conclusive answer.

Mr. Goodsell confessed that he did not know exactly what avenues other than the Fifth it was proper for a stage to monopolize and charge 10 cents fare on, yet he felt an interest in New York transportation because he had once lived here.

"How long ago?" asked Mr. Bruce. "Forty years ago," replied the witness.

"That's sarcasm there, Judge," said the Senator.

"Oh, no," responded the counsel, "I was commending your diligence. However, should not the New York City authorities have been notified and the bill considered in the committee of the whole?"

"There was no protest by the Citizens Union—not a protest or a vote against it," said Mr. Goodsell.

"I find here," said Mr. Bruce, who was diligently searching a Senate journal, "that you introduced the bill on a Friday and adjourned over to Monday, and that on Monday the minutes report 'No clergyman present.'"

Counsel paused and lifted his eyes to the witness as if for a comment, but the ex-Senator merely shifted the crossing of his legs and remained silent.

34 Nassau Street

New York, N. Y.

In New England

BOSTON, Sept. 14.—The announcement that the Underwriters' Bureau of New England was to change its headquarters has been expected ever since John C. Paige & Co. and the Massachusetts Fire and Marine leased the building at 93 Water street, Boston, where the bureau has been domiciled for more than twenty years, practically the entire period of its existence. The new quarters will be located in the fourth floor of the addition to the Oliver Building, 141 Milk street, which is to be completed in the Spring of 1911. The "Little Bureau," as it is locally termed, has had quite a history, and many men notable in the insurance world have been identified with it.

Another Protest.

The Hon. Beecher Putnam, Insurance Commissioner of the State of Maine, in his annual report, adds his voice to the many that have been raised of late years against the exorbitant taxation of insurance premiums. He commends the action of the Maine Legislature, which at its last session acted adversely upon a report of the Tax Commission recommending an

annual tax of one-half of one per cent upon the net reserves of life policies. "I do not favor excessive taxation of insurance companies or policyholders," says Mr. Putnam, "and I would not advise any increase in the rate of insurance taxes paid to the State of Maine." He further notes that the State received during the year 1909 in taxes and fees from the insurance business more than ten times enough to defray the total cost of the Insurance Department for that year, and that tax receipts of that kind for 1910 will probably aggregate \$150,000.

A "Know Nothing" Governor.

A series of sketches of the Governors of Massachusetts under the Constitution has recently been published by the Boston Post. Particularly interesting to underwriters among these is that of Henry J. Gardner, who was elected by the Know Nothing party in 1854, and served from 1855 to 1858. Among the measures enacted during his administration was the creation of the Insurance Department, which was the first of its kind to be established in the United States, and now occupies such

a commanding position among the departments of the country. The influence exerted by Elizur Wright, one of the early Commissioners, in formulating advanced life insurance laws, is a matter of common knowledge.

After retiring from the Governorship, Mr. Gardner engaged in mercantile business, and in 1876 became resident manager at Boston for the Mutual Life Insurance Company of New York. The writer well remembers with what glee Mr. Gardner related at a dinner of the Boston Life Underwriters' Association, how he had been turned down when he applied for insurance in the Mutual Life in its early days, and how he had outlived every executive officer and the medical examiner in authority at that time. He died at Milton in July, 1892.

Fidelity and Deposit.

It is thought that the Fidelity and Deposit Company, which has recently been authorized to do additional lines of business in Massachusetts, will not write liability insurance in the Bay State, but is likely to do a personal accident, plate glass and burglary business. Like enough Obrien & Russell, who already represent the company for surety bonds, will be the representatives for its burglary branch in Boston. EMIL SCHWAB.

Rome and Turin Warned by Brussels

IN VIEW of the recent conflagration at the Brussels Exhibition it is interesting to read that drastic measures will prevail at the forthcoming Rome and Turin exhibitions of 1911 to prevent a similar occurrence there. These safeguards will be partly natural and partly mechanical. In the first place it is important to note that Rome is practically free from hurricanes of wind which beset the low-lying Belgian capital, and, therefore, from a source of powerful aggravation in the event of fire breaking out. Added to this natural

advantage, Rome has water in abundance at its command, there being in the Marcia, Paola and Vergine waters three separate adequate sources of supply, to say nothing of an auxiliary source in the form of a small lake in the neighborhood of the Exhibition grounds.

Signor Ventivegna, technical superintendent of exhibition buildings, assures timorous exhibitors that the water running through the Mannesmann steel pipes will be exclusively appropriated for fire purposes. This water is to be driven at a consistent pressure of fifteen atmospheres—or

213.30 pounds per square inch—by Diesel electric motors, so that in case of fire it will be possible to supply water jets with a reach of 500 feet. To manipulate these elaborate appliances a body of fully trained firemen will be in attendance. Valuable as these arrangements are for diminishing damage in the event of an actual outbreak of fire, the arrangements made for rendering the possibility of a conflagration as remote as possible are even more assuring. Separate buildings are to be the rule, and on each section powerful fire-extinguishing apparatus will be concentrated.

RIGHT NOW ——— WRITE NOW

LIVE ASSETS for LIVE AGENTS

Live, not Life Insurance, is the only necessity of life that has not increased in cost.

It is a great asset for a Live Agent to represent the largest health and accident insurance company in the world, especially at this time with compulsory workmen's insurance imminent and employers' liability insurance becoming costlier every day. Up-to-the-second policies. Most liberal contracts to agents.

LIFE UNDERWRITERS.

(Continued from Page 8.)

peg; Secretary, N. D. Sills, Sun Life of Canada, Richmond, Va.; Treasurer, Eli D. Weeks, Phoenix Mutual Life, Litchfield, Conn.

The members of the National Association of the Executive Committee of the Canadian body are: J. W. Whittington, Aetna, Los Angeles, and E. J. Clark, John Hancock, Baltimore.

Chicago won the 1911 convention practically without opposition, and a strong movement was started to have the convention in 1915 at San Francisco, the time of the Panama-Pacific Exposition.

Elbert Hubbard gave his views on life insurance at the morning session.

A most interesting exposition of life insurance methods and supervision by the state in Canada was given to the convention by the Hon. Sir George W. Ross, President of the Manufacturers' Life, of Toronto, and a member of the Canadian Senate.

The banquet was one of the most elaborate the association has held. Ex-President Whittington presided. Governor F. M. Warner made the address of welcome, and other speakers were George Elliott, D. D., of Detroit; Vice-President George T. Wilson, of the Equitable of New York; Charles Warren Pickell, manager of the Massachusetts Mutual at Detroit; President E. R. Machum, of the Canadian Association; William T. Gage, general agent Northwestern Mutual at Detroit.

BANK INSURANCE RULING.

That a national bank may not insure the life of its President or any of its officers has been decided by the Controller of the Currency. A request from a bank for permission to do so has brought out that ruling.

The decision is based on a case which officials discovered in the Northwest some time ago. A life insurance company acquired a string of national banks and insured all the employees. By that system the earnings of the banks went to the life insurance company to pay premiums on the policies on the lives of the employees.

OBITUARY.

Louis B. Lawton.

Louis B. Lawton died on September 7 in Morristown, N. J., at the home of his son, Dr. C. E. Lawton. He was 78 years old. For forty years he was connected with the Mutual Life Insurance Company of New York. For twenty-five years he was general agent for Ohio. The last fifteen years of his business life he was Assistant Actuary at the home office in New York. He retired ten years ago.

HOME OFFICE

Chalmers on Salesmen

HUGH CHALMERS, President of the Chalmers Motor Company, delivered an address last Friday before the convention of the National Association of Life Underwriters at Detroit upon "Employing, Training and Supervising Salesmen," in the course of which he said:

If I were asked to define salesmanship in the shortest possible way, I would say in a sentence that it is to make the other fellow feel as you do about the thing you have to sell. It is appealing to men's minds; it is changing men's minds to agree with your own. It is throwing thoughts at a man by which you hope to bring his mind into accord with yours on any subject. Every sale that was ever made, whether it was a paper of pins or a life insurance policy, didn't first take place on the order blank or application blank, or in the order book or check book, but the sale had first to take place in the mind of the man who made the purchase.

Now, life insurance comes under the head of difficult salesmanship, because you are selling something intangible; you are selling something that a man in most cases has to die to get the benefit of, and even then he doesn't get the benefit, but others do. So that I say the hardest kind of salesmanship is to convince a man to do something which doesn't always directly benefit him. It isn't like buying something tangible that he can see and feel. He is buying a piece of paper, of course, all properly engraved and sealed and all that sort of thing, but this piece of paper merely means a certificate of confidence that those dependent upon him will be taken care of after he is gone. Of course, I realize that certain forms of life insurance have many advantages

nowadays to the man while he is living, but I think most men look upon life insurance as a thing that becomes operative only after they are dead.

As I see it, an insurance salesman must do five things:

First—Get hold of his prospect.

Second—Convince him that as a general proposition life insurance is a good thing.

Third—Convince him that his company's policy is best for him.

Fourth—Get the order signed.

Fifth—See that the policy doesn't lapse at the end of the year.

I have noticed that most insurance men never send in a card, and they never as a rule send in a business card. Why? Because they believe they will not get an audience if they send in a card.

Somehow or other, men generally look upon insurance, even to-day, as not being a necessity, and of all the men they would rather not see it is the insurance man. People try to avoid him, and think they will be bored if they see him. Now to my mind, if the proper advertising was done, men would be made to see that insurance is not a luxury, and that the life insurance man is not a bore, but, on the other hand, that life insurance is a necessity and that a life insurance agent is a friend.

Most advertising copy of insurance companies that I have seen, speaks of the amount of assets and liabilities and the amount of insurance they wrote last year, how big their company is, and what dividends they pay, and all that sort of thing. To my mind the average man who buys insurance is not half as much interested at the start in knowing those things as some others. He is not as easy to approach that way as if you should approach him from his "point of con-

tact"—that is, that there is really no choice in this matter, it is not a question of whether or not he want life insurance—it is a question whether or not he will accept an absolute necessity. There is a difference between wanting a thing and needing a thing. Some men say they don't want insurance, or they don't want an adding machine, or something else, but that doesn't change the fact that they need these things. So there is a difference between wanting and needing things.

It seems to me that advertising can be written that will be so strong and so convincing in character that it will cause men to send for the life insurance man, because they will realize that it is more dangerous to be without life insurance than fire insurance and that far more serious consequences will result from neglect of life insurance than would result from neglect of fire insurance. A man's business might burn; and he could live to build another one, but if his life is gone everything is gone, and in most families when the head is gone the engine is gone, and while, of course, the personal loss is great in any event, yet the personal suffering is much greater where a man has not had the foresight to protect his family with life insurance.

NORTH BRITISH CHANGES IN WEST.

J. F. Joseph has been named by the North British and Mercantile to take charge of its Western department, with the title of general agent, and jurisdiction over Illinois, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Kansas, Oklahoma and Arkansas. George H. Bell has been placed at the head of the Central Department, with the title of general agent, and with jurisdiction over Ohio, Indiana, Michigan, Wisconsin, Minnesota, Kentucky and Tennessee.

ALONG LAKE MICHIGAN.

(Continued from Page 2.)

may desire to have its part written by its agents, who have lost the line to the broker, but the broker declines to permit that unless it suits him. He has arranged with certain of the company's agents about the writing on the line and will divide it among them as he sees fit. The company has nothing to do but accept the broker's terms or lose the business. When the broker has a risk which is not desirable, however, and companies are writing it as an accommodation his attitude is different. They can do some naming of terms then.

* * *

The banquet which the Illinois Pond of the Blue Goose tendered to the Grand Nest officers last year is to be followed on October 4 by one which promises to be even finer. It will be given at the Hotel La Salle on the night before the opening of the Northwestern meeting. The banquet committee, of which Carroll L. De Witt, general agent of the Newark Fire, is chairman, has secured as toastmaster A. R. Monroe, assistant Western manager of the Queen. The plates will cost \$5 this year. All members of the order are to be invited on the same basis as members of the Illinois Pond.

* * *

Completion of the programme for the coming meeting of the Fire Underwriters' Association of the North-West at Chicago shows that the field men will be treated well. Among the subjects that will be discussed by the speakers will be insurance law, electricity, fire waste and underwriting practices—subjects of prime interest to practical men in the field. Interest is added by the fact that this programme is very different from that of last year. Then there were many excellent addresses, but the subjects treated were almost without exception of a different character from those to be taken up at this meeting.

* * *

It is expected that after the Western Union meeting this week the various committees appointed to interview the agents of the "excepted cities" concerning the reduction of expenses will begin to get busy. It has been impossible to do anything so far on account of the vacation season.

* * *

Increased credits for the use of the coinsurance clause recently promulgated in the West are beginning to effect premium income. It is yet too early to say what the general effect will be, although field men report that in some cases a reduction in income already has resulted. It is probable that the effect will be different in different localities and agencies. Where assured already have had a coinsur-

ance clause attached to their policies a simple reduction in rates is effected. Where they have not the loss through lower rates may be made up by increased insurance to meet the requirements of coinsurance.

* * *

Some of the Kansas agents are expressing their disapproval of the organization of the Western Insurance Bureau on the ground that its members do not propose to pay more than a certain commission. Recently an Indiana newspaper voiced the indignant sentiments of agents over a letter sent out by a certain Pennsylvania company, not named, announcing a reduction in commissions. As agents are waking up to the fact that expense reduction is a live topic, such protests are being heard, although it is stated that not many agents are protesting directly to their companies.

While very little has been given out regarding what the Illinois Fire Insurance Commission will recommend, it has been stated by a member of the commission that it may recommend the enactment of law fixing a maximum expense ratio which may be incurred by companies operating in the State. It is known also that the commission has considered the advisability of providing for some sort of test of the fitness of agents to engage in the fire insurance business.

Should the question of expense reduction be handled along these lines, first requiring companies to economize, but leaving it to them to determine the lines of economy, and, second, the elimination of a large number of unfit agents and making it more difficult for such persons to get into the business in future, it is possible that the cost of insurance might be reduced without seriously effecting the income of the legitimate agents, although their commission scale might be reduced.

* * *

The Wisconsin Industrial Insurance Commission held hearings this week on what it has expressed hope would be its last tentative bill. The measure as it now stands is objected to both by employers and employees, but that is to be expected. The commission evidently thinks it has a good workmen's compensation bill, and this seems to be the opinion of many others who have gone into its fine points. Yet the bill contains enough loose and indefinite expressions, so it will take the courts some time to tell exactly what it means.

LA SALLE.

ANCHOR FIRE CHANGES.

A considerable interest in the Anchor Fire Insurance Company of Des Moines, Ia., has been acquired by M. H. Cohen, H. H. Folk, O. G. Chesley, W. S. Hazard, Jr. Messrs. Chesley and Hazard are associated in the general insurance business under the firm name of Hazard & Chesley.

Bardoe's Column

THE Consolidated Casualty Company of Louisville has been licensed to transact business in the State of Pennsylvania, and J. J. Sheridan, agency director of the company, has been spending the week in Pennsylvania making appointments to build up a strong agency plant in that State. The company is now doing business in Kentucky, Mississippi, Kansas and Pennsylvania, and plans to apply for entrance into Iowa and Tennessee shortly. Insurance Commissioner Darst recently visited Louisville, examined the company and praised its present management. The Consolidated will write industrial, accident and health policies.

* * *

The Ocean Accident and Guarantee Corporation (Ltd.) has purchased a good will and business of the Universal Plate Glass Insurance Company (Ltd.), of Sydney, N. S. W., and will carry on the business at the Ocean's head office for Australia at Sydney.

* * *

Upon the invitation of the American section of the International Permanent Committee of Social and Industrial Insurance, the conference of which has just closed at The Hague, it was voted to hold the next Congress in 1913 in the United States. Professor Charles R. Henderson, of the University of Chicago, was made Vice-President of the International Committee for the United States.

* * *

The New York Insurance Department is examining the Westchester Fire Insurance Company.

* * *

J. A. Kelsey, resident manager of the Aachen & Munich, and R. C.

Christopher, assistant manager of the Caledonian, have gone to the Pacific Coast on a trip.

* * *

The Pacific Coast Casualty Company has been licensed to transact casualty and surety business in the State of New Jersey. Its managers for the northern part of the State will be Whilden & Hancock, while the southern part of the State will be managed by Stokes & Packard, of Philadelphia.

* * *

State Senator J. Mayhew Wainwright, of Westchester, returned on Monday from London, where he has been studying European methods of dealing with men and women injured in the pursuit of their work. He fathered the new Employers' Liability law of this State.

* * *

A new mutual just beginning business at Quincy, Ill., is the third organized in the State within a couple of years by business men as a protest against stock company rates unsatisfactory to them. There is perhaps more justification for protest at Quincy than at Bloomington and Joliet, where the others were started, as Quincy has not been well treated by the companies. When there was a compact office there it was the place chosen for the trying out of several changes that caused complaint. More recently it has been the scene of probably more abuse of the relief rule than has any other point of equal importance in Illinois, causing rate inequalities that eventually always prove unsatisfactory.

* * *

Formal demand was made on Sat-

urday upon nine companies for the payment of \$127,000 accident insurance carried by Ira G. Rawn, President of the Monon Railroad. According to the verdict of the Coroner's jury, the railroad man came to his death in his home at Winnetka, Ill., from the bullet of a revolver held in his own hand. All the life insurance policies, aggregating \$43,000, have been paid except two policies in small companies for \$2,000 or \$3,000. In most cases the policies were paid within two days after proof of death.

The proofs of loss were sent to the various concerns in registered letters by F. B. Johnstone, of the law firm of Runnels, Burry & Johnstone, attorneys for the Rawn family.

Mrs. Rawn and other members of the family who were in the Winnetka residence the night of Mr. Rawn's death were included among the affiants, and in some cases the certificate of the clergyman who officiated at the funeral and a copy of the Coroner's jury's verdict were included.

T H E PROVIDENT LIFE AND TRUST COMPANY OF PHILADELPHIA

Insurance in Force, \$214,509,255.00
(Paid for Basis)Assets \$70,514,350.45
(Market Value, Dec. 31, 1909)Contingency Reserve . \$9,207,276.38
(Inclusive of Capital Stock, \$1,000,000.)

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bob's Remarks

THE high pressure zone extends from Chambers street to Twenty-third street. This service has now proven itself so valuable in actual operation that many offices have increased lines in the territory thus protected. Nevertheless, there are some companies, after the San Francisco disaster, that stopped writing on any kind of a risk below Twenty-third street—even to the Battery. In view of the excellent results attained thus far in handling fires, since the new system has been working it seems rather doubtful if such a drastic policy is wise.

It would appear that the old rule in New York, as far back as 1870, for twice the annual premium (for buildings) for three years, was about to be adopted by the Pacific Board of Fire Underwriters. At present the exchange charge in New York is two and a half times the yearly rate for a three-year policy.

The many friends of Chester M. Cloud, formerly of the American Fidelity, will be pleased to learn of his appointment as metropolitan representative of the Fidelity and Deposit Company of Baltimore. He will have charge of the company's new casualty department for this territory.

Secretary A. M. Thorburn, of the Sun Fire Office, who has been in Europe for several weeks, arrived home last Saturday. Noted for his wit and fund of good stories, a recent note of his to an American friend is worthy of quotation. It stated that "with your knowledge of French you would enjoy Switzerland."

One of the most important and aggressive general agents for liability insurance is Edwin B. Quackenbush. He represents the Ocean Accident and Guarantee Corporation (Ltd.), at 92 William street.

On Friday last the Executive Committee of the Fire Underwriters' Association met. Nothing particular was done and the meeting adjourned, to be called later in this month.

The Farmers' Fire Insurance Company, of York, Pa., advise their agents that the appointment of Mrs. Annie S. McConkey, widow of E. K. McConkey, to the office of Secretary and Treasurer, will not change the management of the company. The same executive and official force which has heretofore administered its affairs will be retained, and the same conservative policy will be pursued that has marked the successful history of the company since its foundation.

A special meeting of the Enterprise

Casualty Company of Delaware, with proposed head offices in Philadelphia, was held last week. It was suggested that the capital be increased from \$100,000 to \$1,000,000. As no quorum was present the meeting adjourned until September 29.

By one of the most progressive, bright and thoroughly well trained local underwriters, and, by the way, practical countermen of the street, it was suggested to me that a list of prominent risks in the metropolitan district with the names of the brokers placing the same, might be of interest to the readers of THE CHRONICLE. Upon his information I append a few, selected from his list. It shows at least what a strong hold the really reputable insurance brokerage element has upon the mercantile and even the financial world, and also the tremendous power it has for good or evil. The following is a short tabulation presented as a first instalment:

Weed & Kennedy—Stern Brothers, H. B. Claflin Company, O'Neill-Adams Company, James McCreery & Co., Mills & Gibb, Abraham & Strauss, Frederick Loeser & Co. Benedict & Benedict—James H. Dunham & Co., R. H. Macy & Co., Best & Co., Bloomingdale Brothers, John Wanamaker, Lord & Taylor, Aitken, Son & Co., Acker, Merrill & Condit, Calhoun, Robbins & Co., Arnold, Constable & Co., Starkweather & Shepley—A. A. Vantine & Co., W. & J. Sloane, I. Tanenbaum, Son & Co.—Simpson-Crawford Company, Siegel-Cooper Company, Henry Siegel's Fourteenth Street Store, Greenhut & Co., Hamlin & Co.—Gimbel Brothers, Emil Coletti & Co.—B. Altman & Co. H. Mosenthal & Son—Saks & Co.

Under date of September 10 (Circular No. 1,181 of the New York Fire Insurance Exchange) the names of fifty-seven brokers were quoted as having not renewed their certificates. Many of these, however, as is usual, will attend to renewal promptly, thus keeping the quota of about 8,000.

As foreshadowed in our issue of August 25, the old Greenwich Insurance Company has resumed business under date of September 12, with capital of \$200,000 and surplus of \$50,000.

New automobile floater rates are out, to take effect from and after October 1. The new table published is almost as complex and intricate as is that of the recent liability schedules.

Frank & DuBois have been appointed United States representatives of the Yorkshire Insurance Company for surplus lines.

BOB.

NOTEWORTHY ADVANCE.

The
BERKSHIRE LIFE
Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

INSURANCE CO., LTD.

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS\$13,885,802.88
LIABILITIES 8,766,622.58

SURPLUS\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of\$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

CASUALTY UNDERWRITERS IN SESSION

Prof. Irving Fisher of Yale Describes the Financial Bonanza He Sees Awaiting Companies Which Undertake to Conserve the Nation's Health---Arthur I. Vorys of Ohio Talks About the Tendency Towards Socialism

BRETTON WOODS, N. H.,
Sept. 22.—The twenty-third
convention of the Interna-
tional Association of Acci-
dent Underwriters began its sessions
in this place last Tuesday afternoon.
Nearly all the heads of liability com-
panies in the United States are in at-
tendance. Several of them made the
trip to the White Mountains in auto-
mobiles. President Alexander and
Secretary Betts, of the Continental
Casualty Company of Chicago, arrived
in Mr. Alexander's Panhard, making
the trip from Chicago in ninety-seven
hours.

Franklin J. Moore, United States
manager of the General Accident,
Perth, Scotland, left Philadelphia in
his Packard last Friday. At Trenton
he was arrested for not having a
New Jersey license, had to stay
over night and pay a \$50 fine in court
the next morning. In Larchmont at
6:30 o'clock Saturday evening, after
having been run into by an ice wagon,
he was arrested for not having his
lamp lighted. This time he was not
fined. About two miles out of Hart-
ford the rear axle of his car broke. He
came the rest of the way by train and
hopes the chauffeur will get here with
his baggage and linen before the ban-
quet to-night.

There was a meeting of the Exec-
utive Committee on Monday after-
noon, at which great satisfaction was
expressed because of the progress
made toward the elimination of policy
"frills" by the committee appointed
at the Albany meeting, of which Pres-
ident Dunham, of the Travelers, is
chairman. Within the next two

months still further progress is ex-
pected.

President Faxon's Address.

Walter C. Faxon, President of the
association and Vice-President of the
Aetna Life, delivered his formal ad-
dress on Tuesday afternoon. He said
in the main:

The Executive Committee will
doubtless report to you the special ef-
forts that have been made during the
past few weeks toward securing uni-
form action by the accident and
health companies in the modification
of their policy forms for 1911, elim-
inating therefrom some of the spe-
cial features which have encumbered
them and have been demonstrated to
be of doubtful value. The occasion
for taking this action at this time is
the necessity imposed upon all com-
panies doing business in New York
and Massachusetts to revise their pol-
icies so as to conform to the recently
enacted laws in those States.

It can truthfully be stated that
never before in the history of this
organization has so determined an
effort been made, or one which prom-
ised such satisfactory results, as this
recent attempt to reform policy con-
tracts. That certain obstacles have
interposed to delay—for a brief time
only, let us hope—the adoption of the
reforms, places a responsibility upon
the companies to make renewed ef-
forts toward bringing about the
greatly to be desired results.

Heretofore the difficulty in secur-
ing the elimination of any feature re-
garded as undesirable by many com-
panies has been that some one or two
companies have regarded the fea-
ture with favor and have prevented
unanimous action. Under the plan
proposed nearly every company was
called upon to forego the further

use of some features which it
favored. Never before has there been
greater willingness manifested by the
companies to sacrifice their individual
preferences.

The national convention of Insur-
ance Commissioners assembled at
Colorado Springs in August of last
year, adopted for recommendation to
the Legislatures of their respective
States a bill for standard provisions
in accident and health insurance pol-
icies, which bill, substantially as
adopted by the Commissioners, has
already been enacted into law by New
York and Massachusetts, and failed
of enactment in Ohio only by a mis-
hap of some sort. Minnesota had al-
ready a law upon its statute books
similar in many respects to this one.
During the coming winter we may
expect similar legislation will be en-
acted by many more of the States,
and, as occurred in New York State,
modifications may be proposed in
the language agreed upon which, if
embedded in the law, will defeat the
very object sought for by both the
companies and the Commissioners
working together for a long time—
namely, uniformity in the statutory
requirements concerning policy forms.

Professor Fisher on Health.

Following the usual reports of of-
ficers, Professor Fisher, of Yale, read
a paper on "Insurance Companies and
the Public Health," in the course of
which he said:

In the history of all forms of insur-
ance we find that at first the concep-
tion of insurance is restricted to the
one function of trading in risks—i. e.,
selling for a price (called the pre-
mium) the chance of receiving an in-
demnity (called the insurance). Later

(Continued on Page 8.)

Workmen's Accident Insurance in Austria and Hungary

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

VIENNA, Aug. 18, 1910.—Austria was the first country to follow in the footsteps of Germany in the matter of causing all accidents to wage-earners employed in industrial enterprises to be compensated, without regard to the negligence of either employer or employe. This, also, was done in Austria, as in Germany, not by holding the employer liable but by requiring him to insure. The system differs, however, from that in Germany as follows:

The Austrian accident insurance associations (with a few exceptions) do not confine their membership to a particular class of establishments, but embrace all employers within a certain territorial district.

The employers do not pay all the cost. They are permitted to deduct one-tenth of the premiums from the wages of the employes.

The management is not confided to the employers only. Both employers and employes are represented on the board, but the actual every-day conduct of the business is entrusted to government appointees.

The system also is not assessment. Nominally, it is "Kapital-Deckung"—i. e., a system under which each year's premiums are to provide for all claims arising by reason of accidents which occur that year, setting up a reserve for all future payments by reason of the same.

Practically, however, this is so far from having been realized that after over twenty years' operation only one out of the numerous district societies holds reserves equal to the requirements, and very few are near that status. Moreover, the associations which are in the worst condition are the largest and situated where the industries are densest.

The various district associations possess and exercise broad powers as to rates and the objection of both employers and employes to "useless accumulations" have made themselves felt. Yet, unlike German employers who have been taught to expect increasing rates, the Austrian employers object to covering past deficiencies even more strenuously than to adequate premiums now and for the future.

The bureaucratic management causes them to regard the district funds as merely branches of the Government, to which they should pay as little as possible and out of which they should get as much as possible. What the State is to do about it is not their affair, except that it must not expect them to pay money to make good the State's mistakes nor to pile up "useless" accumulations.

The Government, recognizing this situation, now proposes a modified German system—i. e., what is called an "average premium" system, under which there will be a relationship between current disbursements for claims and what the employers are called upon to pay. What is proposed by the Government is contained in a "project" and not having yet ripened into law or even a completely outlined bill, what it is to be is not very clear, but in general it may be explained as follows:

Under the pure assessment system, assuming for purposes of illustration that the number of workmen, their ages, their conditions as to health, marriage, number and ages of children, wages and the like, as well as the risk of accident, were all stable from year to year, an exact equilibrium

of annual cost of furnishing all the benefits would be reached when the youngest workman employed when the plan was put into effect, reached the highest attainable age. At and ever after that time the plan would embrace, all the conditions remaining unchanged, precisely the full and the same number of workmen with precisely the same wages, the number of disabled workmen (both partial and complete, both permanent and temporary), with precisely the same benefits, the number of widows (constantly recruited by accidental deaths of workmen and diminished by their own deaths and remarriages), with precisely the same benefits and the same number and ages of orphans (similarly recruited and diminished by their own deaths and by attaining their majority), with precisely the same benefits.

The current annual premiums thereafter (on these assumptions) would also be, it is possible to demonstrate mathematically, precisely the annual premiums which, on the basis of the funds earning no interest, it would be necessary to charge from the outset on the "kapital-deckung" or "claim-reserve" basis—that is, on a basis calling for reserves mathematically equivalent to all payments to be made in future because of accidents which have already taken place.

On the same assumptions, this equilibrium of annual disbursements to pay claims is also, of course, reached at the same time and thereafter maintained, even though premiums have been collected on the "kapital-deckung" or "claim-reserve" basis, and it is easily shown mathematically that thereafter (on these assumptions) the aggregate premiums, aggregate claims, aggregate reserves and aggregate interest earnings of the reserves (assuming also a stable rate of interest) are all stable and unvarying from year to year.

The aggregate advantage thereafter in annual premiums from year to year, therefore, to the employers if the "kapital-deckung" or "claim-reserve" system has been maintained over their subsequent annual premiums on the assessment plan is (on the same assumptions) precisely equal to the aggregate interest earnings of the reserves.

Now, if reserves have been accumulated, but not in an amount fully equivalent mathematically to the present value of future payments to be made because of accidents

which have already occurred, it is possible to go over to the assessment plan, applying the interest on the actual reserves toward meeting the payments, or accumulating such interest until about the time the equilibrium should be reached, and thereafter applying the interest earnings of the entire accumulation. It is also possible, of course, as an alternative, even to require some further overpayments for reserve purposes to be made, though not sufficient for "kapital-deckung."

The idea of all of this is to give a full equivalent for all accumulations of reserve while abandoning, in principle if not altogether, the "claim-reserve" plan.

Of course, these assumptions are never realized precisely or even approximately; the numbers of workmen increase or diminish, the risk of accident varies, longevity increases or diminishes, rates of marriage, remarriage and births vary, wages go up or down—yet it can readily be shown that the principle as regards attaining an equilibrium is unaffected and also that a substantial equilibrium, varying only within moderate limits, subject to melioration by improvements and to enlargement by retrogression (both of which are salutary) can and in the nature of things will be attained.

The foregoing gives by no means an accurate notion as to what is proposed in Austria. To do so would require too much space. It merely outlines the principle of the "average premium" idea which the Austrians have up for discussion. It also shows why they are not more frightened and disconsolate over the failure of the state insurance institutions actually to maintain their reserves under the "claim-reserve" system.

Two benefits which the Government hopes may flow from such a change are:

First—That Austria will not be required to make good the deficient reserves out of general taxes—a thing which many employers have fatuously been expecting it to do.

Second—That employers will come to understand that the claims, as they accrue, must be met by them and will be willing and ready so to meet them, though unwilling to pay in currently sufficient amounts to assure their being so met.

The fact that the institutions are essentially bureaucratic in management militates against the full realization of these hopes. It will be hard, perhaps, for employers to unlearn what they have learned—viz., to lean on the state and hold it responsible.

The same reason, bureaucratic management, instead of a management representative of the employers or of the employers and workmen, is assigned as an explanation of the facts that expenses of management are materially

higher than in Germany and that prevention is not so effectual.

Austria has, however, by reason of the universality of its system and of its statistics, developed the science of rating, so far as concerns published data at least, more completely than any other country. Its system has been adopted as a basis by most of the private companies, as in France, Belgium, etc., where private insurance is employed to cover the risks of employers under compensation laws.

Hungary, which is united with Austria by having a common king, has local self-government and a separate Parliament. Until relatively recently it was not much developed industrially, but it is now making immense strides. To its tardy development, industrially, is ascribed the nation's failure to adopt workmen's compensation legislation earlier than 1907, taking effect actually in 1909. But unquestionably the fact that the Austrian system did not realize all that had been expected of it, was not without influence.

To that, as well as to the Hungarian dislike of the "Germanism" of Austria, is also due, no doubt, the further fact that when enacted into law the Hungarian system has little resemblance to the Austrian. It is state insurance, both against sickness and accident, the state supervising the former and managing the latter, but it is purely assessment and makes no effort at "kapital-deckung" or the creation and maintenance of adequate "claim-reserves." In the early years rather large overpayments to constitute an emergency reserve against fluctuations are required, but they are not scientifically computed and are in no proper sense "claim-reserves."

It may be regarded a curious condition that, despite the Hungarian dislike of the "Germanism" of Austria, Hungary should have adopted a plan so closely modelled after the German. But there is little, if any, anti-Germany feeling in Hungary—though more than enough often in Austria itself; the Hungarian sentiment is not against Germany as a nation, but against the domination or attempted domination of Hungary by German-speaking Austrians.

The sixth chapter in the series of articles on "Employers' Liability Insurance Abroad," by Miles M. Dawson, is entitled "Employers' Liability Insurance in Switzerland," and will appear in THE CHRONICLE next week. The seventh chapter, "Workmen's Compensation Insurance in France," will appear in the issue of October 6.

Local Fire Agents Meet in Chicago

CHICAGO, Sept. 21.—The keynote of the fifteenth annual meeting of the National Association of Local Fire Insurance Agents held here last week was elimination from the business of the low-grade agents. Fire insurance expense came in for considerable attention, but suggestions for reduction generally were coupled with a provision that the legitimate agents be relieved of the competition of the hangers-on that take their bread and butter out of their mouths.

As was to be expected, the association's declaration of the commission question was guarded. In the organization are the Southern agents, who honestly believe they are being discriminated by the companies and want more commissions. There is the big body of Western agents, who, as a rule, desire no change. There also were a comparatively few "excepted cities" agents, who, while they may admit that the commissions paid by some companies in the large cities are excessive, are not ready for a reduction unless they get compensation in the way of reduction of multiple agencies. There was nothing in the proceedings to show that the agents have much confidence in the theory that a reduction in commissions would drive enough sidelines and others out of the field to compensate them for the reduction.

Considerable sentiment was expressed in favor of a standard of agency requirements which would exclude from the business the ignorant and incompetent and would require the inexperienced to serve an apprenticeship in other agencies before being given full agency powers.

O. B. Ryon, of Streator, Ill., who spoke as a local agent, but expressed views which he has acquired, in part at least, as attorney of the Illinois Fire Commission, went further into the present troubles than most of the other speakers did. While he was talking on the subject of State regulation of rates, he treated regulation on broad lines. He suggested to the agents that they first decide what classes of companies and concerns they desire to have admitted to their States and work for laws which would accomplish this result and also would put all the companies under supervision, including Lloyds, interinsurance concerns and the like. Then decide what kind of a people they desired to have represent these companies and seek legislation necessary to confine the business to such people's hands. Let the companies make the rates, but lodge in the Insurance Department power to grant relief to those who may be found to be suffering injustice from incorrect rates.

Let the States limit by law the expense ratio the companies may incur. This, he intimated, would quickly put a stop to the fierce competition for agents for many companies could not afford to go into small places where they could get only a very small volume of business. Mr. Ryon's general proposition was that there is no need of the company that does not fill an economic want—in other words, that there is no need of companies which will write only a few classes that other companies are perfectly ready to write and no need for numerous companies in small towns. He spoke with apparent sympathy of the English system, under which a few companies take immense lines on large risks and the smaller companies get their share through reinsurance, without the expense of running a big agency plant and duplicating the work of many other companies in this regard.

Quite a strong tendency is shown in the national association to draw lines between the sheep and the goats, not only among companies, but among agents as well. While it was recommended that companies be classified according to their strict adherence to the agency system or their readiness to deal with brokers of the cut-rate variety, the Executive Committee was also empowered to drop from membership agents who under the guise of seeking surplus line business, really are seeking business that agency companies could and would handle through cut-rate methods.

Arthur Hawxhurst, manager of the insurance department of Marshall Field & Co., addressed the meeting. One of his telling and effective utterances was the following:

"Competition is the life of trade, it is true, but indemnity is neither trade nor commerce. It has its own peculiar functions to perform for the protection of both, and these cannot be ignored by either.

"These functions become motive powers after a fire has taken place, for it is then that the piece of paper called an insurance policy turns itself into an asset equal to its face value, and as there is no telling when judgment day is to come it is essential, like all other salvations, that the policy be at all times worth its face value"

* * *

Hen. Thomas B. Love, former Insurance Commissioner of Texas, believes that the principle of State rate regulation has been adopted in Texas for keeps. Taking it for granted that rates ought to be stable and uniform, he says that either the companies must be permitted to make them or the people, represented by the State,

must do so, and he has no doubt as to what the sentiment of his State is on the subject.

While Mr. Love did not put it in this way, his proposition amounts to this: Either the companies, sellers of insurance, are to fix a price and say to prospective buyers, "Take it at our price or leave it alone," or the public, buyers of indemnity, will say to the sellers, "Here is the price we will pay; furnish insurance at that price or not, as you see fit." And the people of Texas, he says, are going to adopt the latter plan.

LA SALLE.

LIVERPOOL & LONDON

& GLOBE NOW LIMITED.

On the 26th ultimo an unusually important and interesting registration was effected at Somerset House. It was the completion of the design for the modernization and fuller equipment of one of our most honored and reputable insurance institutions. Founded under a deed of settlement in 1836, the Liverpool Fire and Life Insurance Company ten years later, on extending its operations to the metropolis, became the Liverpool and London Insurance Company. In 1864 it acquired the Globe Insurance Company (founded as far back as 1803), and thenceforth became known throughout the world as the Liverpool and London and Globe, or popularly as the L. and L. and G. On July 25, 1904, the company was registered as unlimited, pursuant to its special act of that year, and pursuant to the Liverpool and London and Globe Insurance Company's act of 1910 has now been reregistered as a limited company. In accordance with statutory requirements the advalorem duty of 58 per cent on the new nominal capital of £3,000,000 became payable, so that as large a registration fee as \$7,000 has again been paid by an insurance company.—London Post Mag.

ARTHUR E. CHILDS, President.

F. S. James New Western Union Head

FRONTENAC, N. Y., Sept. 16.—Fred S. James, of Chicago, one of the charter members of the Western Union and the Western manager of the National of Hartford, was elected President of the Western Union at the conclusion of its annual meeting yesterday. John H. Stoddart was elected Vice-President, and H. N. Kelsey, of the Sun of London, was chosen Secretary. The next session of the Union will be held at the New Willard in Washington next April.

The chief interest of the meeting lay in the discussions on sprinklered business and legislation. On sprinklered business it was decided to increase the force of inspectors and make more frequent inspections of equipped risks and those about to be equipped. It was held that this would more adequately meet the competition of the mutuals, and would also dispose of the internal competition among the companies maintaining equipped risk departments of their own, these being organized chiefly because of the desire for advance information.

The question of legislation was discussed at length, and the Union will follow out the recommendation of President Lenehan, and prepare itself to meet the demand for State regulation of rates.

An interesting feature of the meeting was the statement made by W. N. Johnson, of the Insurance Company of North America, on the present status of the clear space clause in Minnesota, which has been practically annulled by recent decisions of the Minnesota Supreme Court and rulings of the Insurance Department. It was recommended that the companies protect themselves by inserting in the description of the property on lumber policies a provision that it be located not less than 200 feet from any manufacturing risk.

It was decided that the Union rules were not applicable to marine and transportation policies, covering automobile floaters, and that the Union will not exercise any jurisdiction over commissions on automobile business.

The special Committee of Publicity and Education recommended that the work be continued and pushed more actively.

The report of the Governing Committee, presented by Walter Sage, chairman, recounted facts and conditions without comment.

The only resolution was one providing for a reduction in the charge for night work from 25 to 10 per cent, giving credit for the great improvements made on methods of lighting which are the chief hazard of night work.

No changes were made in the relief rules, but an increase in the number of applications was noted, due to better observance of the rules of members rather than increase in the competition.

Extensive reports were made on the work of the sprinkler and engineering departments, and it was recommended that the staffs of both be increased in order that there might be more frequent inspections to determine whether improvements promised were being made.

Special attention was called to the rapid increase in the public interest in the matter of the fire waste as the most encouraging feature of the situation. Many important organizations have taken the matter up and are urging their member to better fire protection and construction. The

members were recommended to keep in close touch with all such movements in order that the best results might be achieved. The Governing Committee report closed with a plea for better co-operation and greater confidence among members, who were advised not to be so ready to doubt the good faith and honest intentions of their associates.

The report of the Committee on Fire Protection Engineering said that marked improvements were being made in electrical inspections and that a better grade of talent was being developed for the inspection work. The assistance of the Association of Electrical Inspectors was acknowledged, and the work of the Underwriters' Laboratories commended. Most of the special and standing committees were given more time.

Chicago's New Fire Boat

DURING the convention of the National Association of Local Fire Insurance Agents, the Chicago Fire Department gave a complimentary exhibition of the Graeme-Stewart, its most modern fire boat. The Graeme-Stewart is 120 feet over all, 109 feet 6 inches between perpendiculars, and has a draft of 9 feet 6 inches. It is constructed of steel throughout, practically no wood being used, except for the finish of the deckhouse and pilot house. The arrangement of the machinery is novel, in that the same engines are used for operating the fire pumps and for propelling the vessel, thus doing away entirely with separate propelling engines. The boat is fitted with two centrifugal fire pumps, with 14-inch suction and discharge, and capable of delivering 9,000 gallons of water a minute at pressure of 150 pounds a square inch, when running at a speed of 1,700 revolutions a minute. By means of branch pipes, the discharge of one pump can be turned into the suction of the other, thereby running the pumps in tandem as one four-stage pump, delivering 4,500 gallons of water a minute at 300 pounds pressure. This, going through a 3½-inch nozzle, makes a tremendously powerful and effective stream. At 125 pounds pressure these pumps will each develop 5,500 gallons a minute. The pumps are set one on each side of the boat, drawing from a 14-inch header extending across the engine room, and delivering to turrets on the deck directly above. These turrets are set diagonally on deck and each has nine 3½-inch openings for hose, with quick-moving lever valves

at a convenient height. In winter these turrets will be inclosed in iron castings, to which steam pipes lead, to prevent freezing. Each pump is driven by a 600-horsepower turbine engine, which is directly connected with it on the same shaft and bed-plate. This shaft also carries a 200-kilowatt generator of the direct-current type, wound for 275 volts, for operating the propelling motors. There are two Scotch boilers in the boat, each 12 feet 6 inches in diameter, and 11 feet 6 inches long, built for a working pressure of 170 pounds.

Since the opening of the drainage canal there is a considerable current in certain portions of the Chicago River. In order, therefore, to hold the boat in a position where it can do effective work in fighting fires on the wharves and in buildings bordering on the river bank, where lines cannot be made fast to moor the boat, it is fitted up with "spuds" like a dredge, two forward and one aft, working through wells in the bottom of the boat and raised and lowered by steam power. These spuds are made of double thick steel pipe, 18 inches in diameter, shod with cast steel points to take hold of the river bottom.

The Chicago Fire Department fleet also includes the Joseph Medill, the Illinois, the Conway, the Swenic and the Chicago.

In New England

BOSTON, Sept. 21.—The interregnum is ended, and Boston again has a de facto Fire Commissioner, the Civil Service Commission having on Thursday last approved Mayor Fitzgerald's nomination of Charles D. Daly to that position. Mr. Daly is a Bostonian by birth. He entered Harvard in 1896 at the age of sixteen and became the star athlete of that university. In 1900 he was admitted to West Point, where he not only continued to gather athletic laurels, but was diligent in his studies as well. In 1905 he was graduated with the rank of second lieutenant, but a year later resigned from the army and returned to Boston to engage in business. His training, academic, military and athletic, forms an admirable groundwork for the productive exercise of his sterling qualities of character and intellect, and there is every reason to believe that he will make his mark as an efficient head of the Boston Fire Department, especially if the Mayor adheres to his reported determination to keep the department out of politics. This is a hard strain on the credulity of those who have watched the career of Sweetadeline Honeyfitz, but still there is every disposition to take him at his word and give him due credit for its fulfilment.

Professor Doten's Address.

The Massachusetts Commission appointed to study the workmen's compensation for injuries question is getting down to work in good earnest. The first public hearings on the matter have been set for next Thursday at 2 and 7:30 P. M., at the Boston State House; then there will be hearings at Lowell on October 7, at Worcester probably, on October 12, at Springfield October 14, at Pittsfield October 15, at Fall River October 27 and at New Bedford October 29. This takes in the important textile towns, and would seem to insure a wealth of suggestion toward the framing of the measure which the commission is to recommend to the Great and General Court.

Last Sunday Professor Carroll W. Doten, chief investigator for the commission, talked to the Central Labor Union on the topic of compensation for industrial accidents. He outlined the compensation plan recently adopted by Great Britain and the compulsory insurance plan prevailing in Germany, spoke of the differences of method and result that attach to these systems, and declared that both were worthy of the most careful consideration. Continuing, he said as follows, in part:

"The Massachusetts Commission is making a careful study of both of these systems as they operate in the

countries where they originated. It is also studying the modifications and possible improvements adopted in other countries.

"Twenty-six countries or self-governing colonies have laws more or less like one or the other of these models, and the Legislature of one State in the Union, New York, has recently passed a similar act.

"The commission is not committed to any special scheme or system, but it is striving to prepare the best form of a bill which the experience of other countries and the constitutional and economic conditions under which we live in Massachusetts render possible.

"It comes to you, not because you are members of labor organizations, but because you are citizens of Massachusetts and acquainted at first hand with its industries and its laws. The members of the Commission ask your co-operation in their investigations and in the framing of a bill for enactment at the next session of the General Court.

"I would call your especial attention to the following points which require careful consideration in the adoption of any scheme which may be devised:

"First—It must not be of such a character as to promote carelessness and malingering.

"Second—It should be so framed as to promote the prevention of accidents.

"Third—It should be so arranged as to eliminate lawsuits and the expenses of litigation.

"Fourth—It should be so designed as to promote better relations between employers and employees.

"Fifth—It should not interfere with the free movement of labor.

The programme, as outlined by Professor Doten, certainly rests on a basis of good sense, fairness and endeavor to promote the common weal with justice to all concerned, and its realization on these lines should command the support of an enlightened citizenship.

New England Brevities.

In consideration of a small additional premium the Aetna Life attaches a rider to its personal accident and health policies, giving double indemnities for injuries sustained in automobiles.

EMIL SCHWAB.

Bird Men and Policies

AMONG those notified that participation in aviation contests will result in the cancellation of their policies is Allen A. Ryan, chairman of the Committee of Arrangements of the international aviation meet at Belmont Park October 22 to 30. Mr. Ryan, who carries policies in life insurance and casualty companies aggregating \$500,000, has been formally notified that because of his connection with the international meet his policies will be cancelled.

Mr. Ryan does not own an aeroplane and does not contemplate the purchase of one; neither does he contemplate making a flight. His duties

as chairman of the Committee of Arrangements consist of attending to details of the meet. He is not even required to be on the field during the flights, but in spite of this he will be compelled to forfeit all his claims under the policies he holds if he continues to hold his present place.

This is the first instance where a person holding policies not actually flying has been barred from participation in aviation meets. Mr. Ryan was adverse to discussing the matter, but admitted that he had received notices from the companies in which he is insured, but declined to comment on what action he intended to take.

Promotions in Ohio

CHARLES C. LEMERT, Superintendent of the Ohio Insurance Department, makes the announcement that insurance companies organized by promoters at a cost exceeding 5 per cent of the money paid by stockholders will be excluded from the State of Ohio. His ruling is as follows:

"Numerous insurance companies are being organized in this and adjoining States. The stock of many such companies is being sold through promoters and soliciting agents who receive from 15 to 35 per cent of the amount contributed by the purchaser, which comes out of the amount so contributed, and does not go into the treasury of the company for its use and benefit. Such promotion expenses are exorbitant and fraudulent as to the purchaser unless he has knowledge of such expenses at or before the time of his subscription. At the annual meeting of the national convention of Insurance Commissioners, held at Colorado Springs in 1909, this department joined with thirty-seven other Commissioners in unanimously passing a resolution denouncing this practice and expressing the opinion that a company should not be licensed to transact insurance business if the expenses of its organization and of placing its stock exceeded 5 per cent of the total sum contributed by its stock-

holders. The resolution further stated:

"We believe that the promotion of insurance corporations on the plan of selling stock through soliciting agents is not due to or inspired by any desire on the part of the promoters to subserve the public welfare by providing needed insurance corporations for any locality or section, but that such promotions have been and are being made chiefly, if not altogether, for the purpose of enabling the promoters to reap rich harvests of profits from the sale of stock. We believe that there is no room for any profit to be legitimately derived from the organization of a new insurance corporation if its stock is sold upon such terms as that its purchase is a prudent investment, or one which would be made by a reasonably prudent man who fairly understood its nature and import."

"When it appears that the organizers of an insurance company seeking license in this State have been guilty of the acts and practices referred to and have expended in promotion expenses more than 5 per cent of the total sum contributed by stockholders this department will be justified in finding that the company is not sound and was conceived in fraud and will refuse license unless the subscription signed by the stockholder states the maximum amount of such expenses."

CASUALTY MEN MEET.

(Continued from Page 1.)

a second function is almost invariably added, that of reducing the risks. Such is the natural and inevitable order of development. At first we must take the risks just as we find them. But sooner or later we discover that risks are more or less preventable, and sooner or later it befalls that those insurance companies prosper most which practice prevention as well as indemnification. The addition of the preventing function at first aroused antagonism as all new ideas do. But it is bound to win wherever prevention is found to pay—which is probably everywhere that insurance applies. First one far-sighted company sees profits in prevention and then competition compels others to follow its example or withdraw entirely from the race.

Finally, health insurance, one of the youngest forms of insurance, has made a beginning in the field of prevention. Considering the fact that few, if any, of the existing insurance companies have been engaged in health insurance for more than fourteen years, their present entrance into the field of prevention is unusually prompt. Personally I believe that in health and accident insurance—and especially in health insurance—there are gigantic possibilities of profit. I use the term profit rather than philanthropy in recognition of the fact that insurance companies as such have no business to undertake philanthropic work except when it is profitable. In the end the money gains made by the insurance companies by reducing mortality and invalidity will be shared by the public in reduced premiums.

Bonanza for Underwriters.

My object in this paper is twofold: First, to show that the unexploited possibilities of improved safety and health constitute a veritable bonanza for insurance companies, and, second, to show some ways in which the insurance companies may begin in the work of exploiting this bonanza.

First, then, what room for improvement is there in the matter of American accidents and ill health? For answer I beg to refer you to my report on National Vitality to President Roosevelt on behalf of his National Conservation Commission. Such reference will save you the trouble of listening to an elaborate statistical argument. In the report referred to it is shown that human life in America could, by the adoption of hygienic reforms already known and entirely practicable, be lengthened over one-third—that is, over fifteen years. This calculation has been made very conservatively, and is probably several years inside the truth. The statistics and estimates on which it is based have been taken from published sources, as well as contributed by some score of American authorities—medical, actuarial and hygienic. It is estimated that at least eight years could be added to human life merely by securing reasonably pure air, water and milk.

Now, it is well known that mortal-

ity and invalidity are very intimately related. Farr attempted to establish a ratio between them. He calculated that for every death each year there was an average of two persons sick throughout the year. But whether or not we can establish a fixed ratio between deaths and invalidity no one will gainsay that they are sufficiently connected to enable us to reason from one to the other. In the absence of good invalidity statistics, mortality may, therefore, be accepted as a rough barometer of invalidity; and longevity as a rough barometer of vitality and health. We may, therefore, conclude that the possibility of adding fifteen years to human life carries with it the possibility of adding greatly to human health. If the ratio of disease to death be a fixed one, such extension of human life would reduce invalidity in the same ratio as it would reduce mortality—which would be, ultimately, about 2 per cent.

There is reason to suspect that the reduction in invalidity would be even more than the reduction in mortality. This may be reasonably inferred from one's general study of the prevention of disease and in particular from the fact that mortality is only preventable up to a certain point—for every one must die some time—whereas disease may perhaps in the millennium be abolished entirely. Pasteur said: "It is within the power of man to rid himself of every parasitic disease." And, if in the distant future disease shall be so much more preventable than death, it is probably more preventable at every stage of progress. We feel reasonably safe, therefore, in stating that every success attending our efforts to reduce mortality will be attended by at least equal success in reducing invalidity.

We now know that the death rate is not the fixed and fatalistic thing it was once supposed to be, but that on the contrary it varies according to many known conditions. * * *

The cost of conservation is often trifling in comparison with the saving attained. For instance, the hookworm disease in the South impairs the earning power of its workmen by 25 or 50 per cent. To restore this earning power costs, by curing this disease, on an average less than \$1 for each case. Other examples show that the return on investments in health are often several thousand per

cent per annum. Probably no such unexploited opportunity for rich returns exists in any other field of investment. Mr. Messenger, the actuary, suggests that if insurance companies should combine to contribute \$200,000 a year for the purpose of improving the public health, the cost would be one-eighth of one per cent of the premiums, and it would be reasonable to expect a decrease in death claims of much more than one per cent. Even this one per cent would make a profit of more than seven times the expense.

Actuaries' tables show that a reduction of one-third in mortality would

THE LEADING FIRE COMPANY OF THE WORLD

[of Liverpool,

England.]

A GREAT SIX MONTHS

We closed the first half of 1910 with a rousing increase in new business over our record for the first half of highly prosperous 1909.

In policies and dividends we have what the public wants. In literature and canvassing aids we have what the agent wants. And back of all is a reputation gained from 59 years of activity as a Massachusetts Company.

If you are a genuine producer, a *delivering* producer, and wish to join our forces, address

GEORGE D. LANG,

Superintendent of Agencies

**Massachusetts Mutual Life Insurance Company,
Springfield, Mass.**

Incorporated 1851

enable the premium to be reduced by over 15 per cent. * * *

An Unexploited Field.

The conclusion seems safe that here is a rich unexploited field for saving money. And the beauty of it is that these gains bring with them gains far more precious to the nation than dollars—immeasurable gains of longevity, vitality, efficiency and happiness. Life, health and accident insurance is not philanthropy, but it is a beneficent business. Though at first glance it might seem that to prevent the pollution of streams, to improve the milk supply, to obtain pure foods and freedom from accident is no part of the business of insurance, yet it is easy enough to see the very vital connection. By far the larger part of the cost of the insurance business is not management nor agent's fees, but the cost of mortality and invalidity. It is the right—if, in fact, it is not the duty—of any business to reduce its cost. To pare down salaries might not save the policyholder one per cent of his premium, but to reduce mortality cost might save him many per cent.

What, then, can accident and health insurance companies do toward the reduction of accidents and illness? They can follow the example of the Metropolitan, the New York Life, the Provident Life, the Loyal, and other companies, which have already blazed the way, and they can set their experts to study the problem with reference to devising still other methods. Their work of prevention like that of fire prevention can be classified under two heads—the work of prevention among their own policyholders in particular and the co-operation with public health agencies toward prevention in general. Fire insurance companies not only compel or induce their policyholders to take certain precautions against fire, but they act on the community, as a whole and stimulate it to provide a proper fire department, proper building laws, etc. In the same way the life insurance companies are now advocating that the Government take up the organization and co-ordination of public health service.

By arousing the Government of the United States, of the States and of municipalities to greater activity, the insurance companies would reap a large share of the benefit without incurring all the cost. In other words,

the insured lives would not have to carry the entire load, but could induce the taxpayer to do his share.

A Fourfold Suggestion.

To be specific, the insurance companies may act in the following ways:

First—By examination and correspondence they may give specific information or advice to individual policyholders.

Second—They may diffuse existing knowledge of hygiene—especially of personal hygiene—among their policyholders.

Third—By investigation they may discover the ultimate conditions for optimum vitality and safety. With the exception of the investigations of Metchnikoff, very little scientific work is now being done as to the factors of longevity.

Fourth—By resolutions and by personal representation, they may aid in the passage of laws and regulations for public health and safety, in city, state and nation, and in general co-operate with and give stimulus to all existing agencies for improving human vitality.

Were there time I should like to go into details in reference to each of these four suggestions. I will, however, confine myself to three specific suggestions to this association as an association. The first is that it appoint a committee consisting of those fitted to construct a workable and detailed scheme for the use of the companies constituting the association. The second is that the association shall by resolution put itself on record as favoring the establishment of a National Department of Health, and third that it authorize the appointment of one or more representatives to attend the future Congressional hearings on Public Health bills.

This is a commercial country, and Congress is influenced by the wishes and arguments of commercial organizations. As an offset to the commercial interest opposed to a Department of Health—the food adulterators and promoters of proprietary medicines—the support of life accident and health insurance companies has been and will be a strong influence.

President Taft and ex-President Roosevelt have favored a Bureau of Health, and both have reaffirmed this advocacy within a month. The medical profession, the Public Health As-

sociation, and associations of State and Territorial Boards of Health, scientific, philanthropic, labor and grange organizations, and the recent Conservation Congress have advocated the project. It is one of the burning questions of the day and made especially so by the opposition from the quacks and the quack interests. I trust that this association will join with other insurance organizations in the effort to secure a Department of Health worthy of the nation.

At yesterday's session of the convention Julian S. Eaton delivered an address on the "International Claim Association," and J. M. Parker, Jr., presented the report of the Committee on Standard Manual or Uniform Classification of Risks, while the report of the Committee on Tabulation of Statistics Regarding Health Insurance was made by Dr. R. S. Keelor.

Vorys Discusses Socialism.

Arthur I. Vorys, of the Ohio Bar, read a paper on "Some Symptoms and Aspects of the Tendency in Socialism," in the course of which he said:

The tendencies of the thoughts and feelings of the people are the shadows cast before coming events, and in considering whether the tendencies now are toward Socialism, it may be just as well to consider that term as defined in Webster's Dictionary, as follows:

"A theory of society which advocates a more precise, orderly and harmonious arrangement of the social relations of mankind than that which has hitherto prevailed."

That there are tendencies toward "socialism" as so defined, that there are evidences of unrest and discontent over existing conditions, only states what has always been true since the dawn of civilization. That these tendencies are growing and evidences increasing in number and magnitude in recent years, cannot be doubted by any one who has tarried long enough from the pursuit of his own affairs to consider what is happening about him.

The causes for the marked increase in discontent, the unrest and demand for change, are largely traceable to the tendency toward concentration so

OFFICERS:

GEORGE F. SEWARD, President.

Robert J. Hillas, V.-P. & Sec'y. Henry Crossley, Asst Sec'y.
Frank E. Law, 2d Asst Sec'y. George W. Allen, 3d Asst Sec'y.

marvellously developed in recent years—say the last decade. In the minds of many persons it marks the transition from the age of competition to the age of monopoly.

The tendency toward centralization, aggregations, trusts and combinations is embracing all fields of industrial and commercial enterprise. Aggrandizement in some fields inspire, provoke or compel organizations in others. While, of course, every one still wants competition in every business except the one in which he is engaged, that "competition is the life of trade" is regarded as an exploded fiction in one's own business. Now, it is broadly asserted, and with much show of reason, that combination has saved the life of trade from the destruction of competition.

But whatever may have been and are the causes, whether justifiable or specious, we realize that the good old days of the small, local shops and stores, competing for local trade, are rapidly going. In their stead are the great aggregations of capital and workers, material and machinery, supplying all over the country the demands once filled by local shops and factories. It is this change from the small individual to the great corporate owner, producer and dealer—a transformation so rapid, yet so enormous, we can scarcely realize it—that gives occasion for the increased murmurings of discontent, more insistent protests against conditions, a universal grouch among the masses of the people, and a feeling more or less vague, undefined and unintelligent that in the evolution there is not a square deal.

Paternalism and bureaucracy, if not necessary, certainly are not desired. Undoubtedly competition is the ideal regulator, and if it persisted and prevailed in all industrial and commercial affairs, little or no government or state interference would be needed for the protection of the people. But as competition is stifled by combination, concentration and monopoly, society will and should protect itself against the abuses and evils sure to result where one has power to impose upon another. Supervising bureaus and commissions furnish the natural, the most effective and least harmful means of that kind of protection.

Doctors, lawyers and school teachers—and there are others—recogniz-

ing the wholesome benefit to the public and to themselves as a class, not only favor public bureaus for their own regulation and for the protection of society at large and each individual member, but they generally have been authors in the establishment and intelligent, efficient development of the bureaus regulating them.

What is the difference, then, for instance, between the medical profession and the business of insurance, that in one instance there is aid, encouragement and leadership in promoting bureaus of regulation, and in the other, if not protest and hostility, not encouragement, certainly not leadership? Are not the different attitudes of the different callings and enterprises and businesses toward the respective systems of regulation due to the fact that in some instances if abuses were not first discovered, regulation was first advocated and was inspired by those who should be or are under regulation, and in other instances regulation was forced in invitum, the demand being first made against the business by those who had suffered from abuses of some engaged in it, and that demand urged against the opposition of substantially all engaged in the business?

Through systems of regulation wrongs may be prevented and redresses worked out in a way that may prevent more drastic, violent and revolutionary reparation by an indignant people, aroused and inflamed over unchecked abuses and oppression by unrestrained arbitrary power. Why, then, should not those engaged in insurance realize that a policy of regulation should pervade all of our affairs?

In its last analysis, the institution of insurance is itself an evidence of the socialistic disposition of humanity, for its purpose is to restore the deprivations of misfortune from the supposedly full purses of those who have not suffered a like misfortune. Those who are managing insurance are doing the highly important and very responsible, but still only the incidental, work of collecting from the many to pay the losses of the few. There is some analogy between the premium payer—the fund producer—and the factory worker and the farmer, and between the loss claimant and the consumer of the products of the factory and farm. Why should not those engaged in managing insurance

be the first to recognize, announce and advocate the regulation of their institution so essential now in the promotion of all industrial and commercial affairs? Why should they not realize the importance, not only to the public but to themselves, of maintaining, in reputation and in fact, the highest possible standards of efficiency, the elimination of abuses and expulsion of all who are not in the struggle for the highest efficiency? This association and every one of like nature is evidence of that realization. Its purpose is not only for the mutual benefit of its members, but for the benefit of all their patrons. No one is admitted to membership, certainly no one should be admitted, if suspected of dealing unfairly with the people or otherwise unworthy.

As our economical conditions and relations change let insurance keep pace with the changes, and those managing it proposing and urging new measures of law and department rules to provide for changed conditions as they constantly occur. Then, when the managers of insurance appear to oppose any proposed reforms their opposition would be regarded as never before, surely meritorious and not because the institution of insurance instinctively opposes all new regulating laws and rules, regardless of merits. Under such encouragement and leadership, with the intelligent thought of those versed in the business, sincerely bent on aiding and not thwarting new wholesome regulations, the imagination can scarcely picture the improvement, not only in effective regulation, but in the respect for the department and confidence in the companies.

The convention will listen this morning to a paper on "Federal Supervision: Is It Feasible Without an Amendment to a Constitution?" by James C. Jones, of the St. Louis Bar. The delegates also expect an address on "Insurance Laws of the District of Columbia," from Senator Morgan G. Bulkeley, of Connecticut, and an address on "Diseases Resulting from Accidents," by Dr. C. H. Harbaugh, medical director of the American Assurance Company, of Philadelphia.

The programme for to-morrow includes addresses by Edson S. Lott, President of the United States Casualty; Chester N. Farr, Jr., of Philadelphia, and William B. Smith, counsel of the Travelers of Hartford.

INSURANCE IN KWANTUNG.

In transmitting a translation of regulations relating to insurance business in the Kwantung Province, which is on file in the Bureau of Manufactures, T. J. O'Brien, American Minister at Tokio, reports that a Japanese or foreign insurance company licensed in Japan may establish an agency in the Kwantung Province by reporting the matter to the Japanese authorities concerned. Funds are advanced at low rates to Japanese settlers in Manchuria by the Yokohama Specie Bank, which requires insurance on buildings as security.

J. C. BERGSTRESSER, EDITOR AND PUBLISHER, DEAD.

James Calvin Bergstresser, editor and proprietor of the "Insurance World," died on Sunday night. Since January he had been in poor health as a result of cancer of the throat. In June, in search of relief he went to Europe, where he underwent two operations at the Augusta Victoria Hospital in Berlin. He returned to this country late last month in greatly weakened condition and was under treatment first at St. Luke's Hospital in New York and later at Fountain Springs Hospital, Fountain Springs, Pa., where he died.

Born at Elysburg, Pa., on July 15, 1851, of old Pennsylvania family, Mr. Bergstresser obtained his early education in the country schoolhouses of Montour County, and later went to Lafayette College, from which he graduated in 1871. In the meantime he had studied law and was admitted to the bar in Northumberland County. Then he took up the work of a civil engineer in railroad construction work, to which he devoted two years.

In 1874 Mr. Bergstresser established the "Insurance World," which was first published at Philadelphia for about six months, when headquarters were moved to Pittsburg, where it has since been maintained. Up until 1900 the "Insurance World" was published monthly. In 1900 it went upon a weekly basis. From the time of its establishment until his demise he had been its editor and since 1875 its sole proprietor.

Mr. Bergstresser was a member of the Pennsylvania Society, Sons of the American Revolution, the Duquesne

Club of Pittsburg, and a charter member of Ascalon Commandery, Knights Templar, created in 1881.

He is survived by a brother, Samuel E. Bergstresser, of Mount Carmel, Pa. J. L. Bergstresser, manager of "Insurance World," is a nephew.

OBITUARY.

Theodore M. Banta.

Theodore M. Banta, who retired from the cashiership of the New York Life Insurance Company several months ago, after having been employed in the company for more than half a century, died last Saturday at his home in Glen Brook, Conn., at the age of 76. His health had been failing for the last year. He was born in this city and was the son of Albert Zabriskie Banta. He was educated in the College of the City of New York and entered the actuarial department of the New York Life in 1858 and became cashier in 1864. He was one of this city's Municipal Civil Service Commissioners in 1902-'03. He was a member of the Huguenot, Holland and many other historical societies and belonged to the National Arts and the Arkwright clubs.

Marshall S. Driggs.

The sudden death of Marshall S. Driggs, for twenty-one years President of the Williamsburg City Fire Insurance Company, at his Summer home in New Canaan, Conn., September 14, came as a distinct shock not only to the insurance world, but to his many friends and associates in financial and social circles. His many splendid qualities as fire under-

writer, financier, speaker at meetings of the New York Board of Fire Underwriters and the Fire Insurance Exchange and all round sound business man made for him a reputation for ability in almost every walk of life second to but few. A special meeting of the New York Board of Fire Underwriters was held on Friday, at which suitable action was taken and extended remarks made on the life, character and work of Mr. Driggs. Born in 1834, Mr. Driggs entered the service of the Williamsburg City Fire as a policy clerk in 1853, later he became Assistant Secretary of the company, and in 1889 succeeded his father as its President, so continuing until the time of his death. Mr. Driggs was Treasurer of the National Board of Fire Underwriters and a former President of the New York Board of Fire Underwriters. He was long interested in casualty insurance, as well as fire insurance, and was prominent in the directorates of the National Surety, Empire State Surety and the Casualty Company of America.

Jacob M. Neuburger.

Jacob M. Neuburger, for many years the Western manager of the Atlas of London, died from heart disease at his home in Chicago on Sunday morning. The funeral took place under Masonic auspices at Laporte, Ind., on Tuesday. Mr. Neuburger retired as Western manager of the Atlas on January 1, 1909, being succeeded by George E. Haas, who had been his assistant. He was born at St. Louis on July 4, 1840, and became a local agent at Laporte, Ind., in 1870. The following year he entered the field, representing the Imperial of London, and being special agent of the German-American from 1873 until 1891, when he became Western manager of the Atlas.

American Life Convention at Des Moines

DES MOINES, Ia., Sept. 21.—Those who have been connected with the American Life Convention since its organization regard the meeting which closed here last Saturday as the best ever held by the association. Sixty-four companies are now members of the convention and forty-six of these were represented by delegates at this meeting. In addition ten other companies were represented by visiting delegates, the latter for the most

part being young or small companies which eventually will be eligible to membership in the convention.

But it was not alone the attendance which made this a good meeting. There is a feeling among the members that the convention is getting down to "brass tacks," that its aims are becoming more clearly defined and that greater efficiency in carrying out those aims is developing.

One listening to the proceedings might easily have mistaken the convention at times for an organization of the old line companies of the East. There was denunciation of companies organized purely as promotion enterprises, and two or three of the speakers brought up the question of the expense of the business and the feasibility of securing an agreement on the limitation of commissions. To be sure, a resolution looking to a canvass of members to learn their views on the commission question with the idea of taking action, failed to receive sufficient support to get it before the open sessions of the meeting. Yet it received considerable support and the opposition was due partly to the belief that the proper place for considering it was in executive session. It is evident, however, that the expense question is receiving serious attention from the members, and some of them apparently are now ready for statutory limitation, though perhaps not on the lines of the New York laws.

One of the best discussions was on the subject of legislation. L. A. Dean, general counsel of the State Life of Rome, Ga., read a paper on the benefits of uniform legislation and the subjects on which such legislation should be encouraged by the life companies. His arguments to prove the desirability of uniform legislation were perhaps unnecessary, though they were forceful and well presented. He singled out over a dozen subjects on which it would be especially desirable to have uniform laws in the

States, but advised against taking up more than three of them at once, and in a motion finally named taxation as the one subject which should be taken up first.

Supplementing Mr. Dean's paper, Hope Thompson, President of the Northern Life of Illinois, discussed the best methods for securing uniform legislation. Quoting from a speech by Commissioner Hartigan, of Minnesota, he pointed out the chief obstacles which had blocked efforts in the past. He recommended a legislative programme to be agreed upon by the Association of Life Insurance Presidents, the National Convention of Insurance Commissioners and the American Life Convention, and then the combined efforts of these three organizations to carry it through.

The medical men presented some valuable papers, that of Dr. Armand Ravold, medical director of the Missouri State Life, on "The Short Life History" creating special interest.

The actuarial side again discussed the permanent disability risk, which received so much attention at last year's meeting. The main paper was presented by Lucius McAdam, Actuary of the United States Annuity and Life. Starting with a discussion of the reserves necessary for the total disability clause attached to the life insurance contracts, the debate drifted into a legal one on the advisability of the use of this clause at all, and, if it is advisable, in what form. Guilford A. Deitch, of Indiana, whose long experience as an insurance lawyer, especially as the attorney of accident companies, enabled him to speak with authority on litigation arising from disability claims, pointed out the grave danger of using a loosely drawn disability clause, which may involve the companies in lawsuits over fraudulent claims and over others, not fraudulent, but arising from honest difference of opinion, in which the companies are likely to be worsted.

The purely legal discussion was on the attitude of the courts toward insurance companies. While the reviews of decisions by the lawyers holding opposite views were interesting, the discussion was not of great practical value, except as a warning to companies to exercise great care in drawing their policy contracts and in selection of agents who will not involve them in legal difficulties.

The Greater Des Moines Committee gave the visitors an automobile ride over the city, the four leading Des Moines life companies gave them a dinner at the Country Club, and Mrs. L. C. Rawson, Vice-President of the Des Moines Life, gave the ladies a reception and matinee party.

Bardoe's Column

THE London and Lancashire Fire Insurance Company of Liverpool is about ready to enter the casualty field here through the medium of the London and Lancashire Guarantee and Accident Company of Canada, which is a subsidiary institution of the London and Lancashire Fire. The entry of the London and Lancashire Guarantee and Accident of Canada will be consummated as soon as the necessary formalities are complied with. This company has its head office in Toronto and began business in July, 1908, with an authorized capital of \$500,000. While the arrangements regarding its business here have not yet been completed, it is stated that at the outset the company will confine its operations to personal accident and plate glass risks.

* * *

Supreme Court Justice Whitney refused the application of William Henry Hall for permission to sue the State Department of Insurance and Superintendent Hotchkiss on transactions arising out of the trouble over the affairs of the People's Mutual Life Insurance Association and League of Syracuse. Hall held a promissory note of John A. Tevis, who deposited \$150,000 of Canadian money in a Syracuse bank with which to purchase the company. Hall said Lieutenant-Governor Horace White paid out all but \$18,000 of this money and that the State Insurance Department seized the rest. He tried to attach \$13,500 which he said was still left in a Syracuse bank, but asserted that the Sheriff of Onondaga County had failed to execute process. Justice Whitney advised Hall to lay his grievance before the courts in Albany or Onondaga County.

* * *

The Poughkeepsie jury which had the case of Lewis H. Vail, President of the Dutchess Fire Insurance Company, charged with forgery in the

third degree, reported early last Saturday morning that it was unable to agree and was dismissed. It stood six for acquittal and six for conviction.

* * *

The directors of the National Surety Company have declared the usual quarterly dividend of 2 per cent and an extra dividend of 4 per cent, making 10 per cent thus far this year. This is on the increased capital which was effected last Fall. It is now understood that the directors of the National Surety are preparing to further increase the capital of the company by the issue of additional stock.

* * *

Beyond doubt the writing of surplus lines, which for a while was rather taking a back seat, is now rapidly coming to the front again. The enormous growth of this country, together with the inability of authorized and admitted companies to carry the increased insurable values, has brought about a demand for strong and reputable surplus line writing companies. One of the most representative firms of United States attorneys and general agents for this class of business is that of the John L. Dudley, Jr., Co. This concern represents more than half a dozen English companies. The Dudley Company also negotiate and effect treaties with British, American and Continental companies.

* * *

From the report of the Worcester (Mass.) Protective Department for the year ended June 1 last, it appears that the total insurance loss sustained in that city during that period aggravated \$451,015, with insurance involved to the amount of \$4,298,396.

* * *

John J. Downey, general agent of the Massachusetts Fire and Marine, has gone West for the purpose of arranging for the admission of the company into Ohio, Indiana, Illinois, Missouri, Michigan and Wisconsin.

TO CHECK FIRE WASTE.

"Conservation of Utilized Resources from Destruction by Fire" was the subject of the address at the St. Paul (Minn.) convention September 5 to 9 by the special committee of the National Board of Fire Underwriters. The address of the committee covered the ground in a masterly manner, and we append a few of the important points dwelt upon:

"We believe that unless there is an intelligent development and utilization of our natural resources the comfort, prosperity and happiness of future generations will be seriously impaired, and we are in hearty accord with all legislation having for its object the preservation from destruction of nature's gifts and man's handiwork.

"The address which this committee presented to the joint conservation conference sought to set forth some very important facts concerning the excessive fire waste which persists in the United States and suggested remedial measures, which we still firmly believe, if adopted, would materially diminish the grievous loss of life and the tremendous and unnecessary destruction of created values by fire. We, therefore, beg to reaffirm these suggestions at this time.

"We have persistently endeavored to influence the introduction of improved and safe methods of building construction, to encourage the adoption of better fire protective measures to secure efficient organization and equipment of fire departments, with adequate and improved water systems, and to have adopted rules regulating the storage and handling of explosives and inflammable products; and we contend that successful efforts along these lines will very largely lessen the fire waste of the utilized resources, the destruction of which at the rate of over \$216,000,000 annually (1900-09 inclusive) is one of the greatest drains upon our natural resources and one which can be corrected, if the nation, state, city and citizen will co-operate along the lines indicated above."

Marquette Building, CHICAGO, ILL.

National Gets Shawnee

TOPEKA, Kan., Sept. 21.—The Shawnee Fire Insurance Company, of this city, has reinsured its outstanding risks in the National Fire Insurance Company of Hartford and will discontinue business. General Agent Fred S. James, of the National, has been in town for several days consummating the matter, and has arranged to take over desirable special agents and several members of the Shawnee. Sumner Ballard was the intermediary in the negotiations of the reinsurance. The Shawnee's unearned premium fund is approximately \$1,400,000, or about \$500,000 more than the sum given in its last annual statement.

The deal gives the National of Hartford a particularly large and choice business in Kansas and Oklahoma. The reinsurance has been approved by Insurance Commissioner Barnes of Kansas. The Shawnee has notified the Insurance Commissioners of Minnesota and Virginia of the reinsurance

and has terminated the examination which has been in process for those States under the direction of S. Herbert Wolfe. Manager James W. Going will retire from the fire insurance business.

The Shawnee Fire was organized in October, 1895, taking over the business of the Kansas Farmers' Fire Insurance Company of Abilene, a mutual company. In 1906 the capital of the Shawnee was increased from \$100,000 to \$200,000 and additional surplus of \$100,000 paid in. The officers of the company are Jacob Mulvanc, President; James W. Going, Vice-President and Manager, and H. S. Morgan, Secretary. In its last annual statement to the New York Insurance Department the Shawnee showed total assets on December 31, 1909, of \$1,460,457, of which \$656,075 was invested in mortgage loans, \$442,546 in bonds and stocks and \$223,884 represented agents' balances on business written after October 1, 1909.

Here and There

JAMES O'Kane, who has been connected with the Western Department of Aetna Fire for 45 years, and has been its cashier for 43 years, retires from its service on September 22. In recognition of this long service he has just received from the office and field force of the Aetna a handsome silver service, suitably inscribed. The presentation address was made by E. W. Brownell, general adjuster for the company, who recently completed fifty years of service with it. Mr. O'Kane will return to his old home in Cincinnati.

* * *

The General Fire Assurance Company of Paris, France, of which Fred S. James & Co. are United States managers, has been admitted to Indiana and appointed Fieber & Reilly its agents at Indianapolis.

* * *

The Eastern Union meeting yesterday developed considerable discussion of the situation and resulted in the decision to appoint a committee of seven to consider the proposition for a change in the commission rule. The committee, which is yet to be named, is to report as soon as possible and not later than October 20.

* * *

Howard C. Forbes has resigned as manager of the accident department of the Aetna Indemnity Company to become managing underwriter of the casualty department of the Alabama Fidelity and Casualty Company of Montgomery, which will have a cap-

ital stock of \$300,000, and plans to operate only in the South.

* * *

At the close of the convention of the agents of the Empire State Surety Company in the city last week a handsome loving cup was presented to President William M. Tomlins, Jr.

* * *

Under the new law requiring the Insurance Department to apply for a receiver for all assessment companies which are more than three months behind in the payment of death claims, the Illinois Department has given notice that it would seek a receiver for the Illinois Grand Lodge of the Ancient Order of United Workmen. The officers of the order have made a protest to the Governor, who has requested a postponement pending the submission of briefs. The Ancient Order of United Workmen officers admit that they are behind \$98,000 in payment of death claims, but insist that the order has ample funds.

* * *

The license of the Citizens Fire of Seattle, Wash., a mutual company started in 1900, has been revoked.

* * *

The eighth chapter in the series of articles on "Employers' Liability Insurance Abroad," by Miles M. Dawson, is entitled "The Insurance of Employers in Belgium" and will appear in THE CHRONICLE in its issue of October 13. The ninth chapter, "The Peculiar Accident Insurance System of Holland," will appear in the issue of October 20.

Delayed Fire Alarm Victim Sued Telephone Company

THE Supreme Court of Iowa, in a case wherein the plaintiff whose building was burned sought to hold a telephone company liable because he was obliged to wait ten or twelve minutes before he could get a connection to send in an alarm, took occasion to look into many prior decisions along the same line, and ruled that in this case the destruction of the plaintiff's building and machinery was not the direct approximate result of the negligence of the telephone company to provide proper connection, and that defendant was not liable for the loss sustained.

The case was Volquardsen versus the Iowa Telephone Company, and was brought under two sections of the Iowa statutes, one of which provides that a telephone or telegraph company shall be held liable for an unreasonable delay in the transmission of messages, and the other declaring that in an action against a telephone company for damages negligence on the part of the telephone company shall be presumed on proof of unreasonable delay in furnishing a proper connection within reasonable time, the burden being on the defendant to establish by a preponderance of evidence that the delay was not due to its negligence.

The facts showed that the plaintiff was awakened at 1:30 A. M. and found his factory on fire. He went to the telephone and tried to call "Central," but no one responded, although he worked the receiver for nine or ten minutes. Then he handed the receiver to his wife and she got the operator in one or two minutes. The plaintiff, after his failure to get the connection, started for a fire station

four blocks away to give the alarm, but met the hose company on the way, the department having been called by a neighbor. The firemen were on the scene a minute and a half thereafter, but the fire was then beyond control. No proof was furnished at the trial as to the time when the fire got beyond control, nor whether intervening acts might not have prevented the firemen from saving the building had they been warned of the fire at the time.

Referring to decisions in other actions for damages due to fire, the Court says that in *Metallic Manufacturing Company vs. Railway* (109 Mass. 277, 12 Am. Rep. 689) the plaintiff's manufacturing plant took fire and the hose was extended across defendant's track and connected with a hydrant. A freight train came along, and, though duly warned, carelessly ran over the hose and injured it so that it could not be repaired seasonably, and the plant was consumed. The defendant was held liable.

The Court mentions many cases that have followed the rule laid down in the above, and states that in *Kiernan vs. Met. Const. Co.* (170 Mass. 378, 49 N. E. 648) the defendant interfered with the use of a hydrant by firemen, delaying the connection of the hose so that the plaintiff's house was destroyed, when but for such interference probably the house would have been saved. In that case the Court in holding the defendant liable said:

"Though there was no obligation upon the city to extinguish the fire, it does not follow that the plaintiff was not deprived of anything to which she had a legal right if the defendant

obstructed the firemen in getting water from the hydrant. She has a legal right to have the firemen get water if they choose to do so from a supply especially provided for that purpose, and while its obstruction may not have been a crime * * * it was a tortious and wrongful interference with persons engaged in putting out the fire."

In the telephone case the Court concludes:

"In these cases stress is laid on the circumstances that though the firemen or city may not be under legal obligation to extinguish the fire, they were actually engaged therein, and but for the direct interference with the hose or hydrant would have extinguished the fire. It seems unnecessary to elaborate on the distinction between these cases and that at bar, between direct interference with the work of extinguishing fire actually in progress, and the negligent omission of being instrumental in procuring such work to be done by others."

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Bob's Remarks

ELIJAH R. KENNEDY returned from his trip to Wisconsin rugged and browned up. A large portion of his time was given up to outdoor life and golf. But one of the principal objects of his journey was to meet his associates of the "Mates of Milwaukee High School and Milwaukee University" which occurred early in this month. The call for the meeting was issued by Mr. Kennedy as "The Discoverer of the Milwaukee Schoolboy."

W. Peele Dawson, of the Alliance of London, now in Central America attending to the reorganization of the company's departments, is expected to stop over in this city on his way back to London. Nothing will be done as to the entrance of the Alliance into this country until his return home.

The Royal Exchange Assurance Corporation has issued the following notice: "All holders of unexpired fire insurance policies in the Cosmopolitan Fire Insurance Company can forward same to the Royal Exchange Assurance Corporation, 92 William Street, New York, and have them indorsed as follows if desired: 'The liability of the Cosmopolitan Fire Insurance Company of New York under this policy has been assumed by contract reinsurance with the Royal Exchange Assurance of London from December 31, 1908, at noon, subject in all respects to the terms and conditions of the policy.'"

In Bulletin No. 35 of the Department of Insurance, Bismarck, N. D., September 1 the names of over 130 fire insurance agents were quoted as licensed in the month of August. Some forty life agents were also in the list, besides about twenty-seven for casualty and other kinds of indemnity companies.

According to recent action of the directors of the Security Insurance Company of New Haven its capital stock will be increased to \$700,000 by the issuance of \$200,000 new stock at \$50 a share (par \$25), \$200,000 thus being added to the surplus.

Continuing my series of prominent risks in the metropolitan district with the names of brokers placing the same, I add the following:

Henry Honig & Son—Rothenburg & Co., Ehrlich Brothers. A Haubold & Son—Tiffany & Co. Starkweather & Shepley—Hackett, Carhart & Co. Bagot & Co.—Rogers, Peet & Co. H. F. Poggenburg & Co.—H. C. F. Koch & Co., Rusch & Co. Dutcher & Edmister—Smith, Gray & Co. Benedict & Benedict—Schefer, Schramm &

Vogel, Abraham & Strauss. Hamlin & Co.—Einstein, Wolff & Co. Willard S. Brown & Co.—Park & Tilford, Leshner, Whitman & Co. F. W. Stillman Company—Spielman & Co. Henry Withington, Jr.—John Daniell, Sons & Sons. Johnson & Higgins—Acker, Merrill & Condit. Weed & Kennedy—Calhoun, Robbins & Co., James H. Dunham & Co.

The following decision by the Court of Appeals of the State of Georgia may be of interest: "No contract of insurance on property situated in this State, no matter whether the transaction of insurance is made in this State or elsewhere, is enforceable in this State unless the insurer, when the policy was written, was duly licensed to do business in this State. Premiums alleged to be due on such unauthorized policy contracts are not collectible in the courts of this State."

Albert F. Richards, local secretary of the Hamburg-Bremen Fire Insurance Company, who has been abroad for several months, has returned. He looks well and hearty and will probably resume his former official duties with the company shortly.

Joseph F. Fessenden has been appointed special agent for New England of the Milwaukee Mechanics', the appointment taking effect to-day.

Circular 157, co-operation slip, of the New York Fire Insurance Exchange, cautions members regarding the effort to place in this city at less than tariff rates the property of the Piedmont Oil and Refining Company of Faunsdale, Ala. Members are requested to correct or cancel policies issued at cut rates. The tariff is on Plant 162½, on Cotton Gin 4.25.

WORKINGMEN'S INSURANCE IN EUROPEAN COUNTRIES.

"Workingmen's Insurance in Europe," by Lee K. Frankel and Miles M. Dawson, with the co-operation of Louis I. Dublin, has just been published under the Russell Sage Foundation by the Charities Publication Committee, in this city. It contains nineteen chapters and appendices. The chapters include detailed descriptive matter in regard to Great Britain and the Continental nations on "Insurance Against Industrial Accidents," "Insurance Against Sickness and Death," "Insurance Against Invalidity and Old Age," "Insurance Against Unemployment" and "Complete Insurance Systems." The volume also contains a summary of laws, institutions and administration of "Workingmen's Insurance Systems in Europe."

COMMISSIONERS ASSEMBLE AT MOBILE

Hotchkiss of New York Summarizes the Effects of the Armstrong Legislation in his Address to the Official Heads of the Insurance Departments of the Other States.

MOBILE, Ala., Sept. 28.—At the opening of the National Convention of Insurance Commissioners here a report presented by Insurance Commissioner Barry of Michigan, declaring for the flat and contingent plan of commissions for fire insurance agents throughout the country has been unanimously approved. No scale was suggested in the report, but the sentiment generally favors $12\frac{1}{2}$ per cent flat commission and $12\frac{1}{2}$ per cent contingent on profits, although some want 10 per cent flat and 15 per cent contingent.

This action coincides with the recent declaration of the National Association of Local Fire Insurance Agents at Chicago this month, which protested against the variations in different sections, the Commissioners holding that this rate should be uniform all over the country regardless of the size of community.

The companies have foreseen this movement, and at a conference held in Chicago this Summer decided that expenses should be reduced and appointed a committee to prepare a plan. The local agents this month gave the subject careful attention, and urged readjustment as between sections, holding that the 15 per cent scale in the South and some parts of the East would not justify any reduction. In the meantime the Continental has refused to join the new Fire Underwriters' Association in the East unless a contingent commission plan is adopted such as has now been indorsed by the State officials.

The special Committee on Fire Insurance Expenses was appointed last year, following a campaign begun by Insurance Commissioner McGivney, of Louisiana. Chairman Barry's committee took testimony this Spring in Chicago and New York and secured statistics from the companies. Its report held that the present system of agency compensation was grossly erroneous in that it invariably made for increased expenses and increased fire waste. It declared that brokers should be paid by the persons and firms in whose interest they work, instead of by insurance companies, and concluded as follows:

"We therefore recommend the substitution by uniform company action

if possible, but if not possible, then by statute, of a system by which local agents shall be compensated by a flat commission and a further commission contingent upon the profits of their respective agencies, the rate of flat and contingent commission to be uniform throughout the country."

The convention began its sessions yesterday morning with nearly forty States represented. Commissioner Hartigan, of the Minnesota Department, in his address as President of the convention, argued that insurance supervision was much more effective than the State supervision of any other form of business activity at the present time.

F. H. McMaster, of South Carolina, read a paper on the "Uniformity in Rulings and How to Secure Them," urging that the Commissioners secure greater discretionary power and exchange information on principles rather than on details.

The fraternal situation is being fought out to-night by the full committee, with indications that the compromise agreed upon between the fraternal factions will be approved by the Commissioners.

COMMISSIONER HARTIGAN'S ADDRESS

JOHAN A. Hartigan, Commissioner of the Minnesota Department, delivered the President's annual address before the National Convention of Insurance Commissioners at its forty-first meeting at Mobile on Tuesday. He said in part:

Effective supervision means co-operation of all the departments to secure the same end. This co-operation is being rapidly secured through the National Convention of Insurance Commissioners. Before there can be co-operation in administration, there must be unity of opinion and uniformity of requirement. Unity of opinion can only come from full and free discussion and a submission

by all to the best judgment of the majority. Let a commissioner act ever so wisely, if he is not in harmony with the general plan of supervision his work will be largely obstructive. Apparently the best method of procedure is the one recently adopted—to refer important matters to committees, who discuss these matters at length with the interests to be affected, and are then in a position to recommend action that is sane, conservative and effective. The advance in State control of insurance, as I see it, is to come through a greater degree of co-operation between the different departments. If any commissioner have unusual or peculiar views on any sub-

ject they will be modified by the experience and criticism of the others. In the consensus of opinion must lie wisdom.

It is the fashion and custom in some quarters to criticise State supervision. It is said that some things have been done which have been unwise, which have unsettled business conditions and have restricted the action of the companies without corresponding benefits to the people.

Let us admit that legislation has sometimes been hasty and ill-considered; that departments have occasionally looked at the merits of some particular case instead of taking the broad view necessary for the ultimate good of the business. Shall we judge of State supervision by these exceptional cases, or shall we consider what it has accomplished as a whole, recognizing the general desire back of all these efforts to remedy defects and to correct faulty conditions? Mistakes have been made in the supervision and regulation of other activities; legislative enactments controlling other lines of business are not always perfect. Laws are enacted which, after a test, are found unsatisfactory and their repeal required. All legislation is a growth and, like other growths, it must be pruned and trained before it reaches perfection.

Many of the vicious laws on our statute books are due solely to the activities of the insurance companies who have selfishly sought to gain advantage over their competitors. Such are the retaliatory laws which can, I believe, in every instance be traced directly to the desires of the home companies for such laws.

Some problems have been solved; others are in process of solution; some remain untouched. Among the recent achievements are the standard provision law for life insurance policies; a similar law controlling the conditions of health and accident policies; an anti-rebate law applying to all forms of insurance; the taking over by the department of insolvent companies and associations, eliminating the exorbitant expenses of receiverships; and I expect, as a result of the work of one of our most efficient committees during the past year and the action of this convention, the general enactment of a law governing fraternal societies which will enable these associations to establish themselves firmly and fulfill not only the immense obligations which they have at present, but those which they may hereafter assume.

State supervision and regulation of insurance are more effective than is Government regulation of any other line of business. Supervision of the banking business more nearly approaches it than does any other, and the attention of departments is often called to its perfection, and yet during the year 1908 the amount involved in bank failures in this country reached a total of \$127,544,943, a sum vastly greater than that involved in the failures of insurance companies. No old line life insurance company, working continuously under legal reserve laws subject to the test of departmental reserve calculations, has failed in a generation. A short time ago a bank at Biddeford, Maine, failed

owing to losses and misrepresentations covering a period of twenty-five years, and these losses were not discovered through inspection but through failure of the bank. These facts are not quoted as a criticism of bank supervision, but to show that it is not as efficient as is that of insurance. The solvency of a legal reserve life insurance company would be questioned by any live department years before it failed to pay its claims.

The State has for years required the life companies to charge adequate rates and thus guard against failures, receiverships and consequent loss to the public. The departments have urged the same course upon other classes of companies and societies, both by fostering legislation to that end and by constant public agitation of the subject.

Compare for an instant the record of the insurance companies with that of the railroads. Every receivership or reorganization of a railroad has resulted in the road emerging from such receivership with increased financial obligations. The stockholders have eventually profited by this course, as the public had to pay dividends upon the increased capitalization.

The reorganization of an insurance company results in a decrease of capital or an increase of surplus at the expense of the stockholders only. The only recent case where the reserves of a legal reserve life insurance company were impaired, was corrected by the mere suspension of business upon the order of the department.

While the companies are hampered by the lack of uniformity in the insurance laws of the different States, there is not so great a diversity in these laws as in the laws covering other subjects; for example, in the

criminal law, the laws governing divorce, and, in fact, practically every other subject. But the diversity of the law is more noticeable in insurance on account of its being such an important factor of every-day business. This convention has labored long and diligently to bring about practical uniformity, and what uniformity exists is due to it.

State supervision of insurance has come on account of a demand from the people to correct abuses. Its power and scope have been extended for the same reason. To what extent it will ultimately go depends on the attitude and the management of the insurance companies. It will not go, as a whole, further than is needed. Some view the advance with apprehension, exclaiming that it is now approaching government insurance. It may more closely approach that goal and it may even reach it. If under government insurance the people will be more fully protected and at a lower cost, then the public need not view the situation with alarm. The things that are working most strongly now for government insurance are the improper business methods of some insurance companies—high expense ratio and a feeling that the public is not in all cases receiving an equivalent for the sums paid in premiums. The sure avoidance of excessive paternalism in insurance lies in the companies doing more for the individual than the State can do. The constantly increasing and varying needs of the public for insurance must be supplied and supplied on the basis of a reasonable element for expense. When competition increases the benefits and lowers the cost it is welcome; when it increases the cost only, it should be restricted.

SUPERINTENDENT HOTCHKISS AT MOBILE

“SAVINGS in Life Insurance by the Limitations on Expenses Prescribed by the New York Law” was the title of the address delivered by Supt. Hotchkiss of the New York State Department, at Mobile. He said in the main:

How much, theoretically, ought an average life insurance company to spend each year? What, in the United States, is the just ratio between expenses and premiums?

It is not proposed to attempt a definite answer to this question, but rather to give some facts that may be helpful toward that answer. The experience of New York under the limitation laws of 1906, particularly section ninety-seven, is now of but three years. The statistics of these years, however, suggest certain deductions that may point toward the truth.

At the outset, the writer admits that the problem is one of many factors; he is willing to let the experts wrangle over the relative importance of those factors. He is conscious, too, that company executives and actuaries have for years pushed this question aside, for the reason—shall he say it?—that they feared the truth might up-

set their agency forces. And he is not unmindful of Pope's famous characterization of those who rush in where angels fear to tread!

But there must somewhere be the means whereby shall be fixed the ratio by which government may determine, how much, in the economy of things, its citizens should spend that they may have life insurance. Above such ratio any expenditure is economic waste—no matter who carries the burden.

The case of Germany seems to furnish figures based on a sufficient number of similar factors. Its reports show the percentage to be much the same from year to year. Thus from 1897 to 1905 the total expenses of German life insurance companies consumed from 13.5 per cent to 14.5 per cent of the total premiums received, the gross amount of the latter being about one-fourth of those paid to American companies during the same period. The percentage remained approximately constant, the average for the nine years, 1897 to 1905, being 13.9. During the same period, with 1906 excluded, the percentage in the United States, including industrial

(Continued on Page 6.)

EMPLOYERS' LIABILITY INSURANCE IN SWITZERLAND

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

BERNE, Switzerland, Aug. 26, 1910.—Switzerland is the only country of Europe, aside from Turkey, Greece, and the group of small nations lately subject to Turkey, which still has the liability of employers based upon the negligence principle, as in the United States. The reason, originally, for tardiness in this regard was the same as in our country—viz., that it seemed to be a matter which, under the Constitution, could only be dealt with by the cantons—i. e., the “states,” as distinguished from the Swiss Republic.

This could not forever hold back the modernization of Swiss legislation, however; and, accordingly, several years ago the constitution was in this regard amended, and a mandate has been given to the Republic to enact national legislation upon this subject, of the compensation or social insurance type.

Before this mandate was given, however, the Swiss Parliament proceeded to go as far in the direction of liberality toward workmen and their dependents, in applying the principles of the negligence theory, as the utmost stretching of that theory would allow. Thus they made the employer liable unless he could show that the accident was due to the employe's negligence, and, even in that case, if the employer was also negligent, the damages would be apportioned, instead of no award being made. Such a modification not merely throws the burden of proof upon the employer, the mere accident being presumptive proof that he has been negligent and therefore is liable, but also eliminates two of the most important defences—viz., the “fellow servant” rule, which in the United States releases the employer if the accident is due to the negligence of a co-employe, and the rule of “assumption of the risk,” which in the United States releases the employer if the accident is due to a usual risk of the occupation or even an unusual risk if known to the employe who, notwithstanding, continued to work.

These changes, together with the comparative negligence apportionment when there has been contributory negligence, are such as would undoubtedly alarm conservative American insurance companies and employers. Yet two things are noteworthy:

First, that while employers very generally insure, and in private stock companies at that, they much more frequently do so under “collective” policies, covering all accidents, instead of merely their liability, which indicates that both employers and employes desire something more.

Second, that a mandate has been given the Republic by a large majority of the cantons since the liberalization of the negligence laws, that legislation be enacted on the compensation principle.

Under this mandate a complete system of compensation and insurance was some years ago sought to be put into force by means of a bill which passed both houses of Parliament almost without a dissenting vote. A referendum was notwithstanding called for and it was defeated at the polls by a very considerable majority.

This measure provided for covering all accidents, occurring in the course of and arising out of the employment,

without regard to negligence. Employers were required to insure, with free choice of any licensed company, against their direct liability which accrues after a certain number of weeks of disability and in all cases of accidental death; and both employers and employes were required to contribute toward the cost of sickness insurance, as to which there was also free choice among “recognized” societies—i. e., societies found by the state to be solvent.

The last-mentioned feature which was expected to be popular, proved to be the rock upon which the good ship foundered. The “friendly societies,” of which there are many in Switzerland, like their American kinsmen, the fraternal beneficiary societies, did not propose to be brought up to the state's notion of solvency and adequacy of premium rates. Such, to the minds of their members, meant, in plain German, French, Italian and Romanish (for each of these languages is official in some of the cantons) “higher rates”—i. e., more to pay to obtain the same benefits. Accordingly, their members voted down the bill.

The mandate to enact suitable workmen's compensation or insurance legislation yet remained, however, and has not been recalled.

In this quarter-century of development of liability laws, based upon the negligence principle, stock insurance companies, covering the liability of employers and also issuing collective insurance policies, have thriven. They have done splendid work also, and the excellence of these Swiss companies is recognized throughout Continental Europe, in nearly every country of which that is open for the operations of private insurance companies in the field of employers' liability or workmen's compensation insurance, they are doing a good, safe, reasonably profitable business on conservative underwriting lines at a low rate of management and field expense, and are carrying ample and well invested reserves.

Their soundness and good management were also fully recognized in the bill which was defeated upon referendum, in which insurance, while compulsory, was with free choice among licensed companies.

Yet in the new bill which is now near to pass Parliament, compulsory state insurance is provided for, which would, of course, wipe out all the Swiss business of the private companies.

The new bill, the main lines of which have been agreed upon and which is now being further amended in minor respects, provides for:

1. Compensation for all accidents, whether in the course of the employment or not and up to 80 per cent of the wages, both of these features going beyond the provisions in any other country.

2. Compulsory insurance. (a) Covering the earlier weeks of disability by reason of accident, in sickness insurance societies, with free choice among approved societies which are not required to maintain full commercial solvency, as if on a purely voluntary basis, except as to “claim reserves” for accident cases. (b) Covering later weeks of accident disability and widows' and orphans' pensions for accidental death in a fund managed and guaranteed by the state.

Both employers and employees are to contribute—employees an amount estimated to be sufficient to cover the non-occupation claims—and the state is also to contribute a fixed portion of the cost out of funds raised by general taxation.

Three things are troubling the Government in framing this legislation—which has passed one house and is being amended in the other. They are:

1. The task of appeasing "friendly societies" and their members, who, even under the modified provisions, are incredulous that the proposed "solvency" requirements do not mean needlessly greater cost to the members.

2. The danger that workmen will be unwilling to be taxed, even indirectly, by the employers making a deduction from their wages as a condition to employment and also even though all they pay is for accidents other than occupation and for sickness.

3. The opposition of the stock companies, their managers, employees, shareholders and agents, and of employers who are pleased with their service and prefer to have freedom to choose their own companies.

The last-mentioned objection might not weigh so much if it were proposed to adopt the German assessment system, which starts at a very low annual cost and slowly increases. But, instead, the proposal is to use the "Kapital-Deckung" method and to set up adequate "claim reserves" as in the Rigsversikeringsanstalt of Norway. This means high premiums from the outset, big accumulations—which the insured employers persist in deeming unnecessary—and the creation of a great, new investment bureau in the state government. Switzerland is a country of multifarious direct taxes and the imposition of a new one is not popular. It is also a democratic country,

the oldest existing republic, and its people are always suspicious that each new public office may become a source of private graft.

All this renders it very probable that the bill will be sent to a referendum, which results if a relatively small number of voters petition for it, and it is extremely uncertain that it will be approved by the voters. The fact that Norway's successful state insurance on the "Kapital-Deckung" basis is scarcely known in Switzerland, while the failure and virtual abandonment of that plan in Austria are well known, will hardly improve the bill's chances. The nearness to Switzerland of German employers operating under the system in that country may also have their influence.

Of the three elements of opposition the supporters of the measure assert that the companies and those interested in private insurance or for any reason favoring it will not have much strength in case the "friendly societies" and their members can be pacified and the measure shall please the workmen themselves, instead of antagonize them.

N. Y. Casualty Report

WILLIAM H. HOTCHKISS, Superintendent of Insurance, made public on Monday Volume III of the Annual Department Report, covering the business of casualty, fidelity and surety, credit, real estate title and mortgage guarantee companies for the year ending December 31 last.

This report carries the audited statement of these com-

THE BEST PAID HARD WORK IN THE WORLD

Life Underwriting has been described as "The Best Paid Hard Work in the World" and consequently one of the most remunerative vocations in which anyone without capital can engage.

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES

has several openings for men who possess organizing ability and who can work up a business from territory at present inadequately developed. Plenty of hard work and commensurate remuneration to those who possess the necessary qualifications.

New York

panies and accompanying statistical tables, fixing the valuation of their stock and bond holdings in accordance with the allowed appraisal of the department, as arrived at by its expert, thus placing the valuations of said holdings on a uniform basis. In auditing these statements the department has gone into great detail as to the valuation and allowance of any items claimed therein as salvages.

This report indicates that the department's audit of the companies' statements has in many instances materially changed the figures as published in the preliminary tables issued in pamphlet form by the department in April last, when for the early information of the public the returns of the companies were published without audit.

Four general casualty insurance companies of other States were authorized by the department during 1909, and the license of one was revoked.

Table I of the report gives the assets of the Casualty, Fidelity, Surety and Credit Insurance companies doing business in this State on December 31, 1909. The total admitted assets were \$117,818,570.15, an increase over 1908 of \$12,076,118.56. Of this amount the New York State companies (15) had \$36,401,178.14, an increase of \$2,933,059.02; companies of other States and countries (39) had \$81,417,392.01, an increase of \$9,143,059.54 over the previous year.

Table II gives the liabilities of these companies. Excluding capital, the figures are: New York companies, \$17,933,003.26; companies of other States and countries, \$44,116,465.60, an aggregate of \$62,049,468.86. The total amount of capital was \$26,179,225, divided as follows: New York State companies, \$8,164,400; companies of other States and countries, \$18,014,825.

Table III gives the character and sources of the income for the year, the aggregate being \$90,945,023.57. Fifty-two companies received \$19,842,065.38 more than they disbursed, and two companies disbursed \$338,755.59 more than they received. The net excess of income over disbursements being \$19,453,309.79. The total premium income for 1908 was \$65,034,588.63; for 1909, \$84,118,226.73.

Table IV shows the disbursements itemized and in gross, the total amount being \$71,491,713.78, an increase of \$5,986,504.08 over the preceding year.

The following is an abstract of the statements, as tabulated, rendered by the Casualty, Fidelity, Surety and Credit companies for the year 1909, compared with similar companies for 1908:

	1908.	1909.
Number of companies.....	50	54
Assets	\$105,742,452	\$117,818,570
Unearned premiums	\$30,986,683	\$34,970,472
All other liabilities.....	23,463,524	27,078,997
Total liabilities	\$54,450,207	\$62,049,469
Capital stock	\$24,981,000	\$26,179,225
Surplus	26,311,245	29,589,876
Premiums	\$65,034,589	\$84,118,227
All other receipts.....	6,556,283	6,826,797
Total income	\$71,590,872	\$90,945,024
Claims paid	\$24,737,649	\$26,422,262
Dividends to stockholders.....	2,302,074	3,005,066
Expenses	38,465,397	42,064,386
Total disbursements	\$65,505,120	\$71,491,714

Bardoe's Column

THE Ohio National Life Insurance Company, of Cincinnati, a newly organized concern, has received its Ohio license from Insurance Commissioner Lemert. The company will also make application in Kentucky, Indiana and Illinois for licenses. The recent agitation in Ohio in connection with the organization of insurance companies has made it necessary for a new company to come before the department with extremely clean hands before a license will be issued. Insurance Commissioner Lemert issued a statement the other day that licenses will not be granted to companies organizing on a basis of great expense, and the payment of excessive commissions to promoters. The Ohio National has deposited \$300,000 worth of Ohio municipal bonds with the State Insurance Department. The capital of the company is \$500,000 and the surplus \$500,000.

A London insurance company has decided that it will try to get some business from the men who are promoting the All-Star series of baseball games, according to a telegram which has been received in Cincinnati by the promoters of the scheme to take two teams from the major league on a tour this fall, including New York players. The company agrees to insure the players, indemnify the owners of the National and American League clubs, and named a price

which is considered very low. The promoter says that he will have the men insured that they may return to their clubs next year, unless they wish to join his league, which will probably be in operation at that time.

Judge Ward, in the United States Circuit Court last week, fixed to-morrow at 11 o'clock in the morning as the time, and Room 124 in the Federal Building as the place at which exceptions to the supplemental report of Edward S. Rapallo, the special master in the case of the Mutual Reserve Life Insurance Company, will be heard. The order was granted on the court's own motion and is for the purpose of expediting the hearing, so that a distribution of the funds may be made to the parties entitled thereto. The receivers are directed to notify the solicitors of all parties, including the solicitors of the interveners of all exceptants.

The examination by the New York Insurance Department into the affairs of the New York Safety Reserve Fund, a co-operative assessment concern, disclosed that its statement to the department as of December 31, 1909, was correct except the following items: "The society neglected to carry either as an income or disbursement the first premium paid by the policyholders on all policies written during 1909, all of which premiums are paid as a commission to agents,

By making this correction the cost of management is increased from 34.6 per cent to 35.8 per cent. The society took credit as a non-ledger asset for \$12,000, which is the gross amount of the uncollected premiums, not over thirty days due. This asset should be reduced by \$3,000 due agents for commissions, or an item for that amount should be carried in the statement as a liability. The society did not carry a liability for salaries or bills and accounts due or accrued. These items amounted to \$930.05 Dec. 31, 1909."

* * *

The refusal of the New York bankers to guarantee cotton bills in accordance with the demand of English and Continental bankers, is being followed by bids at low rates on the part of American surety companies for the business of giving the further guarantee which is demanded of the banks on this side, but which they refuse to give because of legal restriction. It was said yesterday that the charge of the surety companies might not amount to more than five cents a bale.

COMMISSIONERS AT MOBILE.

(Continued from Page 2.)

business, fell from 29 per cent in 1897 to 25.3 per cent in 1906. Concededly, the American percentage, due to high pressure methods now admitted, and full weight being given to the factor of a business which increased in volume here more rapidly than in Germany, was in 1906 too high, perhaps much too high. Statistics drawn from the recent reports to the New York department appear to demonstrate this. Indeed, while the range is a wide one, I venture to suggest that the normal percentage, which represents what we Americans as a mass ought to pay for life insurance—giving weight, of course, to American standards of living, earnings and expenditures—cannot justly, under a system of quasi-public corporations, vary greatly from between 15 and 20 per cent of the premiums. Against any expenditure above this latter figure, policyholders, again, as a mass, seem to have the right to protest. Indeed, it may be that in present conditions they may well insist, in an average company writing an average proportion of new business, on a percentage somewhere between sixteen and eighteen.

These observations are, however, only by way of introduction. The New York investigation of 1905 emphasized two classes of expenditures as conducing largely to the unsatis-

factory conditions in life insurance—managerial waste (salaries, office buildings, syndicates, political contributions, lobbying expenses and the like), and agency waste (excessive commissions, principally on the first year's premiums, rebates, expense allowances, prizes, bonuses, rewards, and the other accompaniments of forced-draft methods). Of the two, the second was both the more important and much the more difficult of treatment.

The result was legislation which some have called sumptuary, but which surely was summary. The companies had shown themselves unable or unwilling to grapple with the problem. The system's principal beneficiaries—the field force itself—could scarcely be expected to do so. Natural laws, so long as the companies were struggling one with the other after the bubble bigness, seemed to increase rather than diminish the expenditure. And the Legislature stepped in! It is not the province of this paper to discuss whether the State should thus have interfered. The statistics of the first three years seem, however, fully to justify the action taken. Insurance is now being furnished those who wish it at a ratio of expense to premium for all companies doing business in New York of 17.3 per cent, as against 22.9 per cent six years ago.

In a report to the New York Department made in 1909, its auditor stated:

"It is clearly an advantage to society that a company should be permitted to spend, in selling its policies, an amount so fixed that the difference between the value of the aggregate satisfaction conferred by the company's operations and the wealth consumed in producing that satisfaction is a maximum. Up to a certain point, the more money a life insurance company spends in getting business, the more beneficial to society are its operations. This relation, however, is subject to the law of diminishing return, and after the maximum point is reached, each addition to the rate of expenditure is increasingly injurious."

This statement was hailed with derision in several quarters. It contains, however, an economic truth. Clearly, the real measure of the value of an institution to the society which creates it is the difference between what it gives and what it takes. Now, we are yet far from the day when life insurance will sell itself. Hence, the middleman—the agent in all his grades; and, consequently, his compensation.

How much the purchaser of a commodity should pay for salesmanship is always a relative question; the modern excesses in this direction are finding their reaction in the factory-to-family idea. Salesmanship being, however, the largest single element in the expense of life insurance, it was natural that in seeking to eliminate economic waste, inquiry was focused on it. The result is well known. The expense of insurance salesmanship was found too high. It was struck at by the now famous section ninety-seven. A cutting down of incomes resulted; a weeding out of each company's agency force. But who will say, even after but three years, that

the savings from salesmanship and at the home office resulting from the New York law of 1906, have not made the difference between the aggregate satisfaction to the insured and the wealth of such insured consumed in producing that satisfaction much nearer the maximum?

The New York Investigating Committee did not, however, recommend any upward limit on the rate of commissions. It assumed that competition between companies would continue to set an effective limit on the loadings, and took such loadings as a basis. In accordance with its recommendations, the Legislature of 1906, in substance, (1) provided that the principal items of the annual acquisition expenses of companies doing business in New York should not exceed (a) the loadings on the first-year premiums, and (b) the present values of the assumed mortality gains for the first five years of insurance, and (2) prohibited any expenses, other than investment expenditures and taxes and other real estate outlays, in excess of the aggregate amount of the actual loadings upon premiums received during the year and the present values of the assumed mortality gains as previously mentioned. Renewal commissions on other than endowment policies were limited to 7½ per cent for the first nine years, and collection fees, after the tenth year, to 2 per cent. The committee, however, did recommend an upward limit on the annual writings of companies doing business in New York, and the Legislature of 1906 adopted its recommendation, so far as New York companies were concerned, fixing the limitation at \$150,000,000.

This is the gist of the now well-known, and in some quarters much-criticized, sections ninety-six and ninety-seven of the New York Insurance Law. Such sections constitute together the important checks on extravagance and waste developed by the investigation of 1905. Neither was perhaps in a strict sense scientific. Both were at the time apparently necessary. Of the two, section ninety-

seven is clearly still the more important. While minor changes in it may later be found to be wise, such section contains the germ of the economic truth that declares that all expense not necessary to the maximum pecuniary efficiency of the company to the public is economic waste. It thus is the arch of the new edifice of life insurance. The limitations of section ninety-six are only the buttresses.

Total Expense Ratio.

The following summary brings out clearly the effect of the New York law on the percentage of total expenses to total premiums of the companies authorized to do business in New York:

Summary of Percentages.

Year	Nine New York companies	Other companies doing business in New York	Averages, all companies
1904.....	24.1	20.6	22.9
1905.....	22.1	20.1	21.5
1906.....	17.6	19.7	18.4
1907.....	14.9	17.9	16.2
1908.....	14.5	18.3	16.1
1909.....	16.5	18.2	17.3

Considered thus from the viewpoint of total expenses to total premiums, the following seem to be obvious deductions: If there was prior to 1906 economic waste in marketing this necessity of life, life insurance, the New York companies were, other things being equal, much more wasteful than the companies of other States operating in New York. Conversely, it seems that since 1906, the New York companies have been more economical than their competitors from outside; but the effect of the falling off in new writings, particularly by the New York companies, due to the exposures of the investigation, is doubtless a considerable factor. The sharp rise of the New York percentage in 1909 suggests the importance of such factor. The narrowing of the gap between the New York percentage and the non-State percentage and the relative steadiness of the latter for the past three years may

well suggest that the companies authorized in New York, with business again normal but under new conditions, are quite rapidly reaching a fairly constant expense ratio.

First-Year Expense Ratio.

The figures shown in this table are taken for the years 1906-1909, inclusive, from the companies' "Schedule Q" for the year in question. For the years 1904 and 1905 the first-year expenses have been taken to be the sum of commissions on first-year premiums and the amounts expended for medical examinations and inspections of risks. In considering the facts shown by this table, it should therefore be remembered that the first-year expenses shown therein do not include considerable sums that should, strictly speaking, be charged against first-year premiums. It should also be remembered that the items of first-year expenses enumerated in section ninety-seven of the insurance law do not include any allowance for that proportion of the general administration or overhead expenses of the company which, as a matter of fact, have a great deal to do with the cost of getting business.

Summary of Percentages.

Year	Nine New York companies	Other companies doing business in New York	Averages, all companies
1904.....	63.4	55.5	60.9
1905.....	73.9	57.4	67.4
1906.....	79.5	60.6	69.8
1907.....	41.3	46.8	44.5
1908.....	52.7	48.4	50.4
1909.....	53.2	48.6	50.7

Examined thus from the viewpoint of first-year's expenses and premiums, the effect of the new laws in reducing the percentage cost is equally noticeable; likewise, the higher expenditure of New York companies before the cataclysm of 1905-6 and the proportionately greater fall of the percentage in such companies to, or, at any rate, toward, the constant percentage, say about 50. Save in 1907, the New York

percentage has been higher than that of the companies of other States.

Renewal Expense Ratio.

The renewal expenses shown in this table were determined by taking the difference between the company's total insurance expenses and the first-year expenses as shown in "Schedule Q"; hence, to the extent that Table B understates the first-year expenses, Table C overstates the renewal expenses. The difference expressed as a percentage, however, would, of course, be much larger in Table B than in Table C. These tables do not check exactly with Table A since that table is constructed on a cash basis. It should also be noted that the renewal premiums shown in this table include dividends and surrender values applied to pay renewal premiums.

Summary of Percentages.

Year.	Nine New York companies	Other companies doing business in New York	Averages, all companies
1904.....	17.9	15.8	17.1
1905.....	16.3	15.8	16.1
1906.....	12.6	14.5	13.3
1907.....	13.0	14.0	13.4
1908.....	12.7	14.7	13.5
1909.....	12.5	14.9	13.5

The noteworthy feature of this table is the drop in the percentage in the case of the New York companies between 1905 and 1906; i. e., nearly four points, while the percentage of the non-State companies fell less than a point and a half. Here also the New York companies seem now to be more economical than their competitors from other states, though the naturally small renewal expense of the Mutual and the New York Life, for reasons later indicated, may somewhat account for this. The steadiness of the average percentage for all companies at about 13.5 during the past four years suggests that the constant renewal expense ratio may be in the neighborhood of that figure.

First-year Commission Ratio.

The statistics in this table are on a cash basis up to and including the

year 1907; for 1908 and 1909 they are on a revenue basis, being taken from "Schedule Q." The effect of this discrepancy of method on the percentage is, however, negligible.

Summary of Percentages.

Year	Nine New York companies	Other companies doing business in New York	Averages, all companies
1904.....	54.8	48.1	52.6
1905.....	65.8	49.7	59.5
1906.....	65.2	51.9	58.4
1907.....	46.7	42.9	44.5
1908.....	43.9	41.1	42.4
1909.....	45.0	42.6	43.8

The striking feature of this table is the decrease in first-year commissions for the period 1907-1909 as compared with the period 1904-1906. It is, of course, possible that this decrease in commissions may not wholly represent a real saving in expense but may be in part neutralized by a change in the mode of compensation for obtaining business. The effect of high-pressure methods, particularly by the New York companies, before the taking effect of the new laws in January, 1907, is noticeable, as is also the similarity of the percentages for both domestic and non-State companies in 1909. It is worthy of note, however, that in every year, the non-State percentage is lower than that of New York, and in 1905 and 1906—the so-called hothouse years—very much lower.

Renewal Commission Ratio.

This table offers a good illustration of the many difficulties in the way of satisfactory comparison of expenses in life insurance.

Summary of Percentages.

Year	Nine New York companies	Other companies doing business in New York	Averages, all companies
1904.....	5.9	6.2	6.0
1905.....	4.8	6.3	5.4
1906.....	4.0	6.6	5.0
1907.....	3.6	6.2	4.6
1908.....	3.3	6.3	4.5
1909.....	3.4	6.1	4.5

The effect of the law of 1906 is here not so marked. While the ratio is lower, the changes in the past four years are slight. The noticeable feature is that the percentage of the New York companies is here much lower than the percentage of the companies of other States. This is due to the very low percentages of the New York Life and the Mutual. In the former, the "Nylie" plan took the place to a large extent of renewal commissions, while the Mutual had, previous to the amendments of 1906 (it no longer does), adopted the policy of paying for most or all of its business

with a high brokerage, thus securing it free from obligation to pay any one more than a small collection fee on renewal premiums.

A Shaking Down of Business.

That there was a shaking down of the business following the investigation of 1905 is clear, as is the fact that the shaking down was much more vigorous in the New York companies than in the non-State companies authorized in New York. Still, following a net decrease of business in force of \$127,000,000 in 1906, \$89,000,000 in 1907 and \$15,000,000 in 1908, New York companies gained \$100,000,000 in insurance in force in 1909. The gain of the non-State companies, on a total of insurance in force but slightly less, was \$363,000,000. But the striking fact is that these large gains were made without much increasing the expense ratio, thus apparently indicating that the thirty-five companies now doing business in New York can each year add largely to their insurance in force at a much lower expense ratio than in the past.

Indeed, if the population estimates are correct—and they are, of course, but estimates based on the census of 1900 and 1905—the per capita insurance in force in New York, while practically stationary for 1905, 1906 and 1907, began rising again in 1908 and went up with a bound in 1909. Other forces than the exposures of 1905 have, of course, affected this per capita. But the fact to be remembered is that, in New York at least, life insurance is increasing faster than population.

Summary of Statistics.

Clearly, then, in twenty-six companies doing business in New York from 1904 to 1909, including practically all the large American life companies:

The percentage of total expense to total premiums in 1904 was 22.9; in 1909, it was 17.3.

The percentage of certain items of first-year expenses to first-year premiums in 1904 was 60.9; in 1909, it was 50.7.

The percentage of renewal expenses to renewal premiums in 1904 was 17.1; in 1909, it was 13.5.

The percentage of first-year commissions to first-year premiums in 1904 was 52.6; in 1909, it was 43.8.

The percentage of renewal commissions to renewal premiums in 1904 was 6.0; in 1909, it was 4.5.

But statistics with their tables and their ratios mean little to the ordinary policyholder. Here, fortunately, it is possible also to speak to him in terms of dollars and cents. Applying the 10 to 1 rule assumed by the Connecticut department as indicating the relation between the cost of new business and the cost of caring for old business:

The initial expense per \$1,000 of policy obligation in force against all companies doing business in Connecticut for 1906, \$36.10; the renewal expense, \$3.61; while

The initial expense of such companies in 1909 was \$31.51, and the renewal expense \$3.15.

Thus the annual saving to policyholders in 1909 as compared with 1906 is \$4.59 per \$1,000 of new business and 46 cents per \$1,000 of old business on the books.

Or, applying these figures to the \$1,219,212,048 of insurance written by the thirty-five companies doing business in New York in 1909 and to the \$10,647,240,069 of insurance in force on the books of these companies at the beginning of the year, it is evident that, assuming that the expense rate of the companies would not have continued to increase after 1906, there has been a saving to policyholders during the year 1909 of \$5,596,183 in acquisition expenses, and of \$4,897,730 in general management expenses, a total of \$10,493,913 saved over what would have been expended, other things being equal, had the limitations imposed by the New York Insurance Law not existed. (While the 10 to 1 ratio on which these figures are based undoubtedly had high actuarial authority at the time of its adoption, it is perhaps not entirely reliable at the present day. For an average company a ratio of, say, 7 to 1, or even 8 to 1, would presumably be now nearer the true facts. Estimates based on these latter ratios are not, however, available and the still recognized and older ratio has therefore been used.)

Similar figures, accumulated over a series of years, point to a total saving that will be stupendous in its aggregate. This is conservation of the highest type. Indeed, it may be that in the summing up by the historian of the future of the progress of the twentieth century's first decade, the New York insurance limitation laws of 1906 may be given as high rank as any of the statutes of recent years passed to prevent waste and thus to conserve the general welfare.

Limitation of Volume.

It has been noted that section ninety-seven, thus solid in economic advantage, was buttressed by the limitation on annual writings known as section ninety-six. The reason for this is well known; is still eloquent of waste and loss, and need not be restated here. In 1906 came the recommendations of the Armstrong Committee. It recognized the truth of the law of diminishing return. It knew that pressure from the agency field might some time sweep away the limitations of section ninety-seven. And so the Legislature of 1906 put up the bars on mere bigness. Granted, the action was arbitrary; just as much so

THE LEADING FIRE COMPANY OF THE WORLD

as was the rivalry of the companies unreasoning. But section ninety-six was a war measure.

And it had its effect! While but one company has perhaps yet found its progress barred, all have known that the old clamor and crowding would no longer be tolerated. It was appropriate, therefore, that as several of the great companies approached in 1910 the \$15,000,000 limit, some change should be made. How better than by abandoning the arbitrary, "Thou shalt not!" and writing over it: "You may, if you but save!" This is the essence of the amendatory law of 1910.

The words, which were in effect made applicable also to non-State companies doing business in New York, are:

"If the total amount of insurance by said corporation in force on the thirty-first day of December of the preceding year is * * * more than six hundred million dollars, [it may write] not more than one hundred and fifty million dollars, or it may increase

its new business over the largest amount issued in any one of the three years immediately preceding in the proportion in respect to said amount which the difference between twenty-five per centum of its net renewal premiums computed according to the bases of mortality and interest assumed in calculating its liabilities, and its total expenses for such preceding year, after deducting from said total expenses, (1) the items of first year expenditure specified in the first sentence of section ninety-seven of this chapter, (2) its actual investment expenses (not exceeding one-fourth of one per centum of the mean invested assets) and (3) taxes on real estate and other outlays exclusively in connection with real estate, bears to said net renewal premiums;" * * *

The purpose is clearly to put a premium on economy and on business that sticks. The company which keeps well within the expense limitations of section ninety-seven may increase more rapidly than the com-

pany which is just within such limitations; but in no event may it increase its business written by a greater percentage than the difference between twenty-five per cent. of the net renewal premiums and the per cent. of its total expenses (after deducting certain specified items) to such net renewal premiums. Thus, in general, a well-managed company is allowed to write each year an amount of new business, increasing as the business in force grows; waste is penalized and the limitation becomes less arbitrary.

These are some of the truths that a layman reads in the statistics and out of the turmoil of recent years. He reads, too, that life insurance is stronger, far stronger, to-day than it was before that turmoil. And as one of the millions of Americans holding insurance policies, he finds satisfaction and hope in that there has at last come peace, a better understanding, and a growth that is true to the slogan of the economist: Spend, but, in spending, save!

The Feasibility of Federal Supervision

ON the last day's session of the twenty-third convention of the International Association of Accident Underwriters at Bretton Woods, N. H., last week, the delegates listened to an address by James C. Jones, of the St. Louis Bar, on "Federal Supervision: Is It Feasible Without an Amendment to the Constitution?" Mr. Jones began by saying that it is little consolation to discuss the legality of State supervision, as we have it, legal or otherwise, already with us, while the only avenue of escape—national supervision—seems barred by numerous legal objections, which have had years of profound consideration, but are apparently as far from removal as when national supervision was first broached. A careful study of the Constitution leaves the matter of national supervision to follow the establishment of the status of insurance under the commerce clause. The Paul v. Virginia decision in 1868 declares that

insurance is not commerce, and this has been the basis of all decisions since. From an exhaustive review of all cases bearing on the subject since, and by comparison with cases involving the telegraph and lottery tickets, Mr. Jones arrived at the following conclusions:

"I have thus considered, and I believe fully and fairly considered, every argument that has been advanced in favor of national supervision without a constitutional amendment. Every positive declaration of the Supreme Court emphatically condemns the suggestion. Each argument in its favor is, in the last analysis, but a straw and rests upon a mere intimation (real or fancied) or an inference drawn from argumentative statements found in opinions in cases that relate to an entirely different, though an allied, subject; and all of them combined amount to mere patchwork which is insufficient in substance and force to justify any belief that the Supreme

Court either has overruled Paul v. Virginia and the kindred cases, or ever will do so.

"I do not say that Paul v. Virginia should not be overruled (nor do I say it should). I simply say it has not been overruled and that there is no substantial suggestion or intimation in any of the opinions of the Supreme Court that it will be overruled. The case has been often affirmed by the Supreme Court, frequently followed, and never criticised. The only logical inference is that it is the law and always will be followed.

"But those who advocate congressional action providing for national supervision urge that as the decision in Paul v. Virginia is inherently wrong and was not carefully reasoned out, it should be overruled, and insist that we can safely depend upon the Supreme Court to do what it should do. But, though the decision in Paul v. Virginia may be inherently wrong, it does not necessarily follow that the

Supreme Court should overrule it. Though wrong, the rule of Paul v. Virginia has been followed (consciously or subconsciously) by every State in the Union. Much of the insurance legislation since the Civil War is based upon the doctrine of Paul v. Virginia, the substance of which is that each State is free to exclude all foreign corporations or admit them to do business upon such terms as they are severally pleased to enact (save where they are engaged in interstate commerce) and that as insurance between citizens of different States is not interstate commerce the States are entirely free to deal as they please with insurance companies. But for the doctrine of Paul v. Virginia, we would have (practically speaking) no such thing as the valued policy law, the non-forfeiture laws and the pernicious suicide statutes of Missouri and Colorado, the major part of the occupation of State Insurance Commissioners would never have arisen and many of these officials would never have been born. These things, and others, may be good or bad—as to some of them I know they are bad and that they should never have been; but they have arisen and exist and they were not only encouraged by the rule of Paul v. Virginia, but without the rule there enunciated they could not have been. Paul v. Virginia established a national policy and made possible the various and varying State policies which exist to-day; and it is extremely improbable that the Supreme Court, even if it should be convinced that Paul v. Virginia was erroneously decided, will at this late date overrule it, when to do so would be to upset the several State policies that are the legitimate outgrowth of that and kindred decisions. To set aside all State legislation on the subject of insurance would produce a condition of chaos in every State in the Union in respect to nearly every question that has to do with the subject in all its multifarious forms.

"These are the obstacles in the way of a favorable decision by the Supreme Court upholding federal supervision, when the question as to the legality or illegality of federal supervision has assumed such form and is presented in such manner that the Supreme Court can consider the arguments which the advocates of federal supervision have advanced or may advance.

"However, before the question can be thus presented to or considered by the Supreme Court, the Congress must enact a law providing for federal supervision and declaring that insurance is commerce. It must do this in the very teeth of the opinion of the United States Supreme Court in the hope that the Supreme Court will part its teeth and swallow this congressional fiat and accept a congressional opinion on a judicial question (or what has been uniformly treated

as a judicial question) in preference to its own opinion. Those who believe that Congress can be induced to do this have more confidence in the force of their position and in the fearlessness of Congress than I have.

"State supervision provides a plentitude of place and profit for the politician, increased political power to present incumbents and increased taxation to individual States. These will be potent powers to prevent congressional action. Furthermore, there is the entirely legitimate argument that State policies and State bureaus, established under powers heretofore conceded to be in the States, ought not to be disturbed by a mere congressional opinion at variance with the opinion of the Supreme Court, or even by a change in the opinion of that court. And, candidly, a rule of law so long established and so often affirmed, which has been the foundation of so much independent action by the States, ought not to be altered merely because the Congress, or the judges of to-day, differ in opinion with the judges of the past forty years. The doctrine of stare decisis should be applied to this question, if it is ever to be applied again. In the language of the Supreme Court in the Income cases (157 U. S. 429): 'The doctrine of stare decisis is a salutary one and is to be adhered to on proper occasions.'

"What occasion is more proper than one where by reason of an unbroken line of decisions covering a period of over forty years all of the States, some fifty subordinate governments, have built up a system of laws regulating all the various forms of insurance to the uttermost detail pursuant to a rule first announced by national authority. Can it be that a mere change of opinion at this late date is a sufficient warrant for upsetting this entire course of legislative action and judicial decision in all of the States? Ordinary fair dealing, regardless of the doctrine of stare decisis, would seem to require a negative response.

"You may ask then wherein is the remedy from the evils of the multiplicity of supervision which is the result of State supervision. That there are many evils of State supervision I concede. That national supervision would be attended with many evils, however, I very much fear, and, what is worse, from the evils of national supervision you would be practically remediless. Iniquitous legislation or official oppression by the States is remediable by withdrawal from the State—a remedy that has been resorted to by many companies more than once; but iniquitous national legislation or oppression by a national official must be submitted to, and extinction is the only alternative, practically speaking.

"An amendment of the Constitution, in my judgment, is the only means of securing national supervision. If fed-

eral supervision is desirable, and if, by federal supervision, you mean supervision from Washington to the exclusion of supervision from any other source (and this is what you should have, if you are to have federal supervision at all), the Constitution should be amended, so as to give Congress the power to regulate all insurance, interstate or intrastate.

"Is it reasonable to hope that such an amendment can be secured? Perhaps so and perhaps not. But, in any

event, it is at least as reasonable as the hope of federal supervision without a constitutional amendment; for this is, I fear, a delusion and a snare that will entail great effort, vast expense and yield nothing.

"However, the advisability of federal supervision, with or without a constitutional amendment (which is not discussed in this paper), may not prove to be a blessing unalloyed, and my final word to you is: Beware, lest you fly to ills you know not of."

Pursuing the Shawnee

MOBILE, Ala., Sept. 28.—Commissioner Hartigan, of Minnesota, and Commissioner Button, of Virginia, in a joint memorandum presented to-day to the National Convention of Insurance Commissioners, relative to the examination of the Shawnee Fire Insurance Company of Topeka, Kan., attacked James W. Going, Vice-President and Manager of the Shawnee, and also reflected upon Secretary Morgan, of the Shawnee. The findings in the report include charges that the annual statements sworn to with the departments have been false for a number of years in important and vital particulars, and that on December 31, 1909, instead of the reported surplus of about \$200,000 the entire capital and surplus had been wiped out and there was an additional deficit of about \$100,000.

This false statement of conditions was accomplished, the record declares, by deliberate forcing of balances and intentional falsification of the unearned premiums and outstand-

borrowed large sums on its notes issued by the officers without record or authority. Although Manager Going's salary was fixed by law, large sums have been credited monthly in addition on orders signed by him. The report closes with the statement that there are evidences of criminality in some of these transactions, and urges each Commissioner to examine the statutes of his State to determine whether indictments for perjury will properly lie.

The convention directed that the facts be laid before the Kansas department, and it was evident that the Commissioners believed the Kansas department was responsible for not finding out the company's condition.

GOES TO PROVIDENT SAVINGS

The Provident Savings Life Assurance Society of New York announces the appointment of Ralph H. Gorsline as manager at its Rochester agency. Mr. Gorsline leaves the Penn Mutual to go with the Provident Savings.

CITY FIRE ESCAPES.

John J. Murphy, Commissioner of the Tenement House Department of the City of New York, has prepared the following notice to the public as a means of helping to produce a betterment of fire escape conditions:

"The Fire Department records show that the approach of cold weather brings a great increase in the number of fires, and hence increased danger to the lives of occupants of apartment and tenement houses. Hence fire escapes must be kept clear.

"The indifference and carelessness of many citizens now using fire-escapes as a storage place for boxes, bedding and discarded furniture endanger not merely their own lives but those of other occupants of the buildings in which they live. The continuous efforts of the Tenement House Department to keep fire-escapes clear of such obstructions are defeated by the restoration of these articles to their place on the fire-escapes within an hour or two after the time when they have been removed by the orders of the Tenement House Officer.

"An objectionable habit is growing up in many sections of the city of hanging clothes lines from fire-escape balconies. These not only give the street in which such practices are permitted an unsightly appearance, but it is a constant fire danger if people are careless in throwing lighted matches, cigars or cigarettes from windows."

**Absolute Security and
Economy of
Management**

Along the Shores of Lake Michigan

CHICAGO, Sept. 28.—Whatever reasons Superintendent Barnes of Kansas had to "point with pride" to his administration of the Insurance Department, he has one less now. The reinsurance of the Shawnee adds nothing to Mr. Barnes's prestige. That a company should be allowed to run along for years underestimating its reinsurance reserve until it was about half a million less than it ought to be does not speak well for supervision in the State where this occurred, especially when the undercalculation was so palpable that managers of other companies have noticed it for years.

No tears have been shed in Chicago over the demise of the Shawnee. While the managers of two or three companies were in Topeka negotiating for the business, and the reinsurance was but a matter of a few hours, managers in Chicago were asking for the news with grins on their faces and every appearance of lightness in their hearts. While they may not have said as much in words, it was easy to draw the inference that they were satisfied to have Mr. Going "get his." For more than a year Vice-President Going of the Shawnee has been persona non grata among his managerial associates on account of his support of the Kansas rating law. His position for some time past has been very unenviable. Mr. Barnes had it in his power to break the company by examining it, therefore, it is intimated, it was good politics for Mr. Going to support the Barnes policies with vigor. On the other hand, in so doing he was offending the managers of other companies, and it is believed by some that the tip went out from Chicago to some insurance department that the Shawnee ought to be examined, "resulting in Mr. Wolfe's being sent to Topeka and the speedy discovery that reinsurance was the company's only way out.

Mr. Going was in Chicago just before the Union meeting, trying to negotiate reinsurance with a prominent company, but failed. Some other managers knew of this, but the terms he offered did not appeal to them. Apparently they thought more satisfactory ones could be secured after the examination had proceeded a little further. Immediately on reaching home from the Union meeting Fred S. James, of the National of Hartford, hastened to Topeka and in about three days he had the deal closed.

What the National will do with the business is a matter of speculation here. The National has not maintained a farm department in the West. As the reinsurance brings to it a very large volume of Kansas farm busi-

ness, it may open a farm department with the Shawnee business as a nucleus. That, however, is not known and will not be known until Mr. James sees fit to announce his plans. The Shawnee has on its books much farm business the National will not want; at least this is the opinion expressed by some men who know the farm proposition in the West and know something about the Shawnee's farm business. It has written it in many States through recording agencies, while the leading farm companies write this business on application and express a strong distrust of letting recording agents write it.

The Shawnee was one of the very worst examples of a young company wanting in financial strength spreading all over the country. The poor little Freeholders of Kansas, which went the same route a few weeks ago, erred in the same direction, but only about a fifth as far, for the Shawnee was in forty States.

The passing of the Shawnee, following so closely that of the Freeholders, has started numerous rumors of other likely reinsurances. Several companies are being quite freely discussed in Chicago, and to some of them doubtless a grave injustice is being done. The writer has in mind one company, now in better condition than at any time in years past and with brighter prospects than it has ever had before, which has been whispered about to the discomfort of its friends. But it will not surprise Chicago underwriters if a few more companies have to seek relief before statement time, at least to the extent of reinsuring their liability in part of their territory and retiring to smaller fields. This may seem like a hardship to them, but it will be the best thing that could happen to some of them, and will be good also for general conditions in the Western field.

* * *

Announcement that the National and the Ben Franklin of Pittsburg are to be consolidated may have been the cause of the report that this merger is to be followed by others in Pittsburg. Whether well founded or not, the report has reached Chicago that three additional companies are to be parties to this consolidation eventually. It has been a cause for comment more than once that such action was not taken in Pittsburg before this. There is enough insurance capital in the city to make two or three large

**No head of a family need look
beyond the advertising columns of
THE CHRONICLE for LIFE
INSURANCE.**

companies, but it has been scattered among a dozen or so, of which only three or four could boast of being other than little concerns. Years have passed since the Pittsburg steel companies saw the benefits of consolidation, but insurance companies move slowly in that direction.

* * *

The various applicants for the position of Western manager of the Sovereign Fire are growing weary of the long delay in General Manager Wilson's coming to Chicago to make the appointment. For several weeks he has been expected within a few days.

* * *

It is a safe assertion that not in a

long time has the Western Union had a stronger President than Fred S. James. For years he has towered up as one of the largest figures in Western fire underwriting. As general agent of the National of Hartford he has shown a force and resourcefulness that have caused much admiration and not a little envy. Leading agents have recognized in him a man with thorough understanding of the business and an exceedingly powerful influence.

* * *

The Queen City Fire of Sioux Falls, S. D., which was making a spectacular career for itself about four years ago, and then suddenly drew in its horns, is fortunate in securing as its Secretary and General Manager Theodore F. Grefe, who has just retired as Secretary of the State of Des Moines. The first administration of the Queen City gave a fine exhibition of what a young company ought not to do. Then came a couple of years while the company has been very much out of the public notice. Now Mr. Grefe will take hold and apply the conservative methods that he used successfully with the State. The company, aside from doing a little Eastern business, is operating only in the two Dakotas, Nebraska and Iowa, and there it is likely to remain for some time to come. Mr. Grefe is no expansionist.

* * *

The inability of the Employers' Liability Commission of Illinois to recommend a Workmen's Compensation bill, because two of the labor members, reflecting the sentiments of the Chicago Federation of Labor, would not agree to it, has caused considerable adverse comment in Chicago. Last week the two leading political parties held their Illinois State conventions. The Republicans, expressing regret that the commission failed to agree upon recommendations, "urge the General Assembly to take such steps as will lead to the enactment of laws governing the relations of employers and employees which will be fair alike to all parties in interest."

The Democrats are more specific, saying: "We favor the passage by Congress and the General Assembly of this State of adequate and just workmen's compensation acts. We favor a Federal and State employers' liability act, as well as safety appliance legislation calculated to protect the lives and persons of those who toil."

From these platform declarations it looks as if the General Assembly would undertake some sort of legislation on employers' liability and workmen's compensation, whichever party may be in control. If the Chicago labor leaders have their way a law will first be passed depriving employers of their present defenses.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

In New England

BOSTON, Sept. 28.—Action on the "work and material clause," which was on the calendar of last Saturday's meeting of the New England Insurance Exchange, was deferred for the purpose of further conference with other organizations in this field. Article 8 of the by-laws, relating to honorary membership, amended to read as follows, was adopted:

"Article 8. Honorary membership may be conferred on those who have been active members of this Exchange, but no one shall be eligible to honorary membership who is still eligible to active membership. All proposals for honorary membership must be made by active members, and in writing, and must be referred to the Executive Committee, which shall report on the eligibility of the persons proposed, and on whose report the names of the persons proposed shall be placed in nomination and be balloted for at a regular meeting, a majority of the votes cast being necessary to an election. Honorary members shall only be entitled to the privileges of Exchange meetings, but they shall be debarred from voting. Honorary membership may be terminated at any time by vote of the Exchange.

H. H. Clinton, of the home office of the Continental, was elected to honorary membership. Active membership was conferred on John H. G. Williams, special agent of the Fidelity Underwriters, and Frank S. Lake, special agent of the German-American of Baltimore.

The Lecture Committee of the Insurance Library Association has under consideration plans for extending the popularity of its meetings, and to that end will endeavor to arrange for suppers at 50 cents in the restaurant of the Oliver Building, and the use of the assembly room of the Exchange for the meetings. It is also intended, in case these plans are realized, to open the season with a discourse on "Ratemaking by States." An effort will be made to secure some one of commanding authority to consider that particular subject. "Expense Reduction" is also a topic in view for the season.

Massachusetts Local Agents.

At a meeting of the Executive Committee of the Massachusetts Association, held in Boston on September 24, it was decided to hold the annual meeting of the organization in Boston on October 22, 1910. A committee consisting of William Gilmour, of Boston, and T. H. Raymond, of Cambridge, was appointed to select a place of meeting, while William Rogers and Edward F. Woods, of Boston, were appointed a committee on speakers, the President acting ex-officio as a

member of both committees. It was voted that the Secretary of the Association send letters to local boards throughout the State, requesting them to assist in securing a large attendance at this meeting. A special committee consisting of William H. Rogers, Edward F. Woods and George C. Russell was appointed to secure memberships among the Boston agents.

President Edgerton.

Herbert O. Edgerton, for the last nine years identified with the Boston Mutual Life, successively as general agent, Secretary and Vice-President, was elected President of that company, to succeed the late John W. Wheeler, on Wednesday, the 21st inst. William P. Wood was elected Vice-President, Edwin Wilcock Treasurer and William A. Morse Counsel. Mr. Edgerton's long identification with the Boston Mutual Life and his efficient zeal for its interests fit him peculiarly well for the leadership of its affairs.

Uniformity of Laws Urged.

At a largely attended meeting held in the rooms of the Boston Chamber of Commerce last Friday, Governor Draper presiding, a resolution was unanimously adopted favoring the organization of a New England Council of the National Civic Federation and requesting the governors of the New England States to name representatives from their several States. The Federation is actively engaged in promoting uniformity of laws among the States of the Union on a variety of subjects, among them insurance, taxation, compensation for industrial accidents and vital statistics—all touching concerns of the underwriting world—and it is hoped that New England will add a powerful impetus to the movement. Insurance interests have experienced as deeply as any others the hampering and wasteful effects of the dissimilarity of State laws.

New England Brevities.

Two French fire insurance companies have applied for admission to the State of Massachusetts—La Generale, represented in the United States by Fred S. James & Co. of New York, and L'Union, whose American managers are Starkweather & Shepley, of Providence, R. I. The latter will be represented in Boston by S. E. Barton.

* * *

Carl Bradley, formerly manager of the Boston Mutual Life, but now President of the Empire Life of Seattle, has been in Boston the last week renewing old acquaintances. Mr. Bradley's new company promises to be one of the giants of the West, starting with \$1,000,000 capital, and \$500,000 surplus, and will begin writ-

ing life, liability and health insurance on January 1.

* * *

The New England Casualty Company of Boston has been authorized to transact business in Maine and Rhode Island.

* * *

A committee on fire insurance and fire prevention has been appointed by the Boston Chamber of Commerce. Clarence H. Blackall, a noted architect, is chairman of the committee.

* * *

The first hearings before the Massachusetts Commission on Compensation for Industrial Accidents are set for 2 and 7:30 P. M. to-day, at Room 227, State House, Boston.

* * *

The Boston Finance Commission has approved of a loan of \$68,658 for rebuilding the Fire Department repair shop, but does not favor a loan of \$25,000 for an engine house on Parker Hill, a question which has been agitated for years.

* * *

The Massachusetts Fire and Marine has been admitted to Missouri, Illinois and Michigan, and has appointed F. C. Hamlin as its representative at East St. Louis, Ill., and Leo K. Hennies at Detroit. Authorization in Indiana, Ohio and Wisconsin is expected in the near future.

* * *

A disastrous fire early yesterday morning did damage estimated at \$150,000 to the lumber plant of Palmer & Parker, on the Charlestown waterfront, Boston. Thus have the southern and northern ends of the city in

two consecutive months witnessed two destructive fires of this kind.

Boston Life Underwriters.

The Boston Life Underwriters' Association will open the Fall season with a smoke-talk, to take place at the City Club on Tuesday, October 25, from 4 to 6 P. M., followed by a beef-steak supper at 6. It is hoped to have as speakers Judge Waite, of the Massachusetts Supreme Court, and either Bernard Rothwell, President, or

James A. Storrow, Vice-President of the Boston Chamber of Commerce. P. V. Baldwin, chairman of the Executive Committee of the national association, and Charles E. Fish, of the Phoenix Mutual, are also on the speaking programme, which will embrace topics of definite and practical value to the solicitor in the field. A fetching outlook, surely. Let every member respond and be on hand, October 25, at 4 in the afternoon.

EMIL SCHWAB.

Faxon is Re-Elected

THE twenty-third annual convention of the International Association of Accident Underwriters closed its sessions at Bretton Woods, N. H., last Friday with the re-election of Walter C. Faxon, Vice-President of the Aetna Life of Hartford, as President of the association. The other officers for the coming year are as follows: Edward Williams, general manager and Secretary of the Imperial Guarantee and Accident, Toronto, First Vice-President; L. C. Deets, Secretary of the Iowa State Travelling Men's Association, Second Vice-President;

Robert W. Hyman, Vice-President of the Continental Casualty Company, Secretary; Bertram A. Page, Secretary of the accident department, Travellers Insurance Company, Treasurer; Horace B. Meininger, of the German Commercial Accident, Librarian; Alfred E. Forrest, Secretary of the North American Accident Insurance Company, chairman of the Executive Committee.

Bob's Remarks

OPPORTUNITIES are of two kinds—those which we make for ourselves and those that come to us without effort on our part. There is an old saying that "God and nature love a hustler." This is true in more ways than one. To a large extent the first of the "opportunities" referred to above may be applied to the work and success of the American Casualty Company of Reading, Pa. This company is a "hustler." With its total assets of nearly \$500,000 and conducting business of a general character—personal accident, health, liability, steam boiler, burglary and plate glass—a total premium income, based on conservative lines, foots up close to \$300,000. The company is seeking for active and successful agents in the Eastern and upper Middle States.

* * *

At a recent conference between Superintendent of Insurance William H. Hotchkiss, of New York, and Frank H. Hardison, Insurance Commissioner of Massachusetts, it was arranged to extend the time for filing the rulings on standard provisions on personal accident and health policies.

* * *

George Chesebro, formerly connected with Amerman & Patterson, is now manager of the policy department of Newman & MacBain. His valued services with the former brokerage firm will be well appreciated by both brokers and the new firm, with which he is now connected.

* * *

The retirement of the Shawnee, which company has been an aggressive factor in the local and agency field for the last two years, rather presages a similar result with other companies that have written perhaps more business than their capital and assets warranted. One broker remarked after the Shawnee reinsurance: "We now have a strong company (the National of Hartford) until expiration."

* * *

According to reports from the Pacific Coast, Willcox, Peck & Hughes have captured the entire line of Wells, Fargo & Co. The full commitment of some \$2,000,000 has been covered in the London Mutual Fire Insurance Company of Toronto as a warranty for Lloyds, London. About one-half of the insurable value is situated in San Francisco, Portland and other extreme Western points. It is stated that the rate for the schedule as placed is 50 cents.

* * *

In connection with the local department of the Pacific Coast Casualty Company, under Whilden &

Hancock, as general Eastern managers, W. H. Crolius, formerly secretary of the American Insurance Company, has been installed.

* * *

Elaborate plans for next year's season of the Insurance Society of New York have been announced. There will be four principal meetings—October, January, March and May. The subjects of address or for discussion will embrace all kinds of insurance—marine, casualty, life and fire. Prominent experts on each topic will be the speakers.

* * *

On Thursday last David Rumsey was elected Second Vice-President of the Continental and Fidelity-Phenix Insurance Companies. Mr. Rumsey will give his entire time to these companies, thus relinquishing his former law practice.

* * *

George L. Shepley has been elected President of the Insurance Association of Providence.

* * *

A prominent Jewish broker told me the other day that his wife, who is almost as active in business matters as himself, while purchasing some goods at an uptown department store, handed in her husband's card merely as a memorandum of name and address. After reading the card, the gentlemanly clerk noticed that "insurance" was mentioned. Inquiry proved that the husband of the lady placed life as well as fire business. As the young man had just been married and wanted some life insurance the broker was requested to call. Result: A \$3,000 20-payment life policy. The commission, by the way, was paid by the broker to his energetic and tactful wife.

* * *

Everything is auto nowadays. A new up-to-date automobile fire engine has been installed at Hackensack.

* * *

The Royal Insurance Company has received its license to write marine risks in this State. It will not begin marine business here for several weeks.

* * *

George L. Shepley, of Starkweather & Shepley (Inc.), of Providence, has been elected President of the Insurance Association of Providence.

* * *

The Fidelity and Deposit Company of Baltimore received its certificate from the New York Insurance Department on Tuesday to write health, accident, burglary, plate glass and bonding business. It has upward of 3,000 agents, the metropolitan manager being Chester M. Cloud, 68 William Street.

IN RE PAUL VS. VIRGINIA

Darwin P. Kingsley, President of the New York Life, to Test His Belief That the Supreme Court Would on Occasion Reverse Historic Decision

EVER since 1868, no matter how much of a tendency there has been toward centralization of power in the Federal Government in regard to other matters, underwriters of all sorts and descriptions have been mostly of the belief that no such tendency would affect them. The reason for this belief was of course the decision of the United States Supreme Court in the case of Paul vs. Virginia, in the course of which the court held that insurance was not commerce.

At the Bretton Woods convention of casualty underwriters last month James C. Jones, of the St. Louis Bar, in a closely reasoned address, contended that Federal supervision of insurance was not feasible without a constitutional amendment. This contention of Mr. Jones elicited from Darwin P. Kingsley, President of the New York Life Insurance Company, an interview in which Mr. Kingsley contended that the Supreme Court was wrong in the case of Paul vs. Vir-

ginia and that in his belief, were the court to have the full facts before it to-day, the result would be a reversal of that historic decision.

Out in Deer Lodge County, Montana, the New York Life Insurance Company has appeared as a plaintiff in the United States District Court against the county in a case involving the legality of the classification of insurance premiums as personal property subject to taxation as such over and above the amount of the company's losses and expenses in the State. It is asserted that the intention of the New York Life is to carry this suit to the Supreme Court.

In the complaint, which comprises eleven allegations, an effort has been made to state the facts that in their entirety they shall cover all phases of the insurance business in such form that the high court of the land will have before it a statement of facts sufficient to enable it to review and either uphold or reverse the case of Paul vs. Virginia.

KINGSLEY OPPOSES JONES

THE opinion set forth by James C. Jones, of the St. Louis Bar, at the convention of casualty underwriters at Bretton Woods to the effect that Federal supervision of insurance could not be obtained without a constitutional amendment, elicited a reply from Darwin P. Kingsley, President of the New York Life Insurance Company, who said in an interview which he gave to the "New York Commercial":

"I entirely disagree with two out of three conclusions reached by Mr.

Jones. They are:

"First—That the Supreme Court in its decision in the case of Paul vs. Virginia was wrong.

"Second—That the Supreme Court never will overrule the doctrine which it then laid down.

"Third—It is doubtful whether the Supreme Court ought to overrule its action in that case."

"To say that the court has been wrong and that with opportunity it

(Continued on Page 8.)

WOULD EXTEND TIME TO SELL STOCKHOLDINGS

On January 1, 1907, the law became operative in this State, which requires life insurance companies of New York to dispose of their stockholdings, the amount of these securities held by the companies aggregating at that time about \$107,000,000 in book value. This time limit under the statute will expire on December 31, 1911, and an effort will be made at the next session of the New York Legislature to obtain an extension of this time limit. In regard to this effort, President Peabody, of the Mutual Life, has this to say:

"Had the Mutual Life disposed of its stock holdings of 1906 at the best prices obtainable for large blocks since that time its loss would have been over \$10,000,000. Even of active stocks we have been unable to sell more than a few hundred shares without driving prices below a fair level.

"I do not propose to make myself liable to incarceration for infraction of the law if I can help it, neither do I propose to bear the responsibility of incurring any such loss to the company. We are advised that the Armstrong law is unconstitutional as regards our stock holdings, but I intends to place the matter fairly before the Legislature to ascertain whether we are expected to accept unreasonable prices simply because a legislative order apprises the market that we will be compelled to sell certain holdings by a certain date. Many of these holdings are inactive, such as National Bank of Commerce stock. We do not feel called on to give away control of that bank, and to secure a fair price we must bide our time.

"To show that we have acted in good faith, we have disposed of some \$25,000,000 of the specified holdings since enactment of the Armstrong law. No one has offered anything like a fair price at any risk of being refused. There are plenty of bargain hunters, who, knowing that such a block of stock must come into the

market by a fixed date, will "bear" that particular stock that we may be compelled to part with it at a fraction of its value. As executive of the company, I do not intend to play into such hands if I can avoid it. That is why we have two-thirds of our 1906 stock holdings still on hand, and that is why we shall go before the legislature for an extension of time."

ROYAL INDEMNITY TO START.

The intention to incorporate the Royal Indemnity Company of New York, with a capital of \$500,000, is announced, consequent upon reports some time ago that the Royal Insurance Company of Liverpool intended to organize a casualty company into the laws of the State of New York. The incorporators of the Royal Indemnity include E. F. Beddell, G. W. Burchell, C. F. Shallercross, W. L. H. Simpson, J. E. Hoffman, J. H. Pearce, James A. Macdonald, Milton Dargan, N. S. Bartow, Frederick W. Day, Rolla V. Watt, George W. Law and S. Y. Tupper. The announcement of the organizers of the Royal Indemnity sets forth that it is intended to transact the business of accident and health insurance, liability insurance, burglary insurance, plate glass insurance; and in addition to write fidelity and surety bonds of all kinds.

AMONSON INTERESTS GET THE UNITED FIREMEN'S.

After a persistent fight for control, the United Firemen's Insurance Company, one of the oldest fire insurance companies in this country has passed into the hands of Chandler Brothers & Co., stock brokers. At a meeting of the directorate of the company yesterday Percy M. Chandler was elected a director to succeed James Caven. The resignation of Charles W. Walsh as a director was accepted and next week there will be a special meeting of the board at which a representative of the Chandler interests will be named to succeed him.

The Chandler interests are closely associated with the People's National Fire Insurance Company, and the proposition is to operate the United Firemen's Company as an adjunct of the People's National. The capital stock of the United Firemen's Company, which is \$200,000, will shortly be doubled, as announced in another column, and it is expected that it ultimately will be increased to \$1,000,000.

It is announced that Colonel Robert B. Beath, President of the United Firemen's, will be retained in a responsible position.

No institution employing men in positions of financial trust need look beyond the advertising columns of THE CHRONICLE for FIDELITY INSURANCE.

Here and There

COL. JOSEPH BUTTON, of Virginia, was elected President of the National Convention of Insurance Commissioners, with O. H. McDonald, of Connecticut, as Vice-President, and H. R. Cunningham, of Montana, as Secretary. The Executive Committee is made up as follows: W. H. Hotchkiss, New York, chairman; Fred W. Potter, Illinois; F. H. Hardison, Massachusetts; Reau E. Polk, Tennessee, and E. W. Beedle, Wisconsin. The 1911 convention will be held in Milwaukee.

* * *

W. Farnam Smith & Co. have resigned as Omaha general agents of the United Surety Company of Baltimore for the States of Nebraska and Iowa, and discontinued the bond department in connection with their insurance business. H. O. Beatty, who was manager of the bond department for W. Farnam Smith & Co., and who has been manager of the United Surety Company's general agency department in Iowa and Nebraska, also severed his connection with that company and has accepted the position of superintendent of agencies in the surety department with the National Fidelity and Casualty Company of Omaha.

* * *

At the annual meeting of the Surety Underwriters' Association of the City of New York on Tuesday the following officers were elected: President, Richard Deming, manager of the American Surety Company; Vice-President, Sylvester J. O'Sullivan, manager of the United States Fidelity and Guaranty Company; Secretary and Treasurer, John B. Murphy, Resident Vice-President of the National Surety Company. Executive Committee—Joseph A. Flynn, of the Fidelity and Deposit; E. B. Southworth, Jr., of the American Bonding Company; Daniel Stewart of the Empire State Surety Company; W. M. Smith, of the Aetna Indemnity; John B. Murphy, Sylvester J. O'Sullivan and Richard Deming.

* * *

Harris J. Latta has been appointed manager of the fidelity and surety department of the Philadelphia office of the Maryland Casualty Company, under its resident manager, John W. Donahue.

* * *

W. A. Hatley, of Prescott, Ark., administrator of the estate of W. M. Hatley has written the following letter to R. C. Bright, agent of the Fidelity Mutual Life at Little Rock:

"As agent for the Fidelity Mutual Life Insurance Company, you have acted so disinterestedly toward myself and family in the matter of the life insurance of my son, W. M. Hatley, de-

ceased, that we feel without some acknowledgment we should be recreant to our sense of grateful recognition for your kindness, and that of your company, which, without our knowledge, informed us through you that the policy which my son held had not lapsed, as we had supposed, and today we are in receipt of your company's draft for \$2,000, in full settlement of policy, which we had burned after my son's death, thinking it not worth saving. Your company could have kept this money without our suspecting it. We regard it as evidence of a business upon a very high moral tone, and it deserves to be known more widely than we can give it publicity."

WORKMEN'S COMPENSATION INSURANCE IN FRANCE

By Miles M. Dawson

Copyright, 1910, by Miles M. Dawson.

PARIS, Aug. 29, 1910.—The Workmen's Compensation law of France went into effect in 1898, and, with various amendments, still continues in force. It makes the employer liable in every case of accident, unless he can show that it is due solely to the wilful act or the gross negligence of the workman who is injured or killed. In less than a dozen instances, it is said, have employers escaped being held liable by interposing their defences. In very few also have employers been specially mulcted beyond their usual liability under the law, on the ground that the accident was due solely to their gross, inexcusable, criminal or near-criminal negligence. Both of these features were made much of when the bill was under discussion, but neither amounts to much in practice.

Insurance is not compulsory. About three-fourths of the employers who are liable under the law are insured. Those who are not, are, on the one hand, those who employ great numbers and who consider that they can expect a fair average of losses in consequence, and so can afford to carry their own risk; and, on the other hand, those who employ very few or one merely.

The larger number of those who are insured are in mutual companies. This is both because such companies are really popular, and also because in their sharp competition the better stock companies refuse doubtful risks or so increase the premium rates as to drive them into mutuals. They are held up to what is believed to be a proper and safe "claim reserve" standard, however, by the governmental authorities, which diminishes their apparent advantage in cheapness over stock companies, but renders their reliability much less questionable.

The question of the reliability of a French company, whether stock or mutual, does not trouble the insured employer at all, however, nor does the question of the reliability of the company or of the employer trouble an injured workman or the family of a deceased workman. The French law taxes every employer, whether insured or not, a small percentage of his annual payroll for a guaranty fund maintained by the nation, from which all payments defaulted in by an insurance company or an employer will be discharged, the fund becoming subrogated to the claim which is so discharged. Reimbursement may be enforced if there are assets against which to enforce it; but in any event the French Republic guarantees the payment to the injured workman or the dependents of the deceased workman.

The employer is entirely freed from direct liability, also, if he is insured in a regularly licensed French company, whether mutual or stock; and, in event of its failure, the nation must look to the company's assets only for reimbursement of its outlay in payment of benefits defaulted in by the company.

The French stock insurance companies, though paying a commission to agents of 10 per cent, conduct their business at an aggregate expense rate as low in some cases as 20 per cent and averaging in the leading companies only about 23 per cent. In other words, so far as management expenses, exclusive of commissions to agents, go, they do business at nearly as low a percentage of expenses to premiums as do the mutual associations of employers in Germany. Some of the French mutuals are

yet more economical, however, employing no agents and keeping their expenses at 10 per cent of the premiums or under.

The business of the stock companies has been pretty constantly conducted at a loss. Even the best of them has hardly shown an annual profit until the last two or three years. This in spite of frequent and very considerable increases of rates. The mutual companies also have made pretty constant increases or resorted to assessments.

The leading French companies, after pretty full and careful investigation, adopted the Austrian method of rating. This consists in forming rates for classes, to which are given designations as by letters or numbers, the rates being multiples of a key number or percentage. Each class usually contains several multiples of the key number or percentage, thus affording an opportunity for minimum, average or maximum rating, as the excellence or defects of the risk may call for.

The key number or percentage may be varied from year to year, if experience calls for it by reason of losses in general proving higher or lower than was expected; and, of course, particular classes of industries may also be shifted from one rate class into another, as experience may indicate. Indeed, this may even be done as to a particular industry. The former raises or lowers all the rates; the latter merely adjusts the relative rates according to the facts of experience. The result is a very convenient and flexible system.

At first Austrian key percentages were adapted and employed, but these have now been discarded for key percentages based upon French statistics. The Austrian grouping of industries and nomenclature of the same have been followed, however, though the rating of classes of industries has been very considerably varied, as a result of French insurance experience.

Losses are adjusted by the French magistrates on the certificate of any licensed French physician as to the character, extent and duration of the injury and as to the fact and cause of death, and upon proper proof as to the wages earned. There may be an appeal to a court of three arbitrators, one selected by the employers, one by the employes and one independently appointed. The magistrate may find as to the fact of liability, as to the degree of impairment of earning power, as to the amount of wages, as to the amount of disability claim or the amount of pension for the widow and each minor orphan. If the impairment is 15 per cent or less he may approve its being compromised for a lump sum; this is often done. All settlements, however, of whatever kind, must come before the magistrate for approval before they are binding. The workman or his dependents, as the case may be, may be represented by counsel and the magistrate has power to appoint counsel, to be paid by the state.

A defect in the French law is that notice may be given at any time within one year after the accident; and claims may be made, therefore, long after recovery and when investigation has become impossible. The employe has free choice of physicians, who must be paid by the employer, and months after the alleged accident the physicians' certificate as to the disability and the attendance may be received, together with a bill for services.

Amendments are now proposed, requiring immediate notice, with power to the magistrate to excuse its absence

upon proof of good reason therefor; and to confine medical treatment, for which the employer must pay, to physicians designated by him, giving only a certain small additional per diem for medical services when other physicians are employed.

There is no discoverable disposition in France to introduce compulsory state insurance of employes or compulsory sickness insurance. The state is already in competition with private companies, having established a "Caisse" or department, where employers may insure if they will against their liability for the death or the permanent disability, whether partial or complete, of their employes by reason of accident arising out of and in the course of their employment. This department does but a small business, represented by about one one-hundredth of the total premiums. This is ascribed to the fact that it pays no commissions and to the fact that it does not pay for temporary disability. Both doubtless have their effect, but the inflexibility of the rates, which are fixed by a decree, signed by the President, and have not been changed for years, is doubtless more to blame. The manager may vary them from 30 per cent below to 30 per cent over, and in some cases to 60 per cent over, but he cannot

alter the classification, though the propriety of alterations has doubtless often been indicated.

In any event it seems unlikely that employers will consent to be required to insure in a state institution which they have not found it desirable to patronize, though they have been free to do so.

There as a somewhat greater probability that compulsory sickness insurance, to which both employers and employes will be required to contribute, may be instituted. This would be chiefly in the existing friendly societies which now very imperfectly and incompletely cover the field. Leaders in the "mutualiste" or fraternal movement now in some significant instances favor this. It is important because it would cover the earlier weeks of disabilities.

One indication that such compulsion may be coming is that a compulsory scheme of old age and total and permanent disability insurance has recently been made a law and soon goes into effect. Union workmen, however, have declared against this, chiefly on account of the large accumulation—it is on a sort of hybrid "kapital-deckung" plan—and the fact that the management is bureaucratic. Its popularity is not likely to be so great as to cause compulsory sickness insurance accepted.

Along the Shores of Lake Michigan

CHICAGO, Oct. 5.—Fire underwriters in Chicago were given something of a surprise by the action of the Insurance Commissioners at Mobile in indorsing the contingent commission plan. When Chairman Barry, of the Committee on Fire Insurance Expense met a number of managers in Chicago last Winter and heard their views the impression was left with some of them that while he thought the contingent commission plan very fine in theory he was not sure that it would be practicable to try to introduce it at this time.

G. H. Lermitt, manager of the Northern Assurance, who is chairman of the Committee of Managers, considering plans for the reduction of expenses in large cities, expresses considerable satisfaction with the action of the Commissioners. This is not alone because Mr. Lermitt himself favors the contingent commission plan, but also because he believes it will help bring about agreements with the large city agents. He expresses the conviction that if the companies and the agents do not settle this expense question soon the States will take a hand. The action of the Commissioners, he figures, will have somewhat the effect of serving notice on the insurance men that they must get busy and may make those with pronounced views more conciliatory.

It is expected that by the end of this month or at any rate early in November the various committees appointed to visit the excepted cities will have begun their negotiations with the agents.

From expressions by some of the

large city agents at the recent meeting of the National Association of Local Agents, agents in at least some of the large cities will endeavor to secure an agreement for a reduction of multiple agencies as compensation for a reduction in commissions. If this is done it will create a new bone of contention for some managers who are very anxious for a reduction in commissions are also given to appointing agents by the score in the larger cities.

* * *

Announcement that the Northwestern Department of the Aetna at Omaha would be closed on December 1 did not cause any overwhelming surprise. It has been believed for some years that that department would be continued only so long as the two old men, General Agent W. H. Wyman and Assistant General Agent W. P. Harford, continued in condition to run it. When President Clark made his recent trip to Omaha it was at once suspected that it was more than a friendly visit. Mr. Harford is very ill and his recovery is doubtful, while Mr. Wyman's health is not good.

After the first of December Minnesota, Iowa, Missouri, Oklahoma, Kansas, Nebraska, South Dakota, North Dakota, Wyoming, Colorado and New Mexico will be added to the territory of the Western branch at Chicago under General Agent Thomas E. Gallagher. While Mr. Gallagher has held a prominent place in managerial circles for years, this extension of his jurisdiction will make his one of the big departments and give him added influence.

Mr. Gallagher, by the way, has made a notable record with the Aetna. When he was called to management, along with N. E. Keeler, of the Western Department in 1897, the Aetna did not cut the figure its age, strength and standing entitled it to cut. It had been exceedingly conservative in its underwriting policy in the West and was not popular with agents. Mr. Gallagher built up a strong field force, liberalized the underwriting policy, made the company popular and increased its lines. Then the branch office was moved from Cincinnati to Chicago, a farm department was opened, the writing of automobile floaters was taken up and the company is recognized as one of the leaders in the West. With about seventeen States under his jurisdiction Mr. Gallagher will be in control of an immense business.

* * *

The reinsurance of the Shawnee and the developments since the reinsurance continue to be the talk of Chicago fire insurance circles. The opinion is freely expressed that henceforth the insurance departments are going to supervise with more care than they have been doing. It was only about two years ago that disgrace was brought upon the Ohio department by the failure of the Ohio German. A year ago the Phenix disclosures added nothing to the lustre of past administrations of the New York department. Now Kansas is held up to scorn for its laxity. It must be dawning upon those Commissioners who have not been over-diligent that they have got to "be on the job all the time" or suffer in their reputations.

More vigorous administrations of the insurance departments is what the solid companies want. They have nothing to fear from it unless some

Commissioner misconstrues his duty into the useless and annoying splitting of hairs over technicalities which in no wise affect the solvency or honorable management of companies. On the other hand, it is largely the companies whose soundness is not assured that are the greatest nuisances in the field. If the application to them of strict tests should result in compelling them to restrict their operations to fields that could be managed economically it would clear the underwriting atmosphere materially.

* * *

Experienced farm underwriters in the West are skeptical as to the success which is going to attend the farm operations of some companies which have entered the business within the last few years. There is a strong temptation even to small companies to write farm insurance, as the demand for farm companies is so great that agents will take in farm companies that they would not look at if they did not write farm business. While large companies already well planted do not need this additional inducement to agents so badly, they, too, are anxious for business, and they know that the writing of farm risks can be used as a lever to get considerable other business out of agencies. Companies with the most experience maintain that the utmost care is necessary in order to make farm business profitable. It is known that in some of the States the farmers' mutuals get the cream of the rural business. After them the stock companies with well-seasoned agency plants and experienced underwriters come in for their share. It is claimed that the company which lets its agents write the farm policies or which has not learned which are the districts to leave strictly alone are in a good way to get the scum of the business. This was one of the troubles with the Shawnee. Many of its agents in some States wrote farm risks freely which experienced farm companies would not even have considered.

* * *

Surprise was occasioned in Chicago

casualty circles last week, when a daily newspaper announced the appointment of Burras & Goodbody as resident managers in Chicago for the Pacific Coast Casualty. For several weeks early in the Summer the company had been negotiating with Brummel Brothers, fire agents, to take the general agency, but as Brummel Brothers did not succeed in securing a man satisfactory to the company to handle its business in their office the negotiations fell through. Mr. Burras is an attorney and was a Vice-President of the Consolidated Casualty up to the time of its reorganization last Spring. Mr. Goodbody

was assistant cashier of the Hamilton National Bank until its recent merger in another institution.

* * *

The lunch club composed of representatives of most of the liability companies which write automobile insurance in Chicago has resumed its luncheons after the Summer vacation. So beneficial have its results been on the automobile business that representatives of several companies which do not write automobiles have joined, as they see that the closer relations among the members are benefitting the general liability situation.

LA SALLE.

A Solution for Fraternal

IN its closing session at Mobile the National Convention of Insurance Commissioners ratified an agreement with the fraternal insurance societies and approved a bill which is the result of concessions on both sides.

While inadequate rates are not increased at once, the work of education of the fraternal membership on their necessity is begun and the advance will come gradually and without shock. So far as the all important rate question is concerned, the approved bill which each Commissioner is expected to introduce in his own State provides that after 1912 each society shall report to the Insurance Department an actuarial valuation of its certificates, with the national fraternal congress table of mortality as the minimum basis of valuation.

This will show the liabilities of the society under its outstanding certificates. Since with most of the inadequate rate societies, this will reveal a heavy deficiency in the amount that should be on hand, it is provided that this is not to be regarded as a test of financial solvency. Each society is to be considered solvent so long as the funds on hand are in excess of its

matured liabilities, without regard to future obligations. Beginning in 1914 a report and explanation of this valuation is to be sent to each member. This is to educate them to the need for higher rates, and after 1917 the succeeding valuations are required to show a reduction of at least 5 per cent each three years in any deficiency which may exist. If this is not shown and no good reason is given the Insurance Department may cancel the license or begin proceedings for the dissolution of the order.

Societies which do not show the required degree of improvement must stop taking in new members at the old rates, admitting them thereafter only at adequate rates, keeping the funds separate. This is designed to insure eventual solvency and it is believed will save a desperate situation. The representatives of the National Fraternal Congress, which has stood for adequate rates, and of the associated fraternities of America which wanted the rate question alone by the law, are pledged to the compromise bill and to assist the Commissioners in seeking its enactment into law.

A few days previously their agreement seemed hopeless, the Associ-

ated Fraternities having repudiated their agreement, but the Commissioners threatened much more drastic action, and they yielded. With their fight out of the way, the bill agreed upon met a lively contest on the floor of the Commissioners' convention. New York and Pennsylvania opposed it on the ground that their present fraternal laws were better than the new proposition, that their minority report was defeated and the bill was approved, twenty-two States favoring it and five being opposed. Reau E.

Folk, Insurance Commissioner of Tennessee and chairman of the Fraternal Committee, has led in the long fight, while Charles E. Piper, of Chicago, former President of the National Fraternal Congress, has been his chief ally among the fraternalists. The Modern Woodmen, with more than a million members, and the Woodmen of the World, with a half million, have pledged official support to the bill. More than 90 per cent of the members of the Illinois Legislature, for instance, are Woodmen.

First Steel Building

IN THE erection of a building in Chicago twenty-seven years ago by the Home Insurance Company of New York it appears, from an article in the "Boston Transcript," that the construction of the first steel-skeleton building was due to the enterprise of an insurance company. The article sets forth how well this type of building has stood the tests of fire, wind and earthquake.

Steel-skeleton construction of buildings, which has now spread not only all over this country, but in many parts of the Old World and revolutionized the iron industry, originated in Chicago. The first building of the kind was erected twenty-seven years ago in that city at the corner of Adams and La Salle streets, from plans by W. L. B. Jenney, a prominent architect, who had been commissioned that year to design a structure to be erected for the Home Insurance Company, and which was to be provided with the maximum of well-lighted offices above the second floor. The claim that to Chicago belongs the honor of building the first edifice of steel, was disputed for a number of years—fourteen or fifteen years, at least—before it was conceded to that city and its distinguished architect. F. T. Gates, President of the Bessemer Steamship Company, with offices in New York, made a close investigation of the subject, and in 1897 not only admitted the claim, but named one of the company's new steamships, the W. L. B. Jenney, in honor of the inventor. President Gates recognized Mr. Jenney as a world benefactor and so expressed himself time and time again. To the late George A. Fuller, the well-known contractor, was given the credit by his biographers of being the inventor of the steel construction, but this error was caused by the fact that he was among the first contractors to erect buildings of steel frame skeleton.

When the Home Insurance Company found itself in a position to require a large and more important building, one that would give the space desired and at the same time be confined to the lot of land upon which to erect the structure, Mr. Jenney was

called upon by the officers of the company to prepare plans. He was told by the President of the company that he wanted the maximum of well-lighted office rooms above the second story, adding that he was well aware of the fact this would make the piers between the windows too small too carry the loads. Mr. Jenney studied carefully the subject and drew plans for a steel building. The stone lintels over the openings were carried on steel which rested on masonry, and it soon became manifest that it would be imperative to put metal columns within the piers. Then came the question of expansion and contraction of these continuous columns, 150 feet long, and exposed to a possible variation of 120 degrees. It occurred to the architect to carry each story independently, story by story, on each column, thereby dividing the expansion of the columns by the number of stories, reducing the percentage of expansion in each story to such a degree as to be of no consequence. The architect's plans were only favored by one of the company's agents, an eminent engineer, General A. C. Ducat, now of Ducat & Lyon, in charge of one of the Western agencies. He indorsed the plans, constructively and economically, and the architect was told to go ahead. The building cost \$700,000, and is one of the landmarks of Chicago to-day. At first cast-iron was used, but before the insurance company's building was one-third up steel became plentiful and was used for all the upper stories. All the lintels over the openings extended on both sides to the columns resting on brackets and bolted to lugs on the columns. All the girders rested on and were bolted to the columns. By that system a perfect skeleton was produced; that is to say, it was a structure in which each story, with its floors, partitions and outside walls, was carried independently. Since that structure was built hundreds of others

have been erected in the Windy City. The second steel skeleton building built was also in Chicago, but it was four or five years after the World's Fair, before architects and builders in the East began to take notice, and it was still later before it attracted attention in Europe. One of the most interesting exhibits at the Paris Exposition was a model of a steel skeleton building shown by the George A. Fuller Company.

It is beginning to be believed that the steel skeleton building is indestructible. Steel skeletons have gone through fire and received only 1 per cent of damage. In the tornado it withstands all blasts. No earthquake has yet injured a steel skeleton except to shake loose the bricks and other encasing materials. Many people some years ago were positive that electricity will eventually corrode and destroy a steel skeleton. No such case has as yet been reported, and it is doubtful if it ever will. In the first place the steel skeleton is thoroughly covered with masonry and therefore cannot come into contact with the electric wires, and, in the second place, electricity costs so much that the electric companies take good care that there shall be no leakage. In view of the experiences of the last twenty-five years it is probable that the steel skeleton will be as enduring as the pyramids. It may be necessary, some time in the future, to remove the masonry and give the frame a new dress, but that will be about all.

All know the effect upon the steel market after the new system became a fixed fact. All are familiar with the enormous increase of the steel output, the vast amount of money that flowed towards the steel plants, the great expansion and the colossal fortunes made by those who invested. For twenty years the mills have been running night and day and are never ahead of orders.

No New York employer need look beyond the advertising columns of THE CHRONICLE for LIABILITY INSURANCE.

In New England

BOSTON, Oct. 5.—The two hearings advertised for last Thursday by the Massachusetts Commission on compensation for workmen receiving injuries in employment, came off according to schedule. Broadly speaking, those that appeared before the commission might be divided into two camps, namely, employers or their representatives speaking for a contributory plan, and representatives of workmen's organizations favoring a non-contributory system, as far as the employees are concerned.

Rear-Admiral Bowles, for the Fore River Shipbuilding Company, described the plan of mutual insurance in vogue in his plant, the men paying a certain percentage of their wages to the insurance fund, which is handled by a Board of Directors elected by them. He said that about 75 per cent of all accidents in the shipyards were due to negligence of workmen, about 5 per cent were to be charged to the company's fault and about 20 per cent were unavoidable. Admiral Bowles said he would like to see a law enacted permitting joint contributions by employers and employed to meet compensation claims.

Everett Morse, an employer, stated that the firms now pay enough to the insurance companies to make a fair compensation to the workmen, but doubted if his men had received 5 per cent of what had been paid for the insurance.

F. W. Mansfield, for Stationary Engineers' Union No. 16, urged that it would probably be unconstitutional to compel any man to accept compensation, and that the courts would rule upon the first occasion that a man had the right to stand upon his constitutional privileges.

President Rotiwell, of the Boston Chamber of Commerce, thought there was no question that a compensation law was needed and that the cost under it should be borne by production, not by the public through pauperiza-

tion. He read a resolution urging that such legislation be made uniform with that of other States, and was supported in this view by H. R. Bailey, of the Uniform Legislation Commission.

Walter C. Fish, of the General Electric Company, believed that the contributory system, as outlined by Admiral Bowles, stands for the best there is in American citizenship and that workmen want it.

Arguments for a non-contributory system of compensation were made by J. J. Carney for the Hotel and Restaurant Employees' Association, and J. W. Sherman, Henry Sterling and other labor representatives spoke against any system under which the employees have to contribute. There were also speakers who advocated the establishment of a state fund from which to draw the kind of compensation under discussion.

New England Brevities.

Dewick & Flanders have been appointed by the Fidelity and Deposit its representatives for plate glass, accident and health and burglary insurance lines in Boston and the metropolitan district, O'Brien & Russell continuing as the company's resident agents for surety business.

The first reports on the fire loss to the sawmill of Palmer & Parker in the Charlestown section of Boston last week were greatly exaggerated. The damage is now placed at \$30,000, fully covered by insurance, and that is quite enough, too.

Following an examination by the Massachusetts Insurance Department, which showed assets of \$183,409, total liabilities (including \$100,000 capital) of \$174,495, and net surplus of \$24,719 (surplus to policyholders \$124,719) the Massachusetts Accident Company, of Boston, was last Monday admitted to Illinois. The company will establish a branch office at Chicago,

in charge of Robert B. Thorne, formerly identified with the London Guarantee and Accident.

The Massachusetts Fire and Marine has appointed W. H. Markham & Co. its agents at St. Louis, and Brockway Brothers will represent the company at Kansas City, Mo.

The Employers' Liability has appointed Conklin & Zoune, of Minneapolis to represent it in that city, following the resignation of Wilson & Force, who have taken up the liability branch of the United States Fidelity and Guarantee, in addition to the fidelity and surety departments of that company.

Topics to be discussed at the October meeting of the Boston Life Underwriters' Association are: "The Impression the Insurance Solicitor Makes Upon His Prospect," by a representative of the Boston Chamber of Commerce; "The Field," by Charles E. Fish, of the Phoenix Mutual, and "The Insurance Agent Vs. the Insurance Man," by P. V. Baldwin, of the Travelers.

Boston shippers and marine underwriters are greatly pleased at the favorable response of the Government to their petition for marking Broad Sound Channel in the harbor by lighted buoys at night. It is expected that this needed improvement will be established in a week or ten days.

Robert A. Boit, who needs no introduction to insurance men of Boston, returned to the city last week after an eventful Summer in Europe, which included an encounter with Italian brigands, but looking none the worse for that experience.

EMIL SCHWAB.

BRUCE COMMITTEE QUERY.

The Legislative Investigating Committee has expressed to the manager of the New York Insurance Exchange its wish for copies of the rating schedules, the handbooks and other information as to the method of making fire insurance rates in this city.

IN RE PAUL VS. VIRGINIA.

(Continued from Page 1.)

will never correct its position is to indulge in a species of judicial idolatry. No one has expressed the proper attitude which citizens should maintain toward decisions of the Supreme Court so well as Abraham Lincoln did when expressing his views of the Dred Scott decision. He said:

"It is not resistance; it is not factious; it is not even disrespectful, to treat it as not having yet quite established a settled doctrine of the country. * * * The court that made it has often overruled its own decisions, and we shall do what we can to have it overrule this. We offer no resistance to it."

"This is the attitude of those who advocate Federal control over interstate insurance. Moreover, the history of the Supreme Court itself shows us that relief has frequently been had because the court has absolutely reversed doctrine which it had earlier laid down. This is has done several times and on matters of even greater moment than those involved in the case of Paul vs. Virginia. Let me cite two or three cases.

"In 1825 Justice Story decided (Chief Justice Marshall concurring) that the admiralty jurisdiction of the Federal Government was limited to the ebb and flow of the tides. In 1851, in the case of the *Genesee Chief*, the court absolutely overruled this doctrine and held that Lake Ontario was not only commercially but legally navigable, and the same court has since applied the same doctrine to rivers and canals.

"Again in 1847, the Supreme Court intimated that in the absence of Congressional action, interstate commerce could be clogged and impeded by State legislation; in 1867, in the Iowa liquor cases, this doctrine was emphatically repudiated by the same court, which declared that in the absence of Congressional action interstate commerce should be free. Again, the Supreme Court at one time held that the Government could not issue a legal tender note; later on it reversed itself and held that it could, and, as a result of that, we have a national bank currency and a system of national banks, and no currency issued by State banks. Again, the court held that an income tax was constitutional; then one judge changed his mind, and such tax was made unconstitutional.

Believes Chaos Would Result.

"To say, therefore, that the Supreme Court will never reverse itself in the case of Paul vs. Virginia, is a mere expression of opinion, against which there is overwhelming evidence to the contrary. Mr. Jones' opinion

that the court probably ought to reverse itself—though wrong—because of the chaos which it would produce in every State in the Union is little less than amazing. If the Supreme Court had listened to that contention, it would never have held that the general Government had the right to issue a legal tender note. The position which the court took in the legal tender decision was in effect this:

"Having undertaken to supply the country with a stable currency, it (meaning Congress) may prevent the circulation as money of any notes not issued under its authority by taxing all other issues out of existence."

"This, of course, was a ruthless disregard of the chaos among the States and the banks of the several States which might follow the declaration of such a doctrine. As a matter of fact, chaos then ruled and the legal tender decision brought a great and enduring order.

"If the Supreme Court should now overrule the doctrine of Paul vs. Virginia, instead of producing chaos, it would banish chaos. Chaos is the one word which properly describes the present attempt to supervise an interest which is common to all the States, and substantially identical everywhere, by forty-eight separate, sovereign, supervising authorities.

Amendment Not Needed.

"Therefore, I disagree with Mr. Jones in his conclusion that the only remedy is an amendment to the Constitution. The fact is that the Supreme Court is erecting from day to day a body of definitions, precepts, rules of action, etc., which amount to a Federal common law. This the court itself emphatically declared in the great case of *Kansas vs. Colorado*. In other words, an unwritten constitution is growing up here in substantially the same manner that the Constitution of England has grown up.

"All the decisions of the Supreme Court which involve the question of what is and what is not interstate commerce have steadily approached the doctrine that all business transactions between residents of different States is interstate commerce. One of the latest and most notable utterances of the court on this subject is in its recent decision declaring that the work of a correspondence school is interstate commerce.

"I agree with Mr. Jones that it is doubtful whether Congress will legislate on the theory that interstate insurance is interstate commerce so long as the doctrine of Paul vs. Virginia stands. But it may do so. It would be warranted in doing so. First, because insurance in its present relations to the business of the country has never been fully discussed before the Supreme Court; and, second, because a business which seemed to the court in 1868 not to be inter-

state commerce, if fully presented to the court, to-day might appear differently. Indeed, I go farther than that. I maintain that because of the development of the country through the railroads, the telegraph and the telephone, a business which fifty years ago might not have been interstate

commerce may be interstate commerce now.

"When justice and national development have demanded such action the Supreme Court has always been big enough to change its mind. Why should we conclude that it is no longer as big as it was in 1851."

N. Y. LIFE VS. DEER LODGE CO.

THE complaint as drawn up in behalf of the New York Life Insurance Company in the United States District Court of the Third Judicial District of the State of Montana against Deer Lodge County makes eleven allegations, which are in full as follows:

First. That said plaintiff, New York Life Insurance Company, now is and ever since the year 1845 has been a corporation duly organized and existing under and by virtue of the laws of the State of New York for the purpose of and engaged in transacting the business of insurance on lives and all and every insurance pertaining to life and receiving and executing trusts and making endowments, with its domicile, principal office and place of business in the city of New York in the State of New York; that said plaintiff calls its said principal office in the city and State of New York its Home Office and in this complaint Home Office means said principal office in the city and State of New York; that said plaintiff for many years last past has been engaged in transacting its said business on a large scale with persons residing in every country of the civilized world, and in all the States, territories, districts and possessions of the United States.

Second. That the defendant, Deer Lodge County, is a political subdivision of the State of Montana, organized as a County under and by virtue of the Constitution and Laws of said State.

Third. That in the year 1869 said plaintiff, commenced to transact its said business with residents, citizens and inhabitants of the Territory of Montana, and continued uninterruptedly to do so during the remaining existence of the Territory and from the inception of the State of Montana until the present time, and is still so engaged therein; that in the year 1883 there existed contracts of life insurance made and entered into between the plaintiff of the one part and several residents, citizens and inhabitants of said Territory of the other part aggregating the sum of, to wit, \$600,000, which called for pre-

mium payments aggregating, to wit, \$20,800 annually; that the amount of said outstanding insurance contracts between the plaintiff and several residents, citizens and inhabitants of said Territory and State has progressively increased and amounted to the respective sums and called for premium payments annually in the several years below named, as follows, to wit:

Year.	Total Insurance in Force in Montana.	Calling for Premiums Aggregating Annually.
1893 . . .	\$3,582,272	\$109,429
1895 . . .	3,729,927	112,152
1897 . . .	4,861,608	150,388
1907 . . .	10,089,370	343,545
1909 . . .	10,023,445	343,664.93

That said total insurance is made up of several policy contracts averaging, to wit, \$2,000 each; that said several policy contracts are subject to sale, assignment and transfer, and to use as collateral security and for other commercial purposes, and they are a common subject of sale, assignment and transfer, and of use as collateral security, and for other commercial uses, and are valuable for each and all of said purposes and for other general purposes of trade and commerce.

Fourth. That said business is now being and always has been done and carried on through the agencies and in manner following, to wit:

(a) Said plaintiff now has and ever since the year 1869 has had in its employ in said Territory and State special agents authorized to solicit applications for insurance, to collect the first premium and to deliver the policy on applications taken by them, provided the Company after considering such applications at its said Home Office prepared and transmitted the policy to such agent for said purpose. The several employment contracts of said agents were made in writing directly with the Home Office and did not take effect until they were countersigned by the Contract Registrar of the plaintiff at its Home Office.

(b) The plaintiff also now has and for more than fifteen years last past has had in its employ in said State a

person known as Agency Director, who was employed by contract in writing directly with the Home Office through the mails, and whose authority is limited to supervising the work of the soliciting agents, to recommending to the Home Office the employment of persons who desire to become soliciting agents for the plaintiff, and to soliciting applications for new insurance.

(c) The plaintiff has and ever since the year 1869 has had in its employ in said Territory and State sundry physicians and surgeons called Medical Examiners appointed by the proper officers of the plaintiff at its Home Office, their said employment having been negotiated and made by correspondence through the mails. The authority of said Medical Examiners was and is limited to making physical examinations of applicants for insurance, to recording the results of such examinations, and to transmitting their said reports as such Medical Examiners to the plaintiff's Home Office where alone a rating is put upon the risk and the applicant's insurability passed upon and determined. If the Medical Examiner's Report is incomplete or further information is required, the Home Office obtains further information by correspondence through the mails and by express. No Medical Examiner in Montana has ever been authorized to accept or decline a risk. This is and always has been done at the Home Office based upon the data obtained as aforesaid and upon other data similarly obtained.

(d) Said plaintiff also has and for more than fifteen years last past has had in its employ in said State in various localities a confidential employee called an inspector, who is employed directly from the Home Office, whose employment is intended to be secret, and whose duty it is to furnish, and who does furnish, the plaintiff at its Home Office by mail information about the habits, character, standing and other elements of moral hazard of persons applying to the plaintiff for insurance on their lives.

(e) Said plaintiff now maintains and for more than fifteen years last past has maintained in the City of Butte in said State an office which is in the immediate charge of an employee who is appointed from the Home Office and known as Cashier. The authority of said Cashier is limited to making and supervising the making of such records as the business of said office requires, to receiving from soliciting agents and from Medical Examiners within said State applications for new insurance and medical examinations solely for transmission to the Home Office of the plaintiff, to receiving from the plaintiff's Home Office the report of its action on such applications, to receiving from said Home Office and transmitting to the solic-

No property owner need look beyond the advertising columns of
THE CHRONICLE for FIRE INSURANCE.

iting agent who took the application new policies of insurance, to receiving such premiums as are paid on new policies issued on the lives of persons residing or being within said State and as are not transmitted directly to the Home Office, to mailing to the persons residing within said State such premium notices as the plaintiff makes out at its Home Office and sends to said Cashier for that purpose, to receiving renewal premiums from policyholders within said State whenever such cashier is specially authorized by the Home Office to do so and the policyholders elect to pay them there instead of remitting directly to the Home Office where all premiums are by the terms of the policy contracts made payable, to depositing said premiums to the credit of the plaintiff in Bank in Butte to be drawn upon not by him but by the plaintiff from its Home Office on Thursday of each week, to notifying the Home Office daily of the sum that day deposited by him in Bank, and to keeping account of the insurance obtained by the several soliciting agents in said State and, under the direction of the Home Office, settling with such agents their commissions earned in obtaining new insurance. Said plaintiff has never had any office or place of business for any purpose within said Territory or State except said office in the City of Butte and except also for a short time a similar office in the city of Helena, which, however, it abandoned, to wit five years ago.

The foregoing are all the agents, agencies or representatives of any and every kind the plaintiff has or ever has had within said State.

(f) It is, and always has been, the custom and practice of the plaintiff to prepare at its Home Office and transmit, and it does prepare and transmit, to its several said employees within said State forms for use in the several transactions in which said employees are authorized as aforesaid to engage, and the plaintiff keeps its said several employees supplied from its Home Office through the mails or by express with said forms.

(g) No agent or representative of the plaintiff in Montana has ever been authorized to accept risks of any kind, or to make, modify or discharge contracts, nor has any agent or representative of the plaintiff within said State ever done any of said things. All the officers of the plaintiff reside and have always resided in and near the city of New York and had their several offices and places of business at said Home Office except one of them who resides in Paris, France, and has his office and place of business there, and no one of them has ever resided or had a place of business in Montana. All risks are, and always have been, accepted and contracts made, modified and discharged by the officers of the plaintiff at its Home

Office and not elsewhere. Said risks and contracts with policyholders residing or being within the State of Montana have each and all been negotiated and the several contracts made, modified, continued and performed in manner following, to wit:

(1) When one of said soliciting agents takes an application for insurance he takes it in writing on a form prepared at the Home Office and transmitted to such agent for said purpose. The applicant is then physically examined by one of the plaintiff's said local Medical Examiners, who reduces said examination to writing on a form prepared by the plaintiff at its Home Office and transmitted to said Examiner for said pur-

pose. After such medical examination is made and reduced to writing as aforesaid and signed by the applicant and the Examiner, then said application and said Medical Examiner's Report are transmitted from said State to the Home Office of the plaintiff in New York for consideration. If the plaintiff at its Home Office after there examining and considering said application and Medical Examiner's Report is satisfied with the risk, it then and there writes up a policy contract in accordance with said application and forwards it through the mails to said State and if the Inspector's Report when received is found to be satisfactory the plaintiff then directs the delivery of the policy and collection of the first premium. Said first premium, if not remitted directly to the Home Office by the policyholder, is delivered to the plaintiff's Cashier at Butte and is by him deposited in Bank at Butte to the credit of the plaintiff and is drawn out of said Bank by draft drawn by two officers of the plaintiff at its Home Office on Thursday of each week.

(2) Said policies each and all in consideration of the payment of the premiums called for therein obligate the plaintiff to pay the amount of insurance therein named at the Home Office of the Company in the city of New York upon receipt at said Home Office of satisfactory proofs of the death of the person named therein as the insured. They also each and all provide that all premiums are payable in advance at said Home Office or to an agent of the Company upon delivery on or before the due date of the premium of a receipt signed by the President, a Vice-President, a Second Vice-President, a Secretary or the Treasurer of the company, each and all of whom are officers of said plaintiff. Said policies also each and all provide that no agent has authority to waive forfeitures, to make, modify or discharge contracts, or to extend the time for paying a premium; that none of these things can be done except by an officer of the plaintiff at its Home Office.

(3) At least fifteen and not more

than forty-five days before the maturity of each premium the plaintiff mails to the policyholder a notice advising him of the due date of the premium, the amount to be paid, and stating therein that the same must be paid to the plaintiff at its Home Office or to the Cashier of its office in Butte on or before the due date, otherwise the policy will be forfeited and void. The plaintiff prepares and checks up said premium notices at its Home Office and transmits them by express to its office in Butte, where they are again checked up and mailed to the several policyholders.

(4) Said policyholders pay their premiums either directly to the Home Office through the mails or to the Cashier of the plaintiff's office at Butte. If payment is made to the Cashier of the plaintiff's office at Butte, said Cashier at once deposits the same in Bank to the credit of the plaintiff's account and daily transmits through the mails to the Home Office notice of the several sums by him that day received and deposited in Bank. On Thursday of each week two officers of the plaintiff at its Home Office draw a draft for the full sum accumulated in Bank to the plaintiff's credit as aforesaid, which said draft is transmitted through the mails and returns thereon are duly received by the plaintiff at its Home Office through the mails. No person in said State has ever had power or authority to draw on said Bank account. The plaintiff keeps another Bank account in said City which is limited to a maximum credit balance of \$500 on which alone said Cashier is authorized to draw checks and which is used solely for paying the current expenses incident to the maintenance of said office in Butte.

(5) Said several policies provide for advances or loans to the policyholder on the pledge of the policy as security, and pursuant to said provision the plaintiff has outstanding advances or loans made to its policyholders in said State aggregating the sum of, to wit, \$432,878. For more than ten years last past the plaintiff has had outstanding advances or loans to policy-

holders in said State aggregating a large sum. Said loans have each and all been made by the policyholder transmitting to the Home Office of the plaintiff an application for the loan, which said application the plaintiff considered and acted upon at its Home Office, and if it accepted it the plaintiff made out at its Home Office a loan agreement which it forwarded by mail for execution and after executing it the policyholder forwarded the loan agreement and the policy to the Home Office and on receipt thereof at its Home Office the plaintiff forwarded the proceeds of the loan by mail to the policyholder within said State by the plaintiff's check drawn to the policyholder's order on its Bank account in the City of New York. In this same manner the plaintiff is continuously making advances to its policyholders in Montana.

(6) When a policy matures as an endowment, the sum to be paid is calculated by the plaintiff at its Home Office and a check for the amount thereof is drawn to the order of the policyholder on the plaintiff's Bank account in the city of New York and is sent to the policyholder through the mails and is by him duly indorsed and deposited in Bank in Montana, which in turn duly transmits it to New York for collection and credit or return.

(7) Proofs of death are made on blanks prepared by the plaintiff at its Home Office in New York and transmitted to the claimant for the purpose of preparing such proofs and after completing them the beneficiary transmits them through the mails to the plaintiff at its Home Office where they are examined, and if found to be satisfactory the plaintiff pays the loss at its Home Office by drawing a check to the order of the beneficiary on its Bank account in the city of New York, which said check it transmits through the mails to such beneficiary in the State of Montana, who on receipt thereof forwards to the plaintiff the policy together with receipt for its proceeds and deposits the check in Bank which collects the amount of the check as in the case of

the payment of matured endowments.

Fifth. All the business of the plaintiff now doing or hitherto done within said State, or with residents, citizens or inhabitants thereof, is and has been done in manner and form as aforesaid, and plaintiff is informed and believes and upon information and belief says that said business is interstate intercourse, and is commerce among the several States within the meaning of that clause of Article 1 or Section 6 of the Constitution of the United States which invests the Congress with power to regulate commerce among the several States.

Sixth. Nevertheless on, to wit, the 8th day of March, 1883, the Territorial Legislature of the Territory of Montana passed an Act entitled "An Act Regulating Insurance Companies," which contained Section 37 in words and figures, following, to wit:

"Sec. 37. Each and every insurance company transacting business in this Territory shall be taxed upon the excess of premiums received over losses

and ordinary expenses incurred within the Territory during the year previous to the year of listing in the county where the agent conducts the business, properly proportioned by the company at the same rate that all other personal property is taxed, and the agent shall render the list and be personally liable for the tax; and if he refuses to render the list, or to make affidavit that the same is correct to the best of his knowledge and belief, the amount may be assessed according to the best knowledge and discretion of the assessor, and the County Board of Equalization may, at their discretion, add 50 per cent to the amount returned by the assessor. Insurance companies shall be subject to no other taxation under the laws of this Territory except taxes on real estate and the fees imposed by Section thirty-two of this Act. And all moneys received from such insurance companies in payment of taxes, as provided for in this section, shall be applied to the maintenance of the fire department of the town or city where such business shall be carried on, if there shall be such fire department there established. If not, then such moneys shall be paid into the general fund of such county."

Seventh. Said Section 37 of said Act of 1883 became Section 600 of the Compiled Statutes of Montana of 1887.

Eighth. In the Montana Constitutional Codes and Statutes of 1895 said Section 37 which formed the aforesaid Section 600 of said Compiled Statutes of 1887 was contained in said Code as Section 681, but as so continued was in words and figures following, to wit:

"Sec. 681. Each and every insurance corporation or company transacting business in this State must be taxed upon the excess of premiums received over losses and ordinary expenses incurred within the State during the year previous to the year of listing in the county where the agent conducts the business, properly proportioned by the corporation or company at the same rate that all other personal property is taxed, and the agent shall render the list, and be personally liable for the tax; and if he refuses to render the list, or to make affidavit that the same is correct to the best of his knowledge and belief, the amount may be assessed according to the best knowledge and discretion of the assessor. Insurance companies and corporations are subject to no other taxation under the laws of this State, except taxes on real estate, and the fees imposed by law. Said Section 681 now constitutes Section 4073 of the Revised Codes of Montana, 1907."

Ninth. Said plaintiff did not have any property within said County at any time during the year 1910. Said plaintiff for and during said year 1909 paid without protest the tax imposed by Section 4017 of the Revised Codes of Montana, which said tax aggregated the sum of \$6,933.41, and down to July 1st, 1910, duly paid the two quarterly instalments called for by said section, which aggregated \$3,

496.85. It also during said year paid to said State licenses and fees aggregating the sum of, to wit, \$234.

Tenth. Nevertheless, during the year 1909 the plaintiff received from policyholders residing within said Deer Lodge County premiums which aggregated the sum of \$14,233.41. The insurance losses sustained by the plaintiff on policies on the lives of persons residing within said County during said year 1909 and the ordinary expenses incurred by the plaintiff in said County during said year aggregated the sum of \$8,888.41. The excess of premiums so received over losses and ordinary expenses incurred with said County during said year was the sum of \$5,345. In the year 1910 the County Assessor of said County, claiming to act by and under the pretended authority of said Section 4073, placed said plaintiff on the assessment roll of said County as then and there the owner and possessor within said County of personal property of the amount and value of said sum of \$5,345, and thereupon the taxing authorities of said County made a levy of thirty-nine mills upon each dollar of said valuation and assessment for said County and School purposes and there and then imposed a personal tax against the plaintiff for said purposes amounting to the sum of \$209.79 based upon said excess of premiums received over losses and ordinary expenses, and thereafter made demand upon said plaintiff for the payment of said tax; that on the — day of —, 1910, the plaintiff paid under protest to the County Treasurer of said County said sum of \$209.79. A copy of said protest is hereto attached marked "Exhibit A."

Eleventh. Said tax was and is illegal, unlawful and void for that

Said defendant was without jurisdiction to levy or collect said tax, and the levy and collection thereof was and is a burden upon interstate commerce contrary to Section 8 of Article 1 of the Constitution of the United States.

Wherefore, Said plaintiff demands judgment against said defendant for the sum of \$209.78, with 8 per cent interest therein from the day of, 1910, and costs.

WILL OF M. S. DRIGGS.

The will of Marshall S. Driggs, long President of the Williamsburg Fire Insurance Company and a director in many financial institutions, was offered for probate in Brooklyn. Most of the estate, which is estimated at more than \$1,000,000, is left in equal shares to Elliott F. Driggs and Silas W. Driggs, brothers of the testator, and Amelia A. Driggs, widow of his deceased brother, Edmond Driggs. The Title Guarantee and Trust Company and Silas W. Driggs are executors. The will cuts off any heirs who may contest it.

National Protective Legion Report

THE New York State Insurance Department made public in Albany, on Monday, the following statement as to its report of an examination of the National Protective Legion, of Waverly, N. Y.:

This is one of the larger fraternal beneficiary societies operating in the State. It began business in 1891, and by making a specialty of the so-called five-year dividend or endowment certificate, had outstanding, in 1907, 230,-

530 certificates of all classes, representing probably about 200,000 members. In the words of the report, the five-year dividend contract "appealed to the gambling instinct and promised the impossible." In 1902, the Legislature so amended the Insurance Law that fraternal societies could not thereafter be organized for the purpose of doing this class of business, but exempted from the effect of such amendment the three societies then writing contracts of this class. One of those was the People's Mutual Life Insurance Association and League, of Syracuse, which was forced into liquidation by the insurance department last January; the other is the Order of the Golden Seal, with headquarters at Roxbury, N. Y., and the third is the National Protective Legion.

The examination is made as of June 30, 1910, and the report thereon is voluminous. The financial statement shows that while, under the insurance law a society of this class is not entitled to maintain a reserve, the National Protective Legion, with substantially \$1,700,000 on hand to meet maturing obligations, is technically solvent, granting that the 83,000 five-year dividend contracts now outstanding are met by dividends no larger than are being paid in 1910.

This society now issues three classes of certificates, one of them being that already indicated, and the others granting death and disability benefits similar to those given by many other fraternal beneficiary societies. Much the largest proportion of this society's business is, however, of the five-year dividend class. The report discusses the history of such business at length, calling attention to numerous facts which have led actuaries, insurance departments and thoughtful legislators to condemn it, not only in New York but in other States. It instances the fact that this society has been barred from several States because of this class of business; that, in 1902, it was refused a license in Michigan, but in 1903 secured an amendment to the Michigan insurance law requiring the Commissioner of that State to license it; that in 1906 its license, for a similar reason, was revoked in Wisconsin, and in 1907, not renewed in Minnesota and Virginia; also the difficulties which it had with the Ohio Department in 1904, as well as two separate investigations by the Federal post-office authorities, one in 1907 and the other in 1908. The repeated recommendations of the New York Insurance Department that the law of this State be so changed that this and other societies could no longer continue this class of business are also mentioned, the last of such efforts be-

ing in the recent Legislature.

The report states that the five-year dividend certificates, on which a member paid, during the five-year period, substantially \$133, and under which he was meanwhile entitled to death and sick benefits, had been, prior to 1907, matured at the end of the period at, for several years, about \$285, and during recent years, \$250; that such a return to certificate holders was mathematically impossible, save by using the contributions of later members to pay the dividends of those whose certificates matured first;

and that as a result of the action of the Federal Government and the various State departments, the governing body of the National Protective Legion, in September, 1907, amended its constitution so that thereafter dividends were not to be determined arbitrarily but as the result of a mathematical calculation. The payment of excessive dividends had, however, gone on so long that it was found that the funds of the order had been seriously depleted and that certificate holders whose contracts matured from 1908 to 1912, inclusive, could receive but about \$73 instead of \$250. In spite of this mathematical calculation, the society, on advice of its counsel, declared a dividend in 1908 of \$113.08, the payment of which further depleted the fund belonging to members, with the result that, on an examination by the New York Insurance Department, as of June 30, 1908, it was found that it would take \$5,521,000 more than was then on hand to mature the society's outstanding certificates even at \$113.58. As a result of this examination and of further action by the Federal post office authorities, the dividend for 1909, which still continued at the last mentioned figure, was in 1910 cut to \$51.12, on a total contribution by the members of about \$113.

The report calls attention to the effect of these reductions on the membership and assets of the society, as well as to the tremendous lapse rate recently found therein. Thus, its five-year dividend certificates are 83,835, as against 229,329 three years ago; of 69,116 certificates written in 1907, but 17,183 are now in force; while in April, May and June, 1910, upwards of 24,000 certificates were lapsed. Indeed, for the first six months of the last mentioned year the certificates lapsed were more than five times those written, and upward of 41,000 certificates were lapsed in 1909.

The report also calls attention not merely to the decreased revenue of expenses, but to the corresponding fact that, short of large expenditures to district organizers and local deputies, it is utterly impossible for this society to check its decline as a five-year dividend society. Comment is further made upon the injustice to

the five-year dividend members of using the expense fund accumulated by them in carrying on and developing the other classes of insurance written by the society, a practice which has depleted the fund that really belongs to the five-year members, by many thousands of dollars each year.

When as the result of this examination the condition of the society was formally brought to the attention of its officers it was notified that, unless prompt steps were taken to remedy such conditions, the department would apply for permission to take possession of and liquidate it, as had been done by the department in the matter of the People's Mutual Life Insurance Association and League.

The society, therefore, has entered into a definite understanding with the department whereby, first, it will at once discontinue any effort to write these five-year dividend contracts, and totally cease the writing of them not later than January 1st next; second, it will, at its next national convention, authorize a reincorporation of the society so as to eliminate from its charter whatever right it now has to write five-year dividend contracts; and, third, it will submit to such convention the facts showing the injustice of using the funds of certificate holders of this class to promote the other classes of business written by the society, and request action leading to an equitable distribution of its expense funds in the future.

The Insurance Department will again, in its annual report to the Legislature, recommend legislation which will positively prohibit the writing of such contracts, not only by fraternal beneficiary societies doing business in New York—of which, as above indicated, there are now two—but by such co-operative assessment associations as are now authorized to write contracts of this class, of which there are several still offering them to the public.

The criticisms of the examiners are directed chiefly to the five-year dividend business of this society. Its other business, which of late has been featured, is thought to promise the benefits to certificate holders.

Accident Policy Ruling

THE Insurance Departments of New York and Massachusetts issued a circular of rulings and suggestions last week relative to the forms of health and accident policies to be filed with such departments for approval. The so-called uniform health and accident provision bill became a law in these States through action of their Legislatures in 1910. It will probably become a law in many of the States next year. Its purpose is to standardize certain provisions in insurance policies of this class and to prevent the use of other provisions that have been found unsatisfactory or delusive.

The rulings and suggestions given out to-day phrase for the insurance companies the so-called nine standard provisions and indicate the views of the departments as to certain other provisions generally found in policies of this kind. Two notable changes in the practice of health and accident companies will probably be accomplished as a result of these rulings.

Heretofore it has been the custom of most casualty companies to dispense with applications signed by the proposed insured, but in lieu thereof there has been printed on the back of the policies so-called schedules of warranties, purporting to be statements

made by the insured at the time of the application, but in reality filled in by the agent, and to the truth of which the insured is bound by the terms of the policy on its being accepted and paid for by him. The two departments have ruled that this practice must be stopped; that schedules of warranties will no longer be permitted; and that, while casualty policies can be written without formal application, if there is a written application, it must be signed by the insured. It is also suggested to the

companies that the application forms be so phrased as to direct the attention of the insured specifically to the representations made therein.

It has also been the custom of companies of this class to insert clauses in their policies to the effect that the issuance of a new policy on the same as much as the insured has by the insured shall cancel every prior policy written by the same company. In terms of the old policy often acquired a vested interest in certain benefits that he could not get from

the new policy, it has been thought wise to suggest the reversal of the rule. Hence, the departments suggest that there be inserted in all new policies written after January 1 next a clause to the effect that such policy shall be void in case the company already has a policy on the insured, unless the new policy contains an endorsement to the effect that the prior policy may be continued in force.

The time for the companies to file their 1911 policy forms has been extended to October 15.

Court Upholds Workmen's Compensation Act

IN A decision handed down by the New York Supreme Court in Erie County, Justice Pound has just held that the Workmen's Compensation Act of 1910 (Chapter 674) is constitutional. The case, which brought the question of the constitutionality of the act squarely before the court, was that of Ives vs. South Buffalo Railway Company.

The plaintiff stated in his complaint that he was employed as a switchman by the South Buffalo Railway Company and was injured in the prosecution of his work without negligence on his part, and without serious or wilful misconduct, but solely by reason of the necessary risk or danger of his employment.

The defendant asserted that the act was unconstitutional. Prior to the enactment of the statute of 1910, the plaintiff would not be entitled to recover anything, so that the sole question before the court was as to whether the statute was constitutional. The act was attacked on the ground that it unduly discriminated against railroads, and other employments classified as dangerous employments. The court held that there was no discrimination, that the classification was a sound one, and not frivolous. The next point raised was that the act imposed a liability without fault.

Justice Pound cited a number of other instances in which the common law imposed a liability without fault, such as the liability of the husband for the torts of his wife, or a master

for the acts of the servant, and holds that this did not make the act unconstitutional. The court held that the act came within the principle laid down by Holden vs. Hardy, 169 U. S. 366, and which was recognized in the case of Lockner vs. New York, 189 U. S. 45, which is the case recently criticised by President Roosevelt, and cited this case as an authority for upholding the constitutionality of this act.

Bob's Remarks

THE reported dishonest work in the local office of a large foreign company, regarding return premiums, it is stated, does not apply to the cashier's "cage," but to the accounting department. With all the methods in use for checking cash transactions in large corporations, it would seem strange that, as appears in this case, crooked work could have gone on undiscovered for a period of months—even years; and yet we all know about the weakest link in the chain often causing a great deal of trouble.

* * *

In this connection it may be stated that the custom in England is not to pay return premiums. A policy once issued for a year or less, stands good until expiration. Even if the risk is that of a warehouse or storage store hazard and the merchandise has been sold, without any further liability on the part of insurance companies, there is no such thing as cancellation by the assured and return premium for unexpired time. That would seem curious in this country.

* * *

Much street comment still continues about the last reinsurance—Shawnee—and the probable next one or others to follow before next December. Already brokers are laying plans to protect their clients in the event of a considerable number of retirements. Several of the prominent and larger companies have recently indicated a willingness to increase lines, and this action will aid brokers in their endeavors to provide for expected or possible withdrawals. It is stated that the amount of premium necessary to relieve the Shawnee of its outstanding liability, on the basis of about 35 per cent was nearly \$400,000.

* * *

Between \$150,000 and \$200,000 will be expended by the Liverpool and London and Globe Insurance Company in the construction of its new office building and chief Pacific Coast department in San Francisco.

* * *

In the combination of the Continental, Fidelity-Phenix and Fidelity Underwriters a tremendous agency representation is at once apparent. President Henry Evans, in his circular to agents, states that "about twenty thousand agents hold the commission of these companies and nearly two hundred special agents and adjusters are employed in the field." This is really an army of workers for a great, successful and progressive aggregation of assets amounting to more than twenty-three millions of dollars.

* * *

Recent decisions by the Insurance Departments of New York and Massachusetts, regarding applications for

accident insurance indicate that the signature of the beneficiary must be obtained. From what brokers state, this will change very much the matter of soliciting and for many reasons. They assert, among other things, that it is not always wise or necessary that the beneficiary should know too much.

* * *

It is proposed to increase the capital stock of the United Firemen's Insurance Company of Philadelphia from \$200,000 to \$400,000. This is in line with the progressive ideas which have been assuming much strength in that company within the past few months.

* * *

The election of F. H. Way as President of the Williamsburg City Fire Insurance Company, succeeding the late Marshall S. Drigge, is a worthy recognition of long and valuable services to the company. Acting as Secretary of the company for a long period, and having been connected with the institution for nearly forty years, it was a fine tribute to his abilities and underwriting experience.

* * *

The Royal Exchange Assurance is now under examination by the New York Insurance Department.

* * *

Shareholders of the United Firemen's Insurance Company will shortly be called to vote at a special meeting on a proposition to increase the capital stock from \$200,000 to \$400,000.

* * *

At a special meeting of the People's Surety Company, J. H. McCoey was elected President of that company, filling the vacancy caused by the resignation of J. H. Sell.

* * *

Manager William H. Tolman, of the Museum of Safety and Sanitation, who has just returned from abroad, states that the next international congress on accident insurance and employers' liability will be held in the United States, probably in 1913.

* * *

Monday was a red letter day for New York City. Particularly as to fire losses it was a record day for the year—boroughs of Manhattan and Bronx. Manhattan was the chief sufferer. With the aggregate damage of nearly \$1,000,000 reported for the day, and, according to the fire patrol records for thirty years past, showing an average annual loss for the two boroughs of about \$700,000, it would appear that something like one-seventh of the yearly destruction had occurred on October 3. This without taking into account the fires which have been reported so far this year and those which are to follow between now and December 31. BOB.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

Computing Annual Term Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:

Divide endowment insurance values by immediate temporary annuities. For these purposes the "select and ultimate" will be most useful.

Computing Annual Pure Endowment Premiums:

Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities. By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:

Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:

Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:

Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:

Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:

Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.

Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.

Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.

Surrender Values.
Dividends.

HOTCHKISS AFTER PROMOTERS; UNITED FIRE HAS \$18,000 LEFT

WILLIAM H. HOTCHKISS, Superintendent of the New York State Insurance Department, has practically completed the investigation of corporations organized for the purpose of promoting insurance companies, which during the last three months has been actively prosecuted by such department. This investigation was due to an amendment of the Insurance law, made on the recommendation of the department, which went into effect on July 1 last. By it, holding and promoting companies which intended ultimately to form or control insurance companies are subject to examination in the same way that insurance corporations heretofore have been.

This amendment was intended to check if possible in New York a flood of irresponsible insurance corporations like those during the last three or four years developed by promotion methods in the Middle Western, Southern and Pacific States. This new sort of get-rich-quick craze seems not to have reached New York until about midsummer in 1909. Hence, the number of promotions of this class in New York is less than was expected, and few of them have yet reached the stage when many people are involved or relatively much money wasted.

Four Albany Reports

WITHIN the last week four statements have been issued from Albany, summarizing the results of the investigations of promotions, so far as the reports are ready for the public. These summarized statements, dated as given out, follow:

A Batch of Promotions.

ALBANY, Oct. 6. — Superintendent Hotchkiss announced to-day that while there are still a few of these promotions to be examined, investigation of most of them is finished and the reports will shortly be available to the public. Among the companies examined are:

The United Insurance Company of Arizona and its subsidiary, the United Fire Insurance Company of New York.

The Protective Holding Corporation and its subsidiary, the Protective Fire Insurance Company, both New York corporations and with headquarters at Syracuse.

The Manhattan Funding Company and its subsidiary, the Life and Casualty Company of New York.

The Fire Securities Company and

its subsidiary, the First National Fire Insurance Company of Pennsylvania, the former being a New York corporation.

The Trinity Finance Company, incorporated under the laws of Maine.

The Hanover Finance Company, incorporated under the same laws.

The Independent Surety Company, a New York corporation.

The Government Surety and Casualty Company, also a New York corporation.

The Reliable Life Assurance Company of Indianapolis.

The Columbia Guarantee Corporation, also a corporation of this State.

Some facts have been developed also as to two corporations which formerly had offices in this State, viz.:

The Consolidated Life Securities Company and its subsidiary, the Consolidated Life Insurance Company, both understood to be Illinois corporations.

The National Assurance Company of Wilmington, Del.

The laws of New York do not permit an insurance company to begin business until its capital stock is paid in in cash. It must also have a sur-

plus—likewise paid in in cash—equal to 50 per cent of its capital stock. This is not so in many other States, and, consequently, insurance promotions have been much easier elsewhere. This probably also explains why, in many of the promotions investigated, there is a holding company, the purpose of which is to accumulate the cash, and an insurance company, which has a name, by-laws and officers, but which has as yet received no authority to transact the business of insurance.

The plans of most of the companies investigated are essentially the same and usually almost identical with plans used in other States. These plans consist of: (1) The organization of what is at first nothing but a stock selling company, whose only asset usually is the cash representing its stock, and in some instances a contract whereby such company will become the underwriting agent of the insurance company when the latter shall be authorized to write business; (2) literature, with deckle or gilt edges, morocco covers, embossed seals and alluring figures placing enthusiastic estimates as to probable profits, but based often on false statements of actual gains by existing

(Continued on Page 7.)

George F. Seward Discusses Renewal Ruling

GEORGE F. SEWARD, President of the Fidelity and Casualty Company, in the course of a discussion of the question of the possible ruling by the Insurance Departments of New York and Massachusetts that the terms of the standard provisions law for accident and health insurance policies of those two States will be applied to renewals of policies issued prior to January 1, 1911, has this to

say in the main:

A mere statement of the question reveals at once to any one acquainted with the business the seriousness of the suggestion and the many difficulties of carrying out such a ruling. We think it is manifest that neither the Insurance Commissioners who originally suggested this law nor the Legislatures which passed it had any thought of making such a requirement.

This legislation was suggested by the Insurance Commissioners' Convention, and was the subject of long and careful consideration, first, by the Insurance Commissioners themselves; second, by the Commissioners in consultation with representatives of the insurance companies, and finally, by the Insurance Commissioners among themselves in the light of the previous discussions. An enormous amount of accident insurance exists under the form of renewal of previously issued policies. With this fact the Commissioners were thoroughly familiar, and could not have lost sight of it. If they had intended to include renewals of existing business within the provisions of the act they would certainly have so stated explicitly. They have not so stated, but, on the contrary, have confined the law to policies to be issued. Throughout the long discussion of this proposed legislation, a discussion which extended over about two years, no one, as far as we can recall, ever suggested that the provisions of the proposed legislation should apply to renewal of policies previously issued. That under these circumstances no such provision was inserted in the bill shows clearly that it was not intended.

Before this bill became a law it was carefully and fully considered by the committees of the two houses of the New York and Massachusetts Legislatures. Here again no suggestion was ever made that the provisions of the bill should apply to renewals of existing policies. If the Legislatures had had any thought of making it so apply, it would have been a simple matter to have inserted a provision explicitly to that effect. That a subject of such enormous importance as that of the renewal of existing business was not distinctly provided for in the bill, is, we submit, the strongest possible proof that the Legislatures did not intend the provisions of the act to apply to such renewals. Had such a suggestion been made to the Legislatures the companies could easily have shown that such a requirement would cause such great injury both to the companies and to the present policyholders that we cannot doubt that the Legislatures would have discarded the proposition without a mo-

ment's hesitation.

To hold that a renewal of a previously issued policy is a policy of insurance within the meaning of this law leads necessarily to the conclusion that there can be no renewal of any accident policy hereafter. If a renewal is to be treated as a policy, then the provisions which the law says must be printed in every renewal hereafter. The renewal must be issued upon a signed application,

A PENN MUTUAL PREMIUM, less a PENN MUTUAL DIVIDEND, purchasing a PENN MUTUAL POLICY, containing PENN MUTUAL VALUES, make an INSURANCE PROPOSITION which in the sum of ALL ITS BENEFITS is unsurpassed for net low cost and care of interests of all members.

and must conform in all respects to the law and to the Insurance Commissioners' rulings. Would not this practically make it necessary to issue a new policy? A renewal which contained all these things and complied with these provisions would be very nearly as long and as bulky as an original policy. There would be no advantage in using the renewal form. Consequently, the practical effect of such a ruling would be to prevent the use of renewals as we now know them. Anything that would prevent the use of renewals would mean the revocation and overthrowing of a course of business that has been established for many years, and has been found satisfactory to the companies and to the insuring public, and has never been found productive of any harm. It will make necessary a procedure that will add greatly to the cost of conducting the business.

This is a *reductio ad absurdum*, but it necessarily follows if the words "policy of insurance," as used in the law, means a renewal.

Such a ruling would greatly increase the company's expense. The increased expense to the company of such a construction of the law would not merely be the expense of clerical work. It would necessitate the sending of a solicitor to each policyholder in order to explain the change of form and to secure a signed application. Even this would not be all. It is doubtful whether a solicitor whose business is considerable could promptly visit one-half of his old clients for

such purpose. There would thus be great sacrifice of his time and a great loss to the company by reason of the many policyholders that the solicitor either could not see or find. There would also be a heavy loss of the new business that would ordinarily come in through that solicitor, because of the time that he would have to give to recanvassing the old business. There would also be many cases in which the solicitor would not be able to find the policyholder, by reason of his absence from his home or his customary place of business or perhaps from the country. In short, the loss of business to the company by reason of such a ruling would be very great. This is not a matter of speculation. It can be stated with absolute accuracy. Again, observe the effect of such a ruling upon the interest of the policyholders.

The use of renewals has made it possible to keep alive for years insurance which the assured needs and to which he cannot give immediate attention. People who carry accident and health insurance are, of course, often away from home, perhaps travelling in foreign countries. They go away evidently without giving a thought to the expirations of their policies, in reliance upon the agents to secure the renewals or upon the credit given by the companies on renewals, a custom of years. At such a time such persons stand in greater need of the insurance than at any other time. If new policies are to be issued or if signed applications are required such absentees will necessarily

be left without insurance. This is not an extravagant statement. Necessarily, if a company has, as many do, thousands of persons scattered all over the world insured against accidents, to require that the policy cannot be continued without a signed application from the policyholder is bound to cut a large number of them out of their insurance at a time when they most need it and cannot help themselves.

Obviously, a great shock will be given to the business by such a ruling, and a great shock to insurers. It is safe to say that, saying nothing about expense, the business of the company would be greatly cut down and the policyholders would be seriously injured.

Furthermore, there has been no demand on the part of the policyholders for any such ruling or for any change from the past custom in respect to renewals. There is no allegation that a policy of accident insurance may not be renewed under any necessary or reasonable interpretation of the standard provisions law. There is no reason why added work and expense should be put upon the companies and the solicitors. There is no reason why a procedure should be demanded that will deprive many policyholders of insurance.

Is it not reasonable to ask that the law, in its essence as it was enacted, be left for awhile, so that results may be observed rather than provisions be added by arbitrary ruling, which experience does not sanction, and which will certainly be productive of harm.

In New England

BOSTON, Oct. 12.—Under the heading "The New City Regime" an observer, who is evidently quite familiar with municipal conditions in Boston, has been giving the results of his studies to the public in the columns of the "Boston Transcript." His contribution to last Thursday's issue touches on a matter of special interest to the underwriting fraternity, namely, the Fire Department. It is the opinion of this writer that during the incumbency of Acting Commissioner Carroll a relaxation of discipline took place, for which Mr. Carroll cannot be held responsible, but which still offers a condition that the new Commissioner, Mr. Cole, will have to meet. It is also noted that, with the various privileges now enjoyed, the department as a whole is in a chronic state of shorthandedness. This is not to be wondered at, as the granting of immunities as to supper hours and the like has been a favorite device of cheap politicians in order to curry favor with the men of the department. This observer further notes that the lack of men has become so serious that a practice has grown up of sounding second alarms in the

downtown section for small fires, not so much because the apparatus is needed as because the men that go with it are required to help out on the undermanned first-call apparatus. The Russell Club also comes in for a share of criticism as having developed into a quasi-political organization, an imperium in imperio, so to speak, and as such very likely a drawback to the efficiency of the service, and the disbandment of which, it is suggested, should be accomplished by a mass of Commissioner Cole's military training.

The Boston Finance Commission is making investigations into a number of matters brought before the Municipal Council by the Mayor in consequence of the big lumber fire of last August, namely, high pressure water service, laws relating to wharf construction, creation of a reserve fire signal system, the adequacy of the present building laws, and the necessity of an increase in the membership of the Fire Department.

The recent fire in an apartment house on Oxford Terrace, built a great many years ago, revealed that the interior construction was of wood

framing, encased in substantial looking brick exterior walls. This has aroused the attention of the Fire Commissioner to the necessity of preventing further construction of the kind. The writer of these lines has in mind a very handsome looking block of stone front dwelling houses in a fashionable section of the city, recently completed, but the interior of which revealed nothing but a lot of match wood while they were under construction, there being not even brick partitions to separate the several houses of which the block is composed. The need, therefore, does not seem to be entirely the adoption of new building laws, but rather a thoroughgoing enforcement of those which are already upon the municipal ordinance books of the city.

The Boston Board.

At last Tuesday's meeting of the Boston Board of Fire Underwriters E. C. Brush, H. H. Soule, W. F. Giersch, A. K. Pope and H. T. Campbell were appointed a nominating committee to report a board of officers for election at the annual meeting of the board on November 8. H. T. Campbell, Adam Archibald and E. Lloyd Greene were appointed to serve on the rating committee for three months. E. M. L. SCHWAB.

EMPLOYERS' LIABILITY INSURANCE ABROAD

By Miles M. Dawson

VIII. THE INSURANCE OF EMPLOYERS IN BELGIUM

(Copyright, 1910, by Miles M. Dawson.)

RUSSELS, Sept. 2, 1910.—In many particulars the law of Belgium, rendering the employer liable for the death or injury of an employee by an accident arising out of and in the course of the employment is modelled upon the law of France. Thus, as in France, the employer is entirely freed from liability if insured in a licensed accident insurance company of the domicile. But there is no Government guaranty, as in France; neither is insurance confined to Belgian companies.

There are two large, successfully managed and thoroughly responsible stock companies in Belgium, which were already engaged in employers' liability, as well as accident insurance, when the compensation act was passed. These have continued in business under the new law, doing a conservative and reasonably profitable, though not extraordinarily extensive, business. Several other stock and mutual companies have also entered the lists, and the important companies of other countries, especially Great Britain, Holland and Switzerland, which were also doing business in Belgium before the compensation law was enacted, have continued their operations.

The advantage which the licensed and certified Belgian companies have—viz., that only by insuring with them can an employer be wholly freed from liability—is very great and real. But, while undoubtedly it has given them a preference in competition, it has not enabled them to monopolize the field. This is no doubt partly due to the great financial strength of the other companies and the general confidence in their entire solidity and reliability. But it is yet more due to the fact that the Belgian companies have sought to avoid the usual mistake of making the rates too low at the outset and so causing a great initial loss to themselves. In other words, they were warned by the experience of British companies on their British business and French companies on their French business.

Their prudence and farsightedness appear to be demonstrated by the results. They have not lost money, but, instead, though doing a limited business, have made a good profit; and the other companies, though taking at

reduced rates a very considerable share of the business, have scored great losses.

Commissions are kept down to 10 per cent, and the total expenses, as in France, are scarcely more than 20 per cent. In other words, the leading Belgian stock companies use for expenses, aside from commissions, scarcely more than the economically conducted Norwegian Riksforsikring anstalt or the employers' associations of Germany.

Like France, Belgium has a state insurance department in which an employer may insure if he wishes—i. e., if he wishes very much to do so. He will find it even more difficult than in France, however, and the Belgian State Department does, in fact, virtually no business at all. This is because the other companies fill the bill and also because no effort whatever is made to bring the department forward.

This want of effort is not due to disabling legislation, as, for instance, the French law requiring a formal Presidential edict to make changes of rates. On the contrary, the law is wisely liberal and the department could conceivably do whatever is necessary in order to attract business. Neither is there any lack of skill or ability in the management; on the contrary, the head of this department is the very man who has most successfully managed the Caisse d'Epargne et de la Retraite, which also receives savings deposits and sells life annuities and life insurance in both of which branches it has accumulated tremendous amounts and transacted an immense business.

These very facts have their bearing upon the department's having virtually no employers' liability or workmen's compensation insurance at all. The postal savings bank and the state annuity and life insurance department both have for their clientele chiefly workingmen and their families. For this same department to be adjusting and contesting accident claims, urged by these same people, paring them down or resisting them, would endanger the popularity and success of all the branches. Therefore, it remains quiescent.

The Belgian companies make use of the Austrian "key number" method of rating, adapting it to the facts of their

experience and changing the classification of the various classes of industries accordingly. They had a considerable body of carefully sifted data concerning workmen's collective insurance, before the compensation act took effect; and their ability to leave to foreign companies the unprofitable lines and to select the risks which enable a profit to be made, is due in no small part to their superior knowledge of the nature and hazards of the business.

The Belgian companies, fearing that there would be a repetition in Belgium of the unsatisfactory experience as

to magistrates' judgments in France, favored the creation of special courts, consisting of laymen, half representing the employers and half the employees, with a judge to preside and act as referee. This was turned down, however; and, strange to say, the magistrates have proved to be very cautious about making allowances. It is estimated that, in cases of partial disablement, they have averaged to find the impairment of earning power a materially less percentage than in Austria where the method, asked for by the companies, is in use.

IX. THE PECULIAR INSURANCE SYSTEM OF HOLLAND

(Copyright, 1910, by Miles M. Dawson.)

THE HAGUE, Holland, Sept. 8, 1910.—In many respects the most remarkable accident insurance law in Europe is that of Holland. It is not merely compulsory insurance, but compulsory state insurance, and yet with choice of companies. This sounds very much like a paradox, yet it is thus explained:

The law created the Rijkverzekeringsbank, a state insurance department, in which every workman for wages in certain specified industries is, by virtue of his mere employment, insured. If he suffers by reason of an accident occurring while he is at work it must be reported to this institution, which must investigate the matter, allow and pay the indemnity; and the like is true in event of his death by accident—i. e., the pensions to widows and orphans must be paid by the Bank.

Moreover, the employer is, by virtue of the mere fact that he is the employer under obligations to the Rijkverzekeringsbank for the premium, computed according to its tariff upon his payroll, and the payment of this premium may be enforced by the authorities.

But the employer may, upon request, be permitted to assume the risk himself or to insure it with a stock company or a mutual company, provided he or it gives the required security to the Bank and complies with its requirements in other regards.

The security which the employer or the company, as the case may be, must give to the Bank, which must still adjust all claims and be liable for them, consists of the deposit of such amount of assets, invested as required by law, as the directors of the state institution may deem necessary. In addition, the employer or insurance company must pay the share of the state institution's expenses apportioned to it, must reimburse all claim payments made

by it on behalf of such employer or company because of temporary disability indemnities, etc., and must deposit with it cash or approved securities equal in present value to all pensions payable to permanently disabled workmen and to widows, orphans and other dependents of deceased workmen.

In other words, the state is directly and immediately liable. It must investigate, adjust and assume all claims. But premiums may be paid to private companies if desired, not for insurance, but really for reinsurance of the state, which yet remains the insurer.

All claims in Holland, therefore, are paid by the state. The workmen and their dependents have no relations as regards these indemnities with anybody else. Payments are made through the postal banks and all premiums, payable to the Rijkverzekeringsbank, are collected through the postoffices. For this there is no charge. All mail and messages, whether telegraph or telephone, likewise, sent by or to the Rijkverzekeringsbank, are free of charge. The Government also out of other funds pays half the remaining expenses of the bank. The rest is apportioned between the bank and the private insurance companies, as the directors deem proper.

This amounts to a pretty severe discrimination against the private insurance companies, which must pay commissions to agents and collectors, and are chargeable with their own postage and telephone and telegraph tolls. Yet some of them, both stock and mutual, have so far held a good share of the business.

The method of rating is a modification of the Austrian, i. e., a system based upon a "keyrate" under which rates are fixed by classes and the keyrate modified from time as well as the classification varied.

The state department also was automatically the insurer of all risks, whether good or bad. In attempting to fix its rates low enough to compete it scored considerable

416-18-20 Walnut St., : PHILADELPHIA, PA.

losses at first; and then, before learning how to discriminate accurately—which, indeed, in view of its public nature, it may never be able to do—it raised its rates. This accounts in good part for the continuance of successful private company competition up to the present time. The strongly individualistic tastes and notions of the Dutch people also play a part, as do the facts, first, that insurance is very popular, and, second, co-operating in insurance institutions is a national habit.

In any event, though the state institution is doing well and embraces a very large volume of business, private companies, though handicapped with larger expenses, are able to discriminate more closely and intelligently as to rates and so to command a very large share of the best business.

The adjustment and payment of all losses by the state department, their competitor, is one of its obvious and enormous advantages. The Bank also has power to make all the apportionments of expense charges and to fix all capital values, to cover which deposits must be made. The state, however, reserves on the same basis. All these make against the private companies in competition. There is complaint also that the state adjustments—which, however, are made really by boards, consisting of an equal number of representatives of employers and of employees,

with a government appointee as chairman—are lax; and it is asserted that direct adjustment by the companies would reduce the amount of successful simulation and malingering.

The disability benefits in Holland are a larger percentage of the wages than in any other country—70 per cent, as against 66.2-3 per cent in Germany and only 50 per cent in Great Britain. The proposed act in Switzerland will fix it at 80 per cent, it is understood. The small margin between one's earnings and what he may draw as disability indemnity may, it seems, materially increase both simulation and malingering.

In Holland also benefits are payable from the first day, provided only the employee is disabled for at least three days. This, of course, very considerably augments the cost, as compared with insurance in countries where from four to as high as thirteen weeks must elapse. The state department may pay short period claims on the usual certificates, but must investigate if the disability appears on the face of the notice likely to last longer than six weeks. If investigation is neglected there must, it seems clear, be much successful short period simulation and malingering; yet investigation might cost much more than it would save, which is the usual objection to paying for short periods.

New England Brevities

AMONG Boston visitors this week was George B. Woodward, a Vice-President of the Metropolitan Life, and in the days of yore Secretary of the John Hancock. Despite his long residence in New York, Mr. Woodward cherishes a soft spot in his heart for the Hub, in which his earlier days were spent.

* * *

A demand for the insurance of aeroplanes is being met by Field & Cowles, of Boston, through their marine department, the Insurance Com-

pany of North America writing policies on these machines to cover damage from fire or collision. The rate is 2 per cent a year, and a machine built by the owner can be insured for the full cost, but one bought of a manufacturer can be written for only 75 per cent of its cost.

* * *

"Arrived at Gibraltar, Manuel can insure in the Prudential," quoth one of the mad wags of the Boston Transcript.

* * *

Frank O. Bristol, formerly identified with the Northwestern Mutual Life, has been appointed General Agent of the New England Mutual Life for Southern California, with headquarters at Los Angeles.

* * *

At Cincinnati Earls & Johansing have been appointed to represent the Massachusetts Fire and Marine, and Edwin O. Izant is appointed its agent at Lansing, while at Grand Rapids Harrison B. Carr will care for its interests.

* * *

The Old Colony Insurance Company of Boston has been admitted to California.

* * *

On December 2 the Northwestern branch of the Aetna of Hartford will be consolidated with its Western department, the headquarters of which are at Chicago.

* * *

The Insurance Library Association hopes to have Assistant Secretary Coffin, of the German-American, to address it on the topic of "State Rate-

Making" at the opening meeting of the season.

* * *

At New Haven H. K. Rowe, formerly identified with the Farmers of York, becomes special agent of the Rhode Island Fire, the Union of Paris and the National of Paris for Southern New England.

* * *

Henry S. Henckel, of Indianapolis, has been appointed State Manager for Indiana of the Massachusetts Bonding.

EMIL SCHWAB.

HOTCHKISS AND PROMOTERS.*(Continued from Page 1.)*

companies—the whole both a credit to the printer's art and as persuasive in rhetoric as it is usually pervasive in distribution; (3) a crowd of soliciting salesmen—some of them, if possible, drawn from the field forces of insurance companies—who hawk their wares from house to house upon representations sometimes based upon the literature furnished and sometimes upon their imaginations, at an expense to the ultimate stockholders of from 20 to 60 per cent of the amount subscribed, a process which is somewhat varied in one or two companies by the use of a system whereby stock is sold through the mails, such system being less expensive; and (4) a contract entered into at the time the two companies are formed whereby, for a long period of years, the entire control of the insurance company will be vested in the promoting company as an agency corporation, which contracts, in several instances, seem to have been made without regard to the ability of the promoters as insurance managers, and, in some cases, are apparently entered into that the same may be sold for the benefit of the promoters themselves.

The investigation, therefore, makes it clear that the promoter and his satellites, the stock salesmen, almost immediately take from 20 to 60 per cent of the money subscribed by the investor; that the means employed in securing the subscription are, of necessity, at times—in fact, in some companies frequently—characterized by misrepresentation both as to the profits of existing companies and as to the probability of profit in the promoting company; and that, if the plan ultimately succeeds, the investor finds himself but a minute factor of a company usually controlled by the man who conceived it, who is, in most cases, only too willing to sell out that control to the highest bidder, no matter what the latter's integrity or insurance experience.

The above facts and conclusions

are thought by the department to be typical of what has become a widespread movement looking to the organization of new insurance companies, firstly and chiefly for the benefit of the professional promoter, and to the great injury of the investing public at large. For these reasons, the reports following the various examinations will when filed be given wide publicity, and the co-operation of the public in informing the department as to promotions of which it may not yet have received notice is respectfully urged.

In view of the facts developed on this investigation, the New York Insurance Department has, since July 1, refused to admit to do business in this State any company promoted by the means above indicated, and will continue so to do unless it is satisfied that the management of such company is reliable and expert from an insurance standpoint and that its stockholders have been definitely informed that they, and not the company, paid the usually large commission and promotion expenses incident to such methods. It is thought that, by excluding those thus tainted in their organization, much can be done toward preventing similar promotions in the future.

A Syracuse Proposition.

ALBANY, Oct. 12.—The report of the examiners on the Protective Holding Corporation of Syracuse was filed yesterday. This company was organized in November, 1909, for the purpose of securing subscriptions to its capital stock to finance the Protective Fire Insurance Company. It has been found that up to last May the company sold its stocks through agents, and that this was a decidedly expensive operation. Since that time a plan of reaching the public by mail has been adopted and a reduction in expenses to about 15 per cent of the gross amount of subscriptions has been the result, according to the statement of the department.

The examination, which was made as of July 31, showed an actual cash income of \$66,570.15, against actual

cash disbursements for advertising, commissions, printing, salaries and similar items of \$38,559.67. In the first stage of its existence Ira A. Manning, of Philadelphia, directed the management. He has retired and stock is being sold under the mailing plan by Wightman & Dudley, who have offices at 437 Fifth Avenue, in New York.

The report shows that the corporation has cash assets amounting to \$26,263.08, and subscription notes of \$45,196. There are also unpaid instalments for which subscription agreements are outstanding, amounting to \$96,927.71. The cost to its subscribers to accomplish these things has been \$47,843. The department's examiner thinks that a conservative estimate on the reduced basis of cost will mean a total outlay for subscribers of from \$600,000 to \$750,000 out of a total of \$2,500,000, to be paid in for surplus of the fire insurance company.

The report adds that the prospectus of the company contained misleading information and that the agency contracts were subject to criticism from the department, but that the company has been ready to correct the abuses which existed before the examination was made.

Frederick S. Dudley, of Wightman & Dudley, yesterday admitted that the charges made were substantially true, but said that the statement was inaccurate in some particulars. He calls attention to the statement that the organization expenses under the present plan will be 15 per cent. "We have claimed," said Mr. Dudley, "that the total organization expense will not exceed 8 per cent."

"Under our present plan the commission paid for the sale of stock is 5 per cent. The other expenses we do not believe will be more than 3 per cent."

The organization revolves around the Tuttle Underwriting Agency of Syracuse, which is said to be the largest non-board fire insurance agency in the State.

An agency contract between the Protective Holding Corporation and the Tuttle concern gave the latter the power to represent the fire insurance

The year of 1910 is rapidly drawing to a close, this being the last quarter of the year.

The amount of money earned by the agents of the Philadelphia Life from now until the end of the year will more than equal the total earnings of agents of other companies for the year 1910.

If you are in a position to contract with the Philadelphia Life at this time, it would be to your interest; or, if you contemplate making a change at the close of the year, let us hear from you now, as perhaps the territory that you would prefer would be closed at that time.

Write Perry To-Day.

company for fifteen years. This contract has been modified so that the firm of Tuttle, Wightman & Dudley will represent the fire company for one year in a considerably smaller territory.

An Exodus of Promoters.

ALBANY, Oct. 8.—It was stated at the State Insurance Department today that one of the more notable results of the recent investigation by such department of holding and promoting companies, pursuant to the new law which became effective July 1, was the sudden exodus from the State of some of the companies which had previously been operating therein. The bill did not become a law until late in June, the first public announcement of it being made on the 27th of that month. In two instances at least companies which had been operating in New York cancelled their leases and went elsewhere about the 29th of June, or two days before the Insurance Department had authority to examine. In other cases active solicitation of citizens of New York by stock salesmen representing companies of this class ceased shortly after the law became effective. Companies which thus apparently were neither incorporated in the State nor had offices for the transaction of business therein on July 1 were, however, investigated, to determine whether the department had jurisdiction to make an examination. In this way, facts to which the public is entitled were brought out as to three companies, viz.: The Consolidated Life Securities Company of Illinois, the American National Selling Organization, and the National Assurance Company of Delaware.

The first two—The Consolidated Life Securities Company being a promoting company organized for the purpose of accumulating, through the sale of its stock, a fund whereby a life insurance company, to be known as the Consolidated Life Insurance Company (understood to be already chartered in the State of Illinois, though not yet doing business), might be formed, and the American National Selling Organization, which is apparently merely a sales agency for the first mentioned corporation—seem to have commenced operations in New York in October, 1909, and from that time to have done a fair business in placing stock. When an attempt to examine these companies was made, however, it was found that the contract between the two was cancelled late in June. Asked where the books were, the answer was, "Gone to Chicago." Asked for samples of the literature used, "It has already been sent to Chicago." Asked where the officers of the Consolidated Life Securities Company were, "They have gone to the same place." Asked who its officers were, the reply was, "There are none now in the State."

AGENTS WANTED FOR UNOCCUPIED TERRITORY

PROSPEROUSLY BUSY!

Our agencies are steadily increasing this year's lead over the figures of our high record in 1909.

Our agents are prosperously busy. With Business Life Insurance and our unequalled Continuous Monthly Income policy they are reaching and satisfying the public and liberally rewarding themselves.

Inquiries invited from delivering producers.

GEORGE D. LANG,

Superintendent of Agencies,

Massachusetts Mutual Life Insurance Company,

Incorporated 1851.

Springfield, Massachusetts

Asked what the location of its office was, the answer came that it now had none in New York.

It developed, however, that, prior to some day late in June, 1910, one Max Sonnenschein, the Secretary, and one Lichtig, the Treasurer of the Consolidated Life Securities Company, had offices with the American National Selling Organization at 258 Broadway, New York, and had sent out literature and circulars therefrom, in an effort to promote the sale of the stock of the company. Also that some time previously the Consolidated Life had its principal office at Oneida, N. Y., and that, at that time, Charles E. Renwick was its President. Minnie E. Scully—now of Scully & Co., a corporation at the same address and which corporation has succeeded the American National Selling Organization as the representative of the Consolidated Life—stated to the representatives of the department that the Consolidated Life Securities Company was a one-man concern, organized by Rhodes Brothers for the purpose of taking over the stockholdings of the people who subscribed to the stock of the Central Life Securities Company—another holding company that went into the hands of an Illinois receiver in 1908, after it had promoted the Republic Life Insurance Company, which went into the hands of a receiver at the same time—that the Chicago office of the Selling Organization had at times as many as forty salesmen in the field, but that not more than five or six were at any time connected with the New York office; that the stock of the Consolidated Life Securities Company was sold, as a rule, at \$14 per \$10 share, though some was sold at from \$12 to \$12.50, and that the agents' commissions were from 17½ to 20 per cent, in addition to a 4 per cent commission paid the Selling Organization and the salaries of its officers.

It was also stated that the stock was sold at times on the instalment plan, the instalments being represented by notes, on which judgment could be taken without suit on default. Asked as to the amount of sales in New York, the information was not forthcoming because "the books were in Chicago." Asked as to the present operations of Scully & Co. and the Consolidated Life Securities Company in Chicago, answer was refused because of want of jurisdiction. Sufficient was elicited, however, to indicate that the operations of these companies in New York have absolutely ceased.

Unlike the Consolidated Life Securities Company of Chicago, the National Assurance Company of Wilmington, Del., seems to have left the State two or three months before the new law became effective. Its officers and directors are, however, largely citizens of New York. Hence, a preliminary investigation was made,

with the following result:

This corporation was organized under the laws of Delaware, in October, 1909, its organizer being Harry P. Townsley, formerly President of the Union Life Insurance Company (who, however, does not appear as an officer of the National Assurance Company), and its officers and directors, men formerly connected, in one capacity or another, with the Union Life Insurance Company. The latter company was taken over by the New York Insurance Department a year ago and is now being liquidated. Prior to its removal to Delaware, early in 1910, the National Assurance Company had an office at 64 Wall Street, New York, and from such office an active stock selling campaign seems to have been conducted. One of its stock salesmen who operated in New York asserted to representatives of the department that, as he understood it, the stock sold, while company stock was really the property of Mr. Townsley, \$10 shares being sold to the public at \$15, two or three dollars of which went to him (the stock salesmen) and one to Mr. Townsley, and from \$11 to \$12 into the treasurer of the company; that Mr. Townsley was the owner of such stock is, however, denied by the representatives of the company. It was also stated to the representatives of the department by the former Secretary of the company that he had never seen any books of account and did not think there were any.

It also appeared on the investigation that Mr. Townsley had organized in Delaware a subsidiary company known as the National Stock and Trust Company, of which he was President, and that such company had changed its name to the State Trust Company, and under that name is selling the stock of the National Assurance Company. Such Trust Company appears to have offered some of the National Assurance Company stock to a resident of the State of New York at \$20 a share as late as June 27, 1910, a letter from the Trust Company having come into the possession of the department, which letter recommends the stock as "a safe and conservative investment," and urges the recipient to subscribe while the price is low, asserting that the stock will advance to \$25 or \$30 a share, and adds that the trust company feels warranted in assuring its clients of "remunerative dividends and great advance in the market value."

It was also developed that while, as previously stated, most of the officers and directors of the National Assurance Company of Delaware were citizens of New York, among the directors are former United States Senator Richard E. Kenney, of Delaware, and Deputy Insurance Commissioner A. Donnell Marshall of that State, the latter seeming to be its legal representative in Delaware.

While, after a careful investigation, the department reached the conclusion that the National Assurance Company of Delaware, no longer having an office in New York, was not subject to examination under the New York law, yet, in view of the similarity of method between the incipient promotion of this company and the actual promotion of the Union Life Insurance Company some years ago by Mr. Townsley and his associates, which latter company did not succeed, it has been thought wise to give these facts to the public.

The National Assurance Company of Wilmington, Del., has an authorized capital of \$1,000,000, and, from the best information available, a considerable portion of its stock is as yet unsold.

The United Fire Promotion.

ALBANY, Oct. 8.—There has been filed in the New York Insurance Department a report of an official examination of the United Insurance Company of Arizona and its proposed subsidiary, the United Fire Insurance Company of New York. The latter company is as yet merely a name, it having been incorporated under the New York law in November, 1909. Its capital stock is to be \$200,000, but none of such capital has been paid in nor has it taken any steps looking to the beginning of business.

The United Insurance Company of Arizona is a promotion company, organized under the laws of that territory, in December, 1908. Its articles provide for a capital stock of 10,000,000 shares, of the par value of \$1 each, of which, as appears from the examination, 100,000 shares were subscribed prior to the organization by one O. L. Van Laningham and his associates, though, as appears, not a share has yet been issued pursuant to such subscription, and no call has ever been made upon the alleged subscribers to take up their allotments. In this connection the examiners note the interesting fact that, though this company hails from Arizona, the name of its birth State does not appear in its seal, stock certificates or literature; the words "New York—Chicago" being used instead, apparently to give the impression that its home office is in one of those financial centres. It is also noted that, though this company's charter requires that it have not less than eight directors, but seven were elected at the annual stockholders' meeting in January, 1910, and that only five of the seven are apparently qualified directors, the others not being stockholders.

Relative to O. L. Van Laningham, the report says: "He has achieved considerable notoriety as a promoter of other companies. Van Laningham first organized the State Agency Company, in connection with the Indiana Life Insurance Company, the agency company to act as general

Marquette Building, CHICAGO, ILL.

agent for the life insurance company for the State of Indiana. A large amount of money was collected by selling the stock of this agency company; then Van Laningham left it, went West and organized the Life Underwriters' Agency Company in Colorado. The plan in both these companies was to sell stock in the agency company with a policy of life insurance. Both of the agency companies were afterward placed in the hands of receivers, and little, if any, of the large amount of money collected by the sale of stock was in the possession of the corporations. Van Laningham then promoted the Great Western Life Insurance Company of Kansas City, Mo., which also later went into the hands of a receiver and had to be reorganized. Van Laningham then helped promote the Consolidated Casualty Company of West Virginia, with headquarters in Chicago. A large portion of the funds collected in the promotion of this company was dissipated and the company had to reduce its capital stock."

The report shows that many of Van Laningham's associates in organizing the United Insurance Company of Arizona had been associated with him before, several of them being Kansas City men. Their standing—which was somewhat investigated on this examination—was not found to warrant the following statement, taken from the company's original prospectus:

Staunchly backed by the most successful men known to the insurance world—men of sterling character, men whose co-operation and direct financial and personal interest assures success. Men whose record as leaders is proven—men of whom you know as being the most thorough and expert in the intricacies of insurance.

However, on November 1, 1909, Van Laningham (prior to that time the President of the company) severed his connection with it, and its management then devolved upon Ferris E. Shaw, Paul S. Knowles and Stewart Goodrell, each with a considerable experience in insurance matters. Van Laningham seems, however to have demanded a considerable contribution from the funds of the company as the price of such retirement, its books showing that he was paid upward of \$15,000 at that time, about half of it being in certificates of stock of the company. Since his retirement, however, his methods of promoting the company have been continued by the present management, though its literature has been toned down and its expenses somewhat reduced. Of the present management the report states:

It would appear that the present management really had in mind the ultimate formation of an insurance company, which would be managed by the present officers of the United, and that they—the present managers—are not merely promoters.

The plans and methods of this company are characteristic of many others promoted in this and other States. The shares of stock are in denomination of \$1, so as to be readily salable to people of small means. The plan seems to have been to dispose of the stock at the rate of five for one, much stress being placed on the claim that, when the authorized capital was fully subscribed, the company would have a surplus of \$40,000,000. Sales were accomplished through sales agents, at an average commission of 15 per cent, but really at a much larger outlay, owing to a system of advances to agents, which, in case of the agent not proving a success, was a total loss to the company. In placing its stock the original promoters and the present management have availed themselves of what they choose to call the unit plan, which involved the selling of the stock to a physician, a banker, a lawyer and an insurance agent in each considerable city or village in the United States, with the understanding that each would become the sole representative in such community of the respective insurance companies to be formed, a contract being made in each case permitting the stockholders thus interested to control the business therein. This plan has been tried before, and probably will be again. To make it of real value to these "unit" stockholders the promoting company must accumulate sufficient funds to organize a life insurance company, a fire insurance company, a marine insurance company and a casualty insurance company, all of which its literature promises that it would do. In that event, each of the professional gentlemen so interested might possibly secure a little "business" in addition to the promised dividends on their stock. What the organizers and present managers of the company thought of the value of the stock is indicated by the fact that the organizers did not take up their subscriptions, and by the further fact that the present management paid for their small holdings of stock in notes, which are still outstanding.

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the **CONNECTICUT MUTUAL**.

Men of Character and Ability are invited to apply.

**Conn. Mutual Life Ins. Co.,
Hartford, Conn.**

Please mention this paper.

Stock salesmen were supplied with literature characteristic of promotions of this class, as well as with facsimile copies of testimonial letters to an extent, as indicated in the report, on forms drawn at the home office. The means whereby these letters were obtained are indicated by one quoted in the report which acknowledges the receipt of a certificate for 500 shares of stock and states: "It was a pleasure to us to invest in a company of such magnitude," whereas the fact was that no stock was ever issued to the writers of the letter.

Even under the present management the literature assures the public:

The officers of the company, men of national reputation and active for twenty to thirty years, are thoroughly reliable and practical underwriters and financiers, and subject without fear to the strictest investigation for integrity, character, honesty and ability.

The following is quoted from the examiners' report:

The United Insurance Company has had at various times almost 200 stock salesmen in its employ. Some of these receive a salary of \$150 a month and a commission (generally 15 per cent on direct sales and an over-riding commission of 2½ per cent to 5 per cent on sales by men working under their direction). The non-salaried men work on a straight commission basis, usually 15 per cent. The commission was based on the selling price and not on the par value of the stock. * * * The commissions, salaries, travelling expenses and advances to salesmen amount to 140 per cent of the par value of stock sold to date. This is exclusive of all other expenses and disbursements. The total cost of selling the company's stock is 242 per cent, or an expenditure of \$2.42 for each \$1 share sold.

This company, still having an office in New York, viz., at 100 William Street, as well as one in the First National Bank Building at Chicago, it was possible to make an investigation of its finances as of July 1 last. Such an investigation showed the following, the figures, for convenience, being given in round numbers:

Total receipts from stock sales (including about \$68,000 in notes, still on hand)	\$245,000.00
Actual cash received.....	176,000.00
Cash disbursed for commissions, salaries and expenses	158,000.00
Present cash assets.....	18,000.00
	=====

Ratio of disbursements to total sales, 64 per cent.

Ratio of disbursements to cash sales, 90 per cent.

The disbursements to date include the following:

Salaries of salesmen.....	\$30,577.71
Advances to salesmen.....	38,641.60
Commissions to salesmen..	10,940.14
Travelling expenses of salesmen	10,762.22
Salaries of officers.....	13,750.00
Travelling expenses of officers	1,533.44
Printing and stationery....	14,154.67
Salaries of clerks.....	11,660.08
Rent	8,133.46
Furniture and fixtures....	5,190.89
	=====

and the balance—making up a total for promotion expenses aggregating \$157,912.21—for legal services, advertising, postage, and the like.

The above showing suggests grave doubt as to whether this company, even at a considerable reduction from its present rate of expenditure, will ultimately acquire sufficient funds to permit it to finance a life insurance company, a fire insurance company (the United Fire Insurance Company of New York), a marine insurance company and a casualty insurance company, and thus to avail itself of its professional units in each considerable city and village in the United States. In fact, the cash received, namely, \$176,000, representing 40,000 shares, paid for at \$1 each, and a paid-in surplus of \$130,000, some of the stock apparently having been placed at less than five to one, having been reduced by promotion expenses to but \$18,000, it appears that this company has thus far dissipated all of its surplus and nearly two-thirds of its cash capital. At the hearing its present managers admitted that, unless it could interest large capitalists its plan was a failure.

SHAW AND GOODRELL REPLY FOR UNITED FIRE

The following statement, in reply to Superintendent Hotchkiss, was made by Feris E. Shaw, Vice-President, and Stewart Goodrell, Secretary of the United Insurance Company:

"The attention of the officers of this company has been called to a circular letter addressed by the Superintendent of Insurance of the State of New York to 'Editors,' and containing what is presumably a resume of that officer's report, based upon an examination of the company's books.

"This examination was concluded more than a month ago, and a tentative report drawn up, a copy of which was sent this company. Upon a hearing the Superintendent ordered the report amended in several particulars, and stated that a copy of the amended report would be sent the company when completed. We have received no copy, and except as indicated by the circular letter, do not know what it now contains. In view of this fact, we feel that the interests involved require a reply in several particulars.

"In the first place, much of the report is devoted to O. L. Van Laningham, formerly connected with the United, and his history as a promoter is dwelt upon at length. Van Laningham severed his connection with the company nearly a year ago, and this fact was shown to the Superintendent of Insurance. The \$15,000 compromise with Van Laningham adversely commented upon was for money actually advanced the company by him, and was legally and in good faith due him. This transaction was fully explained to the insurance examiner, who did not question its bona fides.

"The stock salesmen feature is another subject of attack. The plan of organization adopted by the United was to sell its stock to those who were to be its local representatives, thus building up at one and the same time a large agency force, prepared to immediately furnish the company

"We are convinced that the amount of the necessary capital will be interested and this company be made a valuable factor in the insurance world. Failure will not be due to lack of honesty and diligence on our part."

The Liverpool and London and Globe has bought a control of the Canadian Railway Accident Insurance Company of Ottawa. It has agreed to take all the shares of the Canadian Railway Accident at 100 per share, the par value being 25. The Canadian Railway Accident began business in 1895, with an authorized capital of \$500,000, of which \$250,000 was subscribed and \$62,500 paid in in cash. The company made a specialty of writing accident insurance for railway employees, and last year had a premium income of \$333,336, with losses of \$149,462. It is announced that the company is to be continued as a distinct organization, and that John Emo, who has been manager for several years, will be retained in that capacity.

Here and There

ON Wednesday and Thursday of next week the Liability Insurance Association will hold its annual meeting for 1910 at the Hotel Plaza. The question of liability reserves is one which is receiving a great deal of consideration at the present time on the part of all the casualty companies, as well as the insurance departments. The association has deemed it advisable to devote considerable time to the discussion of this subject, and has arranged with representatives of two insurance departments to read papers on the same, in addition to which one or two well known actuaries who have made a special study of the casualty business are also expected to read papers and participate in the discussion. The speakers will include:

William H. Hotchkiss, Superintendent of Insurance of New York State.

James R. Young, Insurance Commissioner of North Carolina. Subject, "From the Viewpoint of Supervision."

Silas R. Barton, Auditor of Public Accounts of Nebraska.

A. W. Damon, President the National Board of Fire Underwriters. Subject, "Responsibility of the Individual."

Robert Lynn Cox, general counsel and manager of the Association of Life Insurance Presidents. Subject, "Modern Co-Operative Methods to Meet Tendencies of Governmental Control."

Anton A. Raven, President of the Atlantic Mutual Insurance Company.

George F. Seward, President of the Fidelity and Casualty Company. Subject, "Insurance Is Commerce."

* * *

The Aetna Life Insurance Company has issued a well gotten up pamphlet by J. Scofield Rowe on the effect upon liability insurance of the new liability and workmen's compensation laws in New York State. The

pamphlet comprises a discretion of the bearing of this legislation upon both employers of labor and insurance companies, to which are appended the texts of the laws in question.

* * *

Charles J. Holman, assistant manager of the Commercial Union, has been chosen Treasurer of the National Board of Fire Underwriters to fill the vacancy caused by the death of Marshall S. Driggs.

* * *

It is reported that between \$700,000 and \$800,000 has been placed recently on the buildings and contents of John D. Rockefeller's extensive property at Tarrytown, N. Y.

CONTINENTAL LIFE MAKES A RECORD.

The third anniversary of the Continental Life Insurance Company, of Wilmington, Del., is accompanied by a showing as to the character and quality of its business in its home State and in Maryland, which is really extraordinary. As the company itself truthfully says in its own literature, the amount of business transacted by a life insurance company in its home field, where its management is best known, is a fair indication of the measure of confidence which it merits.

In the State of Delaware the new insurance in written and paid-for in 1909 for the legal reserve life insurance companies, exclusive of industrial companies, aggregated \$2,661,331. The Continental Life was first in the volume written, its total being \$761,107, or 29 per cent of the entire new business.

In Maryland, among the legal reserve life insurance companies, exclusive of industrial companies, the Continental Life stood fourth for 1909, notwithstanding that its Maryland business for that year was confined chiefly to the nine counties commonly known as the Eastern Shore. Baltimore and Western Maryland are now being developed. During the month of September, 1910, it received all told applications for \$1,303,500 of new insurance.

It should be further said that this new company is transacting its business strictly within the margins of the so-called modified preliminary term method of valuation.

OBITUARY.

Henry C. Tanner.

Henry C. Tanner, manager of the insurance brokerage firm of Tate & Robb, at 100 William Street, died at the home of his brother and only relative, William B. Tanner, of East Orange, N. J. Henry C. Tanner was born in New York City forty-three years ago, and was educated in the Thirteenth Street School. As a boy and young man he went to sea before the mast, visiting many parts of the world. He was familiarly known as "Doc" Tanner, and many of his intimates supposed him formerly to be connected with the medical profession. He never was, however. He was well known as an attendant at the first nights at the theatres. His acquaintance in and out of the insurance business was very extensive.

James S. Barrett.

LOUISVILLE, Ky., Oct. 10.—James S. Barrett, President of the German Security Bank and German Security Insurance Company, died last night at the age of seventy-six years.

Along the Shores of Lake Michigan

CHICAGO, Oct. 12.—Last week will linger long in the memory of Western fire underwriters. For many years the Northwest meeting has been the crowning event of the year, a time for gathering in Chicago from all parts of the West, a time for dropping work for a few days, for renewing friendships and acquaintances and for acquiring some new ideas from the storehouses of the experts. Around the Northwest meeting have grown up a number of lesser affairs, such as company dinners and reunions of members of past organizations or of men from certain fields. This year there were added to the list of such organizations the Association of Life Members of the Fire Underwriters' Association of the Northwest and Insurance Survey Bureau Club, composed of former inspectors and other employees of that defunct organization. The youngest members of the former have been paying dues to the Northwest Association at least twenty-five years; those of the latter are mostly young men who a few years ago composed probably as fine a corps of inspectors as the country could boast of and many of whom now are prominent field men.

But the growth of the Ancient and Honorable Order of the Blue Goose has brought a new element into the Northwest meeting crowd, not large in numbers yet, but influential and a valuable addition. Reference is made to members of the Blue Goose who come from the Far West, the South and the East. With the continued growth of the Blue Goose, Chicago will become the Mecca of fire underwriters from all parts of the country during the first week in October of each year.

The festivities commenced this year with the meeting of the Grand Nest of the Blue Goose on Tuesday. Delegates were on hand from twenty-one State ponds. The ritual of the order was revised along the lines of more elaborateness and dignity. During the coming year a committee will revise the constitution and by-laws for approval of the Grand Nest at its next meeting.

On Tuesday evening 124 men sat down to a banquet in the Red Room of the La Salle. The toastmaster was A. R. Monroe, assistant manager of the Queen, who on Thursday became the President of the Northwest Association. Among the speakers was Insurance Commissioner Barry, of Michigan, and among the guests were a number of United States managers and Western managers. The appointments were perfect, and it was an evening of wit and song not soon to be forgotten.

The Blue Goose doings came to an end on Wednesday evening with a great meeting attended by some 500

members, at which the newly elected officers were installed and three goslings were initiated by as many teams from different States. Upward of twenty-five goslings were admitted to membership, including one company President and several managers and assistant managers.

The Northwest meeting opened on Wednesday morning with a large attendance. The annual address was looked forward to with unusual interest because it was to be delivered by Commissioner Barry, of Michigan, whose position as chairman of the committee of commissioners which investigated the expense question gave his views almost the weight of official pronouncements. Mr. Barry came out squarely for flat and contingent commissions as a cure for many of the most crying present evils in the business at the present time.

While two addresses were on inspections and one on practice, nearly every speaker, including Mr. Barry, touched upon the subject of fire prevention, while two addresses on Thursday morning were devoted entirely to this subject. The programme was arranged with special reference to the interest and needs of field men, and the fact that speakers on different topics brought in fire prevention showed clearly how prominent that subject is in the minds of fire underwriters at present. It is the vital question now. With the public clamor for lower rates underwriters know the only way to meet this demand to any great extent is through reduction in losses. How to make the people see that is their problem.

* * *

Talk of fire companies "up against it" continues in the West. Unless reports are much exaggerated, some of the Western Insurance Commissioners will have some perplexing problems to deal with when company statements come in, for the showing of at least a few companies is likely to be so weak as to require supervising officials to take notice. Some companies admit that they have made little or no underwriting profit so far this year. The big companies are fighting harder than ever to keep up their premium incomes in the face of rates going down for improvements, and for co-insurance and with stocks not yet up to their volume of three years ago. Facing harder competition, with underwriting profits small or negligible, the company without large assets earning interest cannot expect to make a showing gratifying to its stockholders, and if its surplus was low at the beginning of the year the chances of improvement at the end are not good.

In his address before the Northwest Association last week Commissioner Barry, of Michigan, expressed strong

V—No information. Q—Quarterly.

disapproval of the Western Union's separation rule. He sees no reason why preferred business is worth 25 per cent in a clear union agency and only 15 per cent in a mixed agency. Should this view become prevalent and find expression in legislation, as it did some years ago in Iowa, representatives of some of the smaller companies think it will work great hardship on them. Comparatively small non-union companies now hold prominent places in non-union agencies which they would lose if large union companies entered the agencies at the same scale of commission.

If some of the States see fit to legislate on commissions this winter the effect is likely to be uniformity, whether the commissions be flat, graded or contingent. In any event weak companies, if deprived of the privilege of competing with strong ones along commission lines, are likely to find themselves in an unpleasant predicament, except where they are operating near home and have the advantage of local interest and prestige.

* * *

Surplus line business has been re-

ported very slack in the West this year. One Chicago surplus line broker gives the co-insurance clause credit for considerable of what little surplus business there is. The new practice of giving greater credits for co-insurance appears likely to produce some surplus line business in manufacturing centres where there are very large plants.

* * *

A year or so ago more or less was heard in the West of the Western Fire of Arizona, with headquarters at Ogden, Utah, which was entering surplus line offices at various points. O. O. Oldham was the manager. He resigned, and then little was heard of the company, but recently it was reported that Oldham was opening a general agency in the State of Washington. Last week a Chicago surplus line broker swore out a warrant for his arrest on the charge of running a confidence game. He alleges that Oldham while in Chicago on his way East a few weeks ago got the broker to cash a draft for \$50 drawn on his alleged financial backer in this new general agency enterprise, so that Oldham could proceed directly to New York and not be obliged to go to Cincinnati to get money. The broker alleged that Oldham went to Cincinnati, entered a partnership there, and since has given him one worthless check in payment of the draft and ignored one draft for \$50.

* * *

Announcement of the appointment of Walter D. Williams as Western manager of the Security of New Haven came as a surprise last week. Since the death of Jesse A. Daggett some months ago E. K. Crawford has been the acting manager. His friends had hoped that he would be appointed manager. The work has been heavy and was telling on his strength, however, so he probably will be better off in the long run to be assistant

manager. He is still young, and with the fine reputation he already has attained has excellent prospects for future preferment. Mr. Williams is regarded as admirably fitted for the managership, having had long field experience in Minnesota and the Dakotas and executive experience as Vice-President of the Spring Garden.

Local agents in Missouri who at the St. Joseph convention in June decided to work for some kind of legislation to alleviate conditions in the State do not appear yet to have outlined their programme. Conditions are reported as growing constantly worse. There has been much complaint about St. Louis for months past, and Kansas City is said to be steadily getting more like St. Joseph, where chaos has reigned for years.

LA SALLE.

A NEW PROMOTION.

New fire insurance companies continue to be promoted. The last one to be noted is that of the Greater New York Insurance Company, and it is stated that John W. Brooks, formerly with the People's National, is the organizer. The proposed strength of this company is \$200,000 capital with a surplus of equal amount.

Bob's Remarks

ONE of the largest Spanish fire insurance companies — the Union and Phenix Espanol, of Madrid, Spain—has been licensed to do a fire insurance business in this State. The regular cash deposit of \$500,000 has been made with the New York Department. Under the United States management of the corporation of Fester, Douglas & Folsom, of 1 Liberty Street, the company will do only a reinsurance business, contracts with some four or five companies having been made. R. H. Folsom, of the underwriting corporation, will be the managing director.

* * *

According to the last published statement at the Paris (France) headquarters of the Union & Phenix Espanol, the company has a paid up cash capital of over \$2,000,000, with total cash assets of \$20,000,000. Representatives of the New York underwriting corporation are Mund & Fester, Hamburg and Antwerp; Douglas Brothers, Canada; Fester, Fothergill & Hartung, London and Liverpool, and Mund, Fester, Heiseler & Wiese, of St. Petersburg, Russia. It is expected that several other foreign companies will regularly enter New York State shortly as admitted reinsurance offices, and be represented by the corporation of Fester, Douglas & Folsom for the United States.

* * *

Application for the admission of the Sovereign Fire Insurance of Toronto has been made to the New York Insurance Department. When examined by the Illinois authorities the company was given a better showing than it claimed. A Western manager will probably be appointed when the New York matter is definitely settled.

* * *

As stated in THE CHRONICLE a short time ago, the subject of universal classification is gaining recognition and strength with insurance departments. Professor A. W. Whitney, insurance adviser for the New York Legislative Committee, and who is a close student of underwriting matters, states that, in his opinion, combined experience is necessary for combined rate-making. Evidently this is the opinion of the Illinois Insurance Department.

* * *

The proposition to write three-year policies on mercantile buildings at twice the annual rate has not been approved by the Pacific Coast Board. This action for reduced rate was suggested to meet competition of non-board companies.

* * *

Talbot, Wallace & Co., agents for the marine department of the Aetna Insurance Company, have issued the

following circular: "The Aetna Insurance Company, of Hartford, Conn., begs to call the attention of brokers to the facilities it offers for the underwriting of all classes of marine hazard. Ocean, as well as inland, risks are accepted, and no line is too small to receive the company's best consideration. Brokers are assured that they will receive every attention and that their business will be fully protected.

* * *

Beginning with next year, it is expected that the Vulcan Fire Insurance Company, incorporated at Oakland, Cal., will be ready for business. The proposed capital and surplus will be \$1,000,000. I. H. Clay, President of the California State Association of Local Fire Insurance Agents, has been chosen President of the new company.

* * *

Judgments arising from claims on account of the San Francisco conflagration of 1906, against the Williamsburgh City and Norwich Union have been settled, and in favor of the policyholders. The basis of defence was the earthquake clause, and this was not allowed by the court.

* * *

Local underwriters, and particularly countermen are generally pretty wise as to street jokes and "jollies"—none, in fact, are quicker to note such things. For years application clerks have noted the discrepancy in street numbers on Broadway between Twenty-third and Twenty-fourth Streets. According to the maps, there are none between 957 and 1,097, Fifth Avenue butting in and thus disturbing the continuity of lot numbers. Yet only recently a broker (somewhat of a wag) invaded a local office and asked for a rate on building and contents of 977 and 979 Broadway. He was immediately but firmly fired.

* * *

The Manhattan Life Insurance Company announces with great regret that Dr. William B. Lane, after many years of active service, has, upon the advice of his physicians, tendered his resignation as Vice-President of the company. He will continue, however, in an advisory capacity. The following appointments have been made by the Board of Directors: Morris W. Torrey, who for the last five years has been Secretary, and before that Actuary, has been appointed as Vice-President. Melvin DeMott, for the last six years cashier, has been appointed Secretary.

* * *

It is announced that the American Union Fire Insurance Company, of Philadelphia, is making rapid progress in the completion of its organization and expects to commence business some time this month. BOB.

NOTEWORTHY ADVANCE.

The

BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest
of the policyholder by the adoption of
the following liberal features in its new
policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy
year.

Thirty-one days of grace in payment
of all premiums after the first year.

Paid-up insurance or cash surrender
value or extended insurance after two
years' premiums have been paid.

Loans for the full cash-surrender
value.

Policy payable in one sum or in instal-
ments for terms of years.

Policy has no restrictions upon resi-
dence or travel and is incontestable after
the first policy year, except for non-pay-
ment of premiums.

Right of the insured to change the
beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make
this new policy the very perfection in a
life insurance contract.

Casualty and Surety Men at the Plaza

AT THE Hotel Plaza on Tuesday the Board of Casualty and Surety Underwriters held its seventh annual meeting. Franklin J. Moore, President of the Board and United States Manager of the General Accident, Fire and Life Assurance Corporation, delivered the annual President's address, in the course of which he discussed the general problem of official supervision and of the insurance business.

"A subject of vital interest to us," Mr. Moore said, "one that has had most exhaustive consideration at our hands, that is one of the subjects we are organized to promote, and, therefore, has our general support, is Federal supervision. Without attempting here to go into any question of its possible merits or demerits, I think I am safe in saying that Federal supervision, as a fact, seems to be a long way off. If we consider, therefore, that any change in the near future is improbable, may it not be well to give consideration to supervision as we now have it without, in any degree, lessening our efforts in the direction of securing something we deem better?"

James R. Young, Insurance Commissioner of North Carolina, read an address entitled "From the Viewpoint of Supervision," in the course of which he said:

"What is there to call for a reference to how things may look from the viewpoint of supervision? Many look upon the supervision of insurance as an evil, though a necessary one. It is not always stated whether it is thought necessary, because of the benefits that flow from it (though a little irksome) at times or because it is laid upon the business and cannot be remedied. In my opinion in which I do not expect all of you to concur even remotely, proper supervision is not merely a benefit, but a necessity. It should be judged fairly and not by its abuses, which happily are rapidly passing away. Supervision is not responsible for all the ills of the business, nor even for all laws

upon our statute books or taxes imposed upon the business. I trust your feelings toward supervision may not always be illustrated by a story I read not long since. A nurse had been called as a witness to prove the correctness of the bill of a physician.

"Let us get at the facts in the case," said the lawyer, who was doing a cross-examination stunt. 'Didn't the doctor call several times after the patient was out of danger?' 'No, sir,' answered the nurse. 'I considered the patient in danger as long as the doctor continued his visits.'

"It is not so necessary for the best companies nor their officers as for others not so genteel in their methods. Were all companies and their representatives perfect there would be no need of supervision, just as with such a condition generally there could be no need for government and laws, courts and officers and such line.

"In my experience as a supervising officer it has been my privilege and duty to put into effect many laws, some of them largely of an educational character, and I have yet to find a law, however obnoxious, that was not generally admitted to be a good thing for the 'other fellow.'

"That supervision of insurance companies is here to stay no one doubts. Whether it is best and necessary many may doubt; but I am sure as to its necessity from the viewpoint of the government and the people, and that it is best, all things considered, for the companies, but I believe and am free to admit that it is not perfect in its work and methods, and I, with other Commissioners, desire to unite with you in its improvement. While, as I have said, it is not perfect in its working, it yet has about as little friction in its makeup as other laws upon our statute books. The people are supreme, and, while no injustice should be done, even in the name of law to even a corporation, the people are entitled to have not only fair and just laws for their protection, but laws so expressed that they may know and feel that their

rights are fully protected. This is especially true of and calls for a proper supervision of all quasi-public corporations. The only question is to get just laws and a fair and competent supervision. The Commissioners are not responsible for all laws, and in many cases are called upon as executives to enforce laws that do not commend themselves to their judgment as wise or fair, though it is true that the Commissioners are largely responsible for the laws upon the statute books of their States. Hence, it is their duty to study the principles of insurance laws best suited to their State conditions, and then, having advocated the embodiment of these principles into laws in the best form as well, to enforce them after they are enacted. All insurance laws should be written from the standpoint of supervision, but in absolute justice and fairness to the company, as well as to the citizen of the State.

"The difficulty is greater, I believe, gentlemen, with your business than with any other class of insurance. Life insurance, after many mistakes and failures, has been practically reduced to a scientific basis and can be mathematically calculated so that there should be no need for great uncertainty or mistakes in its management or regulation. Fire insurance, after many years, can point to certain well established principles evolved from long experience and close observation. The path is almost a beaten one, with its outlines well defined. Not so with your business. It is comparatively a young business, that has been rapidly evolved under the masterly hand of you who have given to it the best years of your lives and the working of your trained minds. Even from the viewpoint of supervision I have watched with wonder and amazement the remarkable work shown by many of you before me in meeting and solving the various problems as they have arisen in your class of business. To-day I congratulate you and felici-

EMPLOYERS' LIABILITY INSURANCE ABROAD

By Miles M. Dawson

X. WORKMEN'S COMPENSATION IN GREAT BRITAIN

(Copyright, 1910, by Miles M. Dawson.)

LASGOW, Sept. 17, 1910—The first British workmen's compensation act, providing for indemnity for workmen and their dependents for the consequences of all accidents incurred "during and in the course of their employment," was passed in 1897. It was a "government" or administration measure of the Conservative party, which was then in power, and was actively championed by Lord Salisbury, the then Premier. Just before that administration came in, the House of Lords, always Conservative in politics, had rejected the Asquith bill, urged by Mr. Herbert Asquith, now Premier, on behalf of the then Liberal Ministry, of which Mr. Gladstone was then the head.

The workmen's compensation act went much further than the Asquith bill, but was based upon an entirely different principle—viz., The compensation act provides for indemnity for the consequences of all industrial accidents without regard to negligence. The Asquith bill proposed merely to remove the defences of the "fellow-servant" and "assumption of the risk" rules, thereby, as it was often put, enabling employes to recover on precisely the same basis as a mere stranger; that is, in terms of American liability insurance, the Asquith bill was aimed at making employers' liability exactly equivalent to public liability.

It should be explained that in Great Britain workmen's compensation also was imposed upon and over the remedies already supplied by British law, which were upon the common law liability or under either of two statutes, one of which, the act of 1880, rendered the employer liable in very many cases in which under the common law he was not liable. This employers' liability act of 1880, indeed, was regarded the most liberal law, based upon the negligence principle, that had been enacted in any country up to that time. The liability for negligence continues, but is rarely enforced.

Though the compensation act was based upon the principle that the industry should bear the risk, in order that the consumers may pay all the costs in the price of the product, it proceeded on the basis of the employer being held individually liable. Of course, the employer was permitted to insure—that went without saying. But there was no requirement that he do so; and in the act the sole reference to insurance was that if an employer set up and maintained a solvent "establishment fund" or contributory mutual association of his employes, which paid benefits found by the government to be not less than under the act, and toward which the employer contributed enough to furnish benefits not less than under the act, he might be freed from liability under the act.

It was expected that under this provision there would be a large increase in the utilization of these establishment funds; and the expectation was reasonable, certainly, in view of the fine showing which Great Britain had already made in this regard. Such mutual associations of employes were usually conducted at very low expense. They also furnished other valuable benefits, such as insurance against sicknesses and against death, due to causes

other than industrial accident; and, indeed, most frequently likewise provided an old age or retirement pension.

Yet that hope has been disappointed. After more than a decade it is seen that no considerable advance has been made in the utilization of these funds or societies. This is accounted for in many ways. The most potent influence, however, has undoubtedly been the opposition of trade unions, due in part to the fact that sometimes such funds duplicated the benefits which they offered, and thus compelled employes to purchase and pay for insurance a second time, but yet more to the unquestionable fact that employers have more than once attempted to make use of these funds as a means of keeping employes out of the unions or even as a means of fighting the unions. The requirement that the employer maintain the funds fully solvent has also been something of a damper, as also the requirement that his contribution be fully equal to what it is reckoned he would be liable for under the law. At best this saved him only the excess of expenses of operation and the profits, if any, of private companies, while it imposed a good deal of care and responsibility, and, if any contribution was made toward other benefits, considerable additional cost.

Yet some of the establishment funds, and, indeed, most of them, have been exceedingly satisfactory, both to employers and employes, and if their satisfaction were as much a matter of news and of general interest as the occasional dissatisfaction, doubtless there would have been a wide extension of this system.

It was also expected that mutual insurance would make great headway—i. e., the organization of mutual associations of employers. Of this there has been very little, however. That is ascribed very largely to the strong individualism of British employers, who do not like such co-operation with other men, firms or companies, engaged in the same general line of business. Free competition is a British trade principle, and there is little disposition, therefore, for the industries to federate for this or that ulterior purpose. Another obstacle, also, is the British love of solvency. The strong tendency of voluntary mutual associations of employers is to collect as little currently as possible, thus inviting insolvency. The British employers favor in principle and in practice sound, solvent insurance companies and abhor the contrary.

These influences all strongly tended to throw the insurance under the new act into the hands of British stock insurance companies. Several other things co-operated to that end. The companies were—or, at least, several of them were—large, strong, well-managed, trusted and reliable. They were also well-represented by an able, well-trained, effective field force. They already occupied the field. Nearly every considerable industry was perhaps already on their books under the old law, for employers' liability insurance was more extensively patronized in Great Britain than in any other country.

At the outset also their rates were so low—though, of course, greatly advanced over the rates under the old laws—that they lost a good deal of money. The fact that the new liability left the old liability untouched, unless

benefits under the new act, were accepted, also seemed to justify to a considerable degree the increased rates, though experience has since shown that very few proceed under the old laws. The fact that the earliest financial statements of all the companies showed losses doubtlessly acted as a deterrent of the organization of mutual companies by the employers.

A great and potent factor also was the prudence of the management of the leading companies. While maneuvering carefully to cull out undesirable risks and to improve others, and while more or less steadily pressing for better rates, they did not needlessly alarm and excite by big, horizontal increases. Moreover, a strong minority in assets and popularity and a majority in mere numbers of companies remained out of the tariff associations, so that there has been little complaint about "combines." The action also of the tariff companies in reducing commissions—a move which was generally followed by non-tariff companies—did much to keep out mutual competition by reducing the pressure of increasing rates.

The increase of rates from the schedule first adopted when the compensation act went into force has also been in part justified in the minds of employers by the two amendments to the act, since made—the last in 1907, extending it to cover several industrial diseases—both of which considerably enlarged the liability. To the companies, rather than to the insured, the more stringent reserve requirements, virtually though not directly enforced by law, also justify the increase of costs while making for solvency.

Whatever the cause, the fact remains that in Great Britain the regular stock insurance companies have retained the business under the compensation act against all competitors. This testifies that they must have carried on the business in a manner satisfactory to their customers, the employers. It has not been equally satisfactory to their shareholders. Thus after several years of loss to nearly all the companies the last annual statements of the tariff companies shows a loss for no less than ten of their number and an average profit for all, not allowing for increase in premium reserves, of only 2.02 per cent of the premiums, while the non-tariff companies yet show a loss of no less than 8.61 per cent of the premiums. The total business showed a loss, not allowing for increase of premium reserves, of thirty-one one-hundredths of one per cent of the year's premiums. Of the 10.63 per cent of excess costs in the non-tariff companies 6.78 per cent was due to heavier ratios of claims to premiums, 2.19 per cent to heavier commissions and 1.66 per cent to heavier administration expenses.

Notwithstanding their many efforts to enforce economy, commissions and expenses are not low in Great Britain. In the year referred to they averaged:

Companies.	Commissions.	Management Expenses.	Total Expenses.
Tariff	13.17	22.93	36.10
Non-tariff	15.36	23.29	38.65

This is more than a half higher than in France under a system of free insurance; nearly twice as high as in Sweden, where there is state insurance in competition, and almost four times as high as in Germany, where insurance is compulsory and in mutual associations of employers, or in Norway, where insurance is compulsory and with the state.

The British tariff companies are doing the best they can under many disadvantages, with the help of some of the better non-tariff companies. But the conditions, and especially the want of united action, hampers them and endangers the situation. The American managers are

much to be congratulated upon their resolute reduction of commissions and like expenses under the New York law, which went into effect this month. Their action, if adhered to, may also markedly influence matters of a like nature in Great Britain and save the day.

These rates of commission are not deemed high in Great Britain, however. The "Post Magazine," of London, says of them:

"There is little cause for complaint in a commission of less than 14 per cent, and, so long as the public persist in regarding the insurance agent something between a missionary and a tax collector and at least as an indispensable factor in obtaining for them a necessary protection, they cannot object to a charge for services which benefit them as much as they do the offices."

It must be borne in mind, likewise, that in Great Britain there is still a good deal of litigation, both about whether an accident comes under the act and also about liability under other laws, as well as about the degree of impairment, which last is to be found in all countries. There are also very considerable inspection expenses. The managers are most anxious to reduce expenses and are doing so, but their efforts meet with stubborn resistance—nowhere more stubborn, of course, than on the part of the very necessary, indispensable agents.

To offset the pressure of these heavy expenses, the companies, by two methods of attack, keep down the claims. One method is to "pare" them—that is, to endeavor to fix the percentage of permanent disability or the number of days allowed in temporary disability, as low as possible—as low, say, as will be borne without the employe insisting upon having the court pass upon it, which is done cheaply, expeditiously and, to use the language of the act, "summarily." That fact, of course, limits the utilization of this method, which also has its good side, since it makes against simulation and malingering, evils which are only too common.

The other method consists in reducing the risk by offering lower rates for improvements in prevention or for careful selection of employes. The former is wholly beneficial, but is hard to accomplish, as such improvements cost money and suggestions of them on the part of companies are often resented as criticisms of the employer's care and as impertinent interferences with his affairs. The weeding out of defective employes who, by reason of previous accident or illness or even of old age (when not also old employes) or of defective hearing, vision or limbs, is quite another matter, however; it costs nothing—indeed, makes for efficiency—and if it brings cheaper rates is sometimes an acceptable proposal. It is bitterly resented by employes and their trade unions, to be sure, who assert

52-54 WILLIAM STREET NEW YORK

that it also extends, in some cases, to discriminating against married employes, because the liability under the act in event of the accidental death of a single man is limited to the burial expenses unless he leaves a dependent parent or grandparent.

Indeed, insurance in the stock companies has, for one reason or another, incurred quite as great, though by no means so effectual opposition on the part of trade unions, as did the establishment funds. At every meeting of the Trade Union Congress for several years past a resolution has been voted in favor of state insurance and at the session of this Congress this very week this resolution was again presented and adopted, accompanied by protests against the "paring" of claims on the certificates of the physicians of the companies. In addition to the resolution favoring compulsory insurance with the state, the following resolutions calling for amendments were adopted:

First—To make the minimum compensation for adults 10s. per week in the case of non-fatal accidents.

Second—To give the workmen compensation as damages for the loss of an eye or other permanent injury to the body or limbs.

Third—To secure the appointment of medical referees who are specialists in the industrial diseases within the scope of the act.

Fourth—To secure that no medical practitioner appointed as a certified surgeon or medical referee shall be eligible to act on behalf of an insurance company in any capacity where fees are paid for decisions on reports, and that in no case shall a medical man hold the dual office of medical referee and certifying surgeon, and that all fees payable by workmen to certifying surgeons under the Workmen's Compensation Act be paid by the state."

The resolutions of the Trade Union Congresses, asking

for state insurance, have so far met with no response. This is doubtless in part due to the failure of the congresses to give attention to the defects of the British system, which lie closest to their members. These defects are that there is a duplication of indemnities—workmen often collecting both under the act and for sickness benefits from their union or friendly society—and sometimes from all three. This evil, leading to over-indemnity and so to simulation and malingering, is well known to labor leaders and much deplored; yet there is no express consent to do away with it, as by utilizing such agencies for covering the earlier weeks, as in several countries. Possibly the introduction of compulsory, contributory invalidity and unemployment insurance, both of which are favored by the Congress, may cause this step to be taken. Until some such offer is made, thus presenting a distinctly better, more businesslike and comprehensive plan, employers and the people in general are likely to rest satisfied with an act like the present, and with private, voluntary insurance in stock companies.

That the law and the insurance have in general been satisfactory—much more so than under our very imperfect laws, for instance—is abundantly shown by the circumstance that among people as various in notions and practices as the English, Scotch and Irish they have been about equally acceptable. The degree of satisfaction is also seen in the fact that, without arousing effectual protests, the benefits of the law have been extended to agricultural workmen, domestics, and, in fact, virtually to every class of wage-earners.

MILES M. DAWSON.

Singer Tower Lessons

MANHATTAN'S skyline fire protection problem has long had the attention of fire underwriters. The recent fire on one of the floors of the Singer tower seemed to show that the kernel of the problem for New York is not so much a matter of fire fighting equipment as good building construction.

There has been a great advance in fireproofing methods even in the last eight or ten years. A building with a steel frame and brick walls used to be called "fireproof," and many people took the label as accurate. But people have been educated by the

Baltimore and San Francisco fires to know what really safe construction means. Everything about a building—surface flooring, window frames, doors, trim—must be unburnable. Here applies the saying, "A chain is as strong as its weakest link."

Ernest Flagg, architect of the Singer tower, has long been one of the most outspoken critics of the kind of structures which masquerade as "fireproof." When he set out to design the Singer tower, then the highest building and now the second highest in the world, he decided to eliminate wood altogether.

This is not the only structure in which this practice has been followed. It just happens to be the most conspicuous, and the fire last week, on the twenty-sixth floor, drew attention to the success of the no-wood policy. The tower has a steel frame protected by hollow tile fireproofing, with fireproof floors, partitions and "trim."

Apropos of the fire, Mr. Flagg says:

"The way in which this fire in the Singer tower was controlled goes to show that New York's high buildings can be made really fireproof. The incident serves to illustrate the difference between real fireproof construction and what is often called fireproof construction.

"Of course, I do not yet know the exact particulars of this fire, but if

one may judge from the reports, it was a considerable blaze. It is likely that in many buildings it would have spread and become a great fire.

"That the blaze was extinguished before much damage was done was because it had nothing to feed upon.

"The trouble with many buildings that are called fireproof is that there are tons of wood in them. When floors, trim and window frames are wood the owner may say his building is semi-fireproof, but he cannot truthfully call it fireproof."

HERE AND THERE.

In addition to calling upon the New York Fire Insurance Exchange for data as to methods of rate-making, constitution and by-laws and other items of information, the Legislative Investigating Committee has requested the same information from the Suburban Fire Insurance Exchange, New York Board of Fire Underwriters, National Board of Fire Underwriters and other similar organizations. It is generally thought that the "graft" investigation will take up the time of the committee for several weeks, and after that insurance matters will come up, but not until early in November.

* * *

The fourth annual meeting of the Liability Insurance Association held its preliminary sessions at the Hotel Plaza yesterday and will listen to a series of addresses to-day, which will be reported in the next issue of THE CHRONICLE.

On January 1, 1909, rates were reduced and values increased to full 3% reserve.

Manhattan Funding Affairs

IN the fifth instalment of the results of the inquiry into promotions by Superintendent Hotchkiss of the State Insurance Department, the Life and Casualty Company of New York and the Manhattan Funding Company, both incorporated in this State last March, were considered. The Manhattan Funding Company appears to have been launched, according to the Insurance Department's report, for the purpose of financing the Life and Casualty Company. Neither company has yet sold any stock, so the officers told the examiners.

Some of the promoters and directors of the new concerns were connected with the Columbia Life Assurance Society, which was financed by the Metropolitan Underwriting Company. Superintendent of Insurance Kelsey refused to issue a license to the Columbia company because it appeared from the examination made by his department that the company's capital was chiefly invested in a \$100,000 mortgage on property located on Ward's Island, part of which was under water at high tide.

M. L. Mortimer, an insurance man of 92 William Street, President of the Metropolitan Underwriting Company, the Columbia's backer, is a director in the new Life and Casualty Company. George H. Earl, Secretary of the Northern Pacific Railway Company, who was Vice-President of the Columbia company, is another director of the new insurance concern; Edward Barr, an officer of one of the older concerns, is another director of the new, and so is G. W. Marlor, who appears to have been connected with either the Columbia or the Metropolitan in some way.

One of the features of the new concerns, according to the department's report, is that "the promoters of the Manhattan Funding Company appear to have vested in themselves, without any money payment therefor, a majority of the total capital stock of

\$300,000, with the intention, as stated by the examiners, 'to finance the insurance company with the proceeds obtained from the sale of the minority stock of the Manhattan Funding Company.'" The examiners make this comment on the plan: "This plan will enable the officers and directors, who paid nothing for their stock, to control both companies."

According to the report, Walkup, Baldwin & Co., of 27 William Street, seem to be the active promoters of the funding company, whose stock was all issued to Mortimer in exchange for his original plans of an old line stock life insurance company. This was done to give a nominal value to the stock, the examiners infer. The stock was then immediately returned to the treasury and a majority of it was distributed among the officers and directors for services rendered.

The literature of the insurance company is most enthusiastic. From a probable financial statement as of January 1, 1915, it appears that the funding company, the general manager and agent of the insurance company will have a surplus to stockholders at that time of \$1,888,500 and an established book value of the stock of \$705 per share. A second leaflet shows that if the Manhattan Funding Company succeeds in accumulating \$250,000 to buy stock in the Life and Casualty Company of New York the latter, at the end of five years, besides paying 20 per cent dividends annually, will have accumulated a surplus of \$855,409, thus bringing the book value of its stock up to \$542 a share. One of the copyrighted leaflets of the promotion is entitled "A Modern Gold Mine."

Besides those named, the directors of the Life and Insurance Company of New York as given in the literature are: Edmund W. Wakelee, James W. Husted, Horace De Lisser, Francis N. Chapman, President of the Chapman Contracting Company; Walter Pierce, George M. Dunlop, Frank E.

Bosworth, Joseph Veit, Fred C. Whitney, the theatrical manager; Theodore J. Deuscher, John Napier and J. S. Eakins. Mr. Napier, by the way, told the insurance examiners he was not a director in the company, hadn't been asked to become a director, nor notified of his election as a director. The advisory directors of the Manhattan Funding Company as given in the leaflets include some of these, and also A. P. Smith, cashier of the Mechanics Bank, Brooklyn, and Daniel O. Sprague, Deputy Collector of the Port of New York; and the officers are given as Reuben Stanley Baldwin, President; Harry West, Vice-President, and Maurice De Levante, Secretary and Treasurer.

LIFE PRESIDENTS TO MEET IN CHICAGO.

At the fourth annual meeting of the Association of Life Insurance Presidents to be held on December 9 and 10 in Chicago, the manner and extent of the treatment of life insurance as a study in the colleges and universities of the United States will be discussed. During the present year the association has been making an inquiry into this matter, gathering original statistics from nearly six hundred institutions of higher education.

In connection with the association's plans to prolong human life the following resolution was adopted:

"Resolved, That we hereby urge upon the attention of officers and agents of life insurance companies the need for them to co-operate in all efforts to improve sanitary laws and regulations and the enforcement thereof, and be it further

"Resolved, That the Life Extension Committee of this association be requested to formulate, if possible, a definite plan, to be reported at the next meeting of this association, whereby and whereunder its members may be able to help along, in some systematic way, the movement having for its general purpose the prevention of disease and the extension of the average human life."

THE EMPIRE STATE SURETY CO.,
84 William Street, New York

Trinity Finance Company

SUPT HOTCHKISS, of the State Insurance Department, issued on Monday a report on the examination of the Trinity Finance Company, which ceased to do business some time ago. The department in its statement says that the reason was that the company's plans were found to be a failure, and adds that the methods followed by those responsible are thought by the department to be "as characteristic as they are illuminating."

The Trinity Finance Company was incorporated in Maine in February, 1909, the incorporators being citizens of Maine, but apparently representing one George G. Hynson and a stockselling corporation known as Pratt & Grigsby. The promoters evidently intended that this corporation should have power to do anything, it being by its charter authorized:

"To promote companies, buy and sell their capital stock, purchase and sell bonds, develop and operate mines, manufacture, buy and sell steel and iron, construct bridges and reservoirs, buy and sell timber lands, indorse and guarantee bonds, buy and sell real estate, issue bonds and indentures, and enter into and carry out contracts of every kind and for any lawful purpose."

The issues of this corporation were to be, in common stock \$3,000,000, in preferred stock \$3,000,000, and in 5 per cent gold certificates \$3,000,000. The examination developed that nothing was paid into the treasury for the common stock, which was originally issued to Hynson and by him transferred to Pratt & Grigsby, and that the preferred stock was given to Hynson as a consideration for the adoption of his plan of insurance, and by him transferred to Pratt & Grigsby under an agreement that when the latter sold the gold certificates the purchaser must acquire an equal amount of preferred stock, Hynson, of course, to share in such money return. In the literature of this company, the

fact that the Title Guaranty and Trust Company of New York had agreed to act as trustee, for the purpose of accumulating a fund with which an insurance company was to be formed, was emphasized, and the subscribers for the gold certificates were furnished with copies of a trust indenture between the Trinity Finance Company and the Title Guaranty and Trust Company, the effect of which seems to have been that the trust company acted as agent for Pratt & Grigsby to receive for the account of the latter all moneys taken in by them on the sale of the gold certificates and preferred stock, and to hold the same in separate funds, one of which could be drawn on to the extent of about 27½ per cent of the total amount paid in, and the promotion expenses of the Trinity Finance Company and Pratt & Grigsby thus met.

An active campaign of the usual character seems to have been conducted for some months, with the result that, as shown by the books, there was received from subscribers \$39,309.54, and disbursed \$11,341.61, upward of \$10,000 of which was to Pratt & Grigsby, to cover promotion expenses, and that there is now on deposit with the Title Guaranty and Trust Company of New York, awaiting claimants, the sum of \$27,967.93.

This scheme of large promise and quick failure involved the organization of an insurance company—to be known as the Income Guarantee Corporation of New York—the purpose of which was to issue policies indemnifying against loss of income due to permanent disability from sickness, accident or old age. It doubtless included the absolute control of such insurance company by the stockholders of the Trinity Company, the total issue of whose common stock had already passed to Pratt & Grigsby, for nothing, and whose preferred stock of \$3,000,000 was—apparently without any cash being paid therefor—vested in them for sale.

MR. DAWSON DISAPPROVED THE TRINITY PROMOTION.

Mr. Hotchkiss's statement, as well as the report, refers to a letter from Miles M. Dawson as consulting actuary to Hynson on the feasibility of the original plans for insurance against total and permanent sick disability, and the field which exists for health insurance. Hynson advised Mr. Dawson later of the sort of a promotion scheme which had been planned to organize the insurance company. Then Mr. Dawson advised Hynson that he would not act as actuary for him or his corporation. Mr. Dawson added that he believed such a plan as they had to be essentially fraudulent. This refusal by Mr. Dawson occurred before the Trinity Finance had made either use or abuse of Mr. Dawson's letter in regard to health insurance. This state of facts was made known to the State Insurance Department before the report was filed.

CHICAGO AND THE UNITED.

It must be admitted that it was with glee rather than regret that Chicago insurance men last week received the report of the examination of the United Insurance Company by the New York department. Very few insurance men in the city had any confidence in the undertaking. To some the early connection of O. L. Van Laningham with the promotion was sufficient. There are others who still have sufficient confidence in Van Laningham's ability as a promoter to believe that if he had remained with the United at least the United Fire of New York would have been started ere this. They do not pretend to say that it would have been a successful company. Knowing Van Laningham's methods, they expected it to be promoted so expensively that the stockholders would be up in arms about as soon as it got started. The promoters' explanation is regarded as weak.

Protective Officers Reply

IN BEHALF of the Protective Holding Corporation, Robert R. Tuttle, as Acting President; Virgil H. Clymer, Vice-President; Frederick S. Dudley, Vice-President; Leonard H. Groesbeck, Treasurer; William H. Horton, Secretary; William N. Titcomb, Assistant Secretary, and Clarence W. Darling, general counsel, have signed the following statement in reply to the report of the New York State Insurance Department on the Protective Holding Corporation and the Protective Fire Insurance Company:

"Summarized, Superintendent W. H. Hotchkiss's report on the Protective, made July 31, 1910, states that the early organization work was conducted at an expense of approximately 22 per cent, and further estimates that when we have completed the raising of \$5,000,000 the total cost of organization may be between 11 per cent and 15 per cent. He does not, however, point out the fact that on May 1, 1910, the present plan of placing the securities by mail was adopted, which, from the time of its adoption up to July 31, secured approximately \$150,000 in subscriptions at a total cost to stockholders, including all fixed charges, commissions and all other expenses, of 14 1/3 per cent.

"Had the Superintendent examined the Protective the day it started to sell its stock, he would have found that the first expenditure for postage and stationery made the expense of organization several hundred per cent. Were he to examine the Protective to-day he would find that the present expense of placing the stock does not exceed 10 per cent, and later on it will, in our opinion, be less than 8 per cent. In his report, he has not taken into consideration the fact that the company is receiving from 4 per cent to 5 per cent interest on its funds during the organization period, which will materially reduce the organization expense.

"We have already secured 1,700 agents who are ready to write insurance policies the moment we have completed our initial capital and surplus. These agents have been selected for their experience, good standing and business producing ability. Insurance companies estimate the cost of securing agents at \$50 per agent or more. As a result of our campaign of soliciting subscriptions to stock, the Protective is well and favorably known in over 500 towns and cities of the United States. We now have a body of over 1,000 stockholders, of whom 201 are bankers and 674 are merchants located in forty-five States. The value of the agency plant we have already established, and the influence of 1,000 prominent business men as stockholders should be considered in connection with the organization expense.

"We object to Superintendent Hotchkiss alleging that we give the 'dividends' of twenty-eight companies as 71 per cent. Our booklet stated that the net earnings of these twenty-eight companies in 1909 were 71 per cent. We are in receipt of a telegram from Mr. Hotchkiss stating that he will correct this error wherever it is possible to do so. We also object to the word 'purporting' as used by Superintendent Hotchkiss. Our table does prove the fact that 71 per cent are the net earnings of twenty-eight New York State companies for 1909.

"All of the Protective stock is now being sold through the New York office by mail, and we now have more than \$300,000 sold, \$330,000 additional reserved for the directors at \$20 per share, and approximately \$75,000 reserved on options by original subscribers. The stock is now being sold on a commission of 5 per cent, and we do not believe the other expenses, including fixed charges, will exceed 3 per cent.

"Our cash assets are increasing daily, as the instalment subscriptions,

which are payable at the rate of 10 per cent per month, are now fast liquidating themselves.

"Our plan of stock distribution by mail has proved efficient, and the raising of \$5,000,000 is merely a matter of time. Subscriptions during the Summer months were received at the rate of \$500,000 annually, and this has now been increased to approximately \$750,000 annually.

"Mr. Hotchkiss has been kind enough to say in conversation at the hearing that of all the companies he has examined the Protective is the best one now being organized, and he believes we will succeed."

AN AVIATION FLIER.

Lloyds, London, has written a \$500,000 policy covering the public liability of the coming international aviation meet at Belmont Park for a flat premium of \$2,500, the line being placed through Paul E. Alberti, of Alberti & Carleton. The brokers have also arranged to obtain from the Columbia Insurance Company of Jersey City policies on aeroplanes covering them from the place of shipment while in transportation and in the hangar at Belmont Park during the meet. The policy is exactly like an ordinary automobile policy, except that the aeroplane is not covered for loss resultant from self-ignition or accidents due to defects in the machinery. The rate quoted is 3 1/2 per cent for one year. The employers' liability has been covered by the General Accident and includes the workmen's compensation indorsement as well. The fire insurance on hangars and other aviation property amounts to about \$15,000, at 1 per cent a month. Now that Lloyds, London, has undertaken the aviation, it is likely that American underwriters will follow, as they did in the matter of automobiles.

tate your stockholders, as well as your policyholders, on the wonderful achievements in this line. Great as has been your work and wonderful as are the fruits to which you may point, yet I venture here and now to suggest that in this work you have been aided at times by the viewpoint from the outside; and, while many may be loath to acknowledge it, supervision has at times turned the course of plans and propositions, and yet the business has profited rather than been retarded by the so-called interference."

A. W. Damon, President of the National Board of Fire Underwriters and President of the Springfield Fire and Marine Insurance Company, talked about "The Responsibility of the Individual." Mr. Damon said in part:

"While all corporations are considered fair game by the tax gatherer, it does seem as though they took especial delight in bearing down heavily upon insurance companies. And we are entirely helpless regarding the value of the property taxed as it is all in such form that the valuation

can be arrived at with exactness. Although railroad companies are now special subjects for consideration throughout the country, that interest certainly got the best of the fire insurance companies in Massachusetts by a law passed a few years ago. The law referred to provides that in case of destruction of property by fire caused by sparks from a locomotive, there should be deducted from the amount of the claim against them any fire insurance which the owner of the property might hold. When the bill was first brought up for consideration we paid no attention to it, as it seemed too absurd for serious consideration. To our amazement the bill became a law. I have no doubt the measure could have been defeated if we had given it proper attention, but it is one thing to prevent the passage of a bad measure and another matter to induce a legislature to back water and repeal a bad law. We made the attempt, however, and at the hearing I denounced it as the worst piece of class legislation ever passed by the Massachusetts Legislature. I said: 'If President Little, of the West End Street Railway Company (now leased by the Boston Elevated), should appear before you and plead for a law which provided that in case a street car ran down a person and maimed him there should be deducted from the amount of damages awarded by a jury the amount of accident insurance the man was carrying he would be laughed out of court.' And yet it was an exactly parallel case. Nevertheless and notwithstanding, the law still remains on our statute books."

In a paper prepared by President Brown, of the Connecticut Fire Insurance Company, and read before the Fire Insurance Commission of the Illinois Legislature in May last, he called attention to the fact that in France, Italy, Spain and Belgium—in all countries subject to the Code Napoleon, or whose laws are based thereon—the party having a fire is made responsible for the loss he may have caused, not for his own direct act only, but for his negligence and imprudence. Landlords are held responsible for damage to tenant property, or contiguous property, if caused in consequence of defective construction or neglect to keep his premises in what would be regarded as safe condition. In Havre fire set in any inhabited building, carriage or car, is punished with death, and the same punishment is inflicted upon persons convicted of incendiarism, if life is lost, in Brussels and in Hamburg.

"Henrik Ibsen, the Norwegian novelist and dramatist, in describing a visit to his native town of Skien, spoke of the destruction of his old home in a small conflagration caused by the carelessness of a maid servant. The maid servant, he says, was of course executed. So far as I know, no such fate overtook even Mrs. O'Leary's cow, though that bovine caused the destruction of Chicago.

In this land of freedom, carelessness of whatever degree calls for no punishment and little blame. It certainly is no bar to the collection of the full amount of an insurance policy.

"The laxity in the enforcement of some of our laws adds enormously to the loss of life and property in this country, and it is clearly against public policy to show such indifference to so serious a matter. Somehow, the feeling seems to be general that it is something which concerns insurance companies only, and they are expected to foot the bills without complaint, as that is what they were organized for. That companies are merely tax-gatherers, compelled to fix the penalty to fit the crime in every class of risk, does not occur to our lawmakers.

"The new liability laws, recently passed by the New York Legislature on the recommendation of the Wainwright Commission, show the tendency of the times very clearly. Not only is the burden of proof shifted to the employer, but there are other features of the law which make it fairly revolutionary. But woe be to the companies if they advance their rates to cover these added burdens. The experience of our railroads, in their endeavor to secure higher freight rates to meet the great increase in wages and other expenses, shows what opposition they are likely to meet. It seems to be human nature to load all responsibility for one's own acts upon some other fellow."

Among the other addresses was one by Robert Lynn Cox, general counsel and manager of the Association of Life Insurance Presidents, upon the subject, "Modern Co-Operative Methods to Meet Modern Tendencies of Governmental Control." He said in the main:

"The serious problem to-day with nearly every large business corporation is to adjust its affairs so as to meet and satisfy the modern demand for government control of corporations without sacrificing the object for which the corporation was formed. The demand for control or regulation, as it is sometimes called, is in many instances not unlike a demand for a controlling partnership interest in the business, but unaccompanied, however, by an investment in the business, such as stockholders are required to make in order to obtain such an interest.

"Never before have the people been more dissatisfied with the manner in which public officials conduct the public business than at the present time. Yet the people hitherto have never seemed so determined to take the control of private business interests out of the hands of their owners and put them under the control of public officials. The explanation of this inconsistency seems to be that we are all quite ready to impose upon others, or, as we sometimes say, 'the other fellow,' conditions that we would not tolerate for ourselves. Unfortunately for each business interest,

[of Liverpool, England.]

when standing alone it becomes 'the other fellow,' and is in the minority as compared with all other business interests combined under what we call 'the people.' We in the insurance business are 'the people' when it comes to fixing railroad rates, regulating the sale of drugs, or prohibiting combinations that would fix the price of food products. But we become 'the other fellow' and they 'the people' when the regulation and control of the insurance business is concerned.

"I develop this thought in order to suggest that the extension of government control of business is resulting from a constantly shifting combination of many interests against one interest fighting single-handed. The success of the movement lies in the fact that controlling 'the other fellow' appeals to the selfish interests of a majority, which cannot be successfully resisted by a minority. If the minority be divided among themselves their chances for success are lessened still further, if not entirely lost. Now, inasmuch as under our form of government it is definitely settled that the majority shall rule, it seems to me that government control has not only come to stay, but will steadily extend. Those who protest against restrictive laws being applied to them, and who can recall memories of greater freedom in times past, are fond of believing that the present tendency to interfere with the individual will of the owners of large business interests is but 'a swing of the pendulum,' and that we have about reached the end of the swing. It is my opinion that this pendulum simile, so often used to allay fear and express hope, has done more to mislead business men as to the real problem before them and how to meet it than any other sedative ever administered by the doctors and nurses of business ailments.

"Insurance companies have been accustomed to urge upon State Legislatures the need for a broad statesmanship, free from sectionalism or favor to one as against another, but by confining their preachment to times when they would be favorably affected by the advice they give and withholding

their advice at other times, their sincerity has been open to doubt. We must join hands with the States and show them how that which is evil may be restrained without destruction of that which is essential to the life and progress of the business. State officials are generally willing to listen to argument based on the interests of the business as a whole, though they frequently manifest impatience with a position taken by the individual company seeking to protect its individual interests. Why, then, can we not maintain organizations among ourselves which will not only work for the general interests of the business, but against which the charge of personal interest cannot fairly be raised, and against which it is not likely to be presumed.

"I say, therefore, that in order to meet the problem of statutory regulation we must come at once to regard it as the current of a flowing stream

and not the ebb and flow of a tide. This will lead us to cease battling against it and turn our eyes in the direction we must inevitably be carried whether we like it or not. It will put us in harmony with the forces of civilization and enable us to become an active factor in creating conditions under which our business must be carried on hereafter.

"But more important than this, we must cease to regard the creation of statutory pitfalls and ambushes for our competitors as a proper exercise of our ingenuity and as a legitimate field for legislative effort. With the enormous growth in the magnitude of our business there must come a quickening of our business conscience. While competition must and should continue in order that our business may not stagnate, we must not use or countenance those methods of competition which we would resent if used against us."

"Insurance is Commerce"

GEORGE F. SEWARD, President of the Fidelity and Casualty Company, addressed the Board of Casualty and Surety Underwriters on the subject "Insurance is Commerce." He said in the main:

"It would be idle for any citizen to say as a matter of his own judgment that the Supreme Court of the United States has erred in declaring that insurance is not commerce and cannot be dealt with under the interstate commerce clause of the Constitution and to expect people to be respectful of his opinion. And yet I may venture to say that the attitude of the Supreme Court has been inexplicable to many men of sound judgment. Insurance does not involve the sale of goods nor the transportation of merchandise, but neither the purchase and sale of goods nor the transportation of goods is commerce in a broad sense. Each operation is a part of commerce, and in the same way the insurance on goods in stock is a part

of commerce, and the buying and selling of insurance policies are operations of trade, just as much as if the value of the policies bought and sold was tangible at the moment instead of contingent.

"When the fathers of the Republic provided that Congress might control interstate commerce they did not define what commerce is. It is to be presumed that they intended that the internal trade of the country, as between the States, should not be hampered by State lines and regulations. Commerce was not to be halted, but was to be free. The conception was broad, and the constitutional provision has served its purpose notably. It has been one of the most potent reasons why the internal trade of the nation has proceeded on lines of satisfaction to all concerned and grown to enormous proportions. Insurance men, representing one of the greatest factors in commerce, and witnessing how other interests have prospered under national supervision while their

own has suffered under the vexatious burdens of State supervision, may not be blamed if they stand eager to hear that the aegis of national protection may be thrown about their business.

"The method of reasoning by which these hopes may be defended is authoritative. The State courts have over and over again held that insurance is a commodity, and that the operation of buying and selling is trade, a term synonymous with commerce. The Supreme Court itself has held that the buying and selling of lottery tickets is commerce, and that the operation of a correspondence school is commerce. If so, why is not the buy-

ing and selling of insurance policies commerce?

"The plan of this paper is to bring together these decisions in sufficient quotations so as to put the question up to Congress, whether the time has not come to act on the lines of better sense and in accordance with a better appreciation of the facts and considerations involved. For myself I do not doubt that if Congress were to enact any given piece of legislation based on the proposition that the interstate operations of insurance companies are interstate commerce, the Supreme Court would so far absolutely sustain the legislation. Will Congress do this? The answer is that Congress would be very likely to do it if the case were presented properly.

"I proceed to quote instances where the State courts have held that insurance is trade or commerce.

"The Kansas Supreme Court had before it a case (in re Pinckney, 27 Pac. Rep., 179) in which it was claimed that the word 'trade' as used in the title of an anti-trust act did not embrace the business of insurance. The court said:

"The question presented is, does the word 'trade' used in the title fairly indicate and include the provisions of the act with reference to insurance? It is argued that the usual meaning of the word should govern, and in that sense it has reference to the business of selling or exchanging some tangible substance or commodity for money, or the business of dealing by way of sale or exchange in commodities; and it is said that the use of the word in connection with that of 'products' in the title qualifies the meaning of 'trade' and makes it all the more apparent that the construction contended for is the correct one. That is the commercial sense of the word, and possibly may be the most common signification which is given to it; but it is not the only one, nor the most comprehensive meaning in which the word is properly used. In the broader sense, it is any occupation or business carried on for subsistence or profit. Anderson's Dictionary of Law gives the following definition: 'Generally, equivalent to occupation, employment or business, whether manual or mercantile; any occupation, employment or business carried on for profit, gain or livelihood, not in the liberal arts or in the learned professions.' In Abbott's Law Dictionary the word is defined as 'an occupation, employment or business carried on for gain or profit.' Among the definitions given in the Encyclopaedic Dictionary is the following: 'The business which a person has learnt, and which he carries on for subsistence or profit; occupation, particularly employment whether manual or mercantile, as distinguished from the liberal arts or the learned professions and agriculture.' A like definition of the word is given in the Imperial Dictionary. Rapalje

& Lawrence's Law Dictionary, to which we are cited by the petitioners, gives the restricted definition: 'Traffic, commerce, exchange of goods for other goods or for money.' It is the only authority, however, which uses the word in its commercial sense alone. Bouvier limits the meaning to commerce and traffic and the handicraft of mechanics; and we are also cited by the petitioners to the definition given by Webster which specifically is: 'The act or business of exchanging commodities by barter, or by buying and selling for money; commerce; traffic; barter.' This author, however, gives the more enlarged meaning of the word as well, as follows: 'The business which a person has learned and which he engages in, for procuring subsistence, or for profit; occupation, especially mechanical employment, as distinguished from the liberal arts, the learned professions, and agriculture; as we speak of the trade of a smith, of a carpenter, or mason, but not now of the trade of a farmer, or a lawyer, or a physician.' The broader significance given to the word by most of the lexicographers would fairly embrace and cover the provision of the act with reference to the business of insurance.'

"In Iowa the question arose (Beechley vs. Mulville, 70 N. W., 107) whether the business of insurance was within the purview of an act which prohibited agreements to fix the price of commodities. The court held that insurance was a commodity. * * *

"In Kentucky the Court of Appeals of that State (Aetna Insurance Company vs. Commonwealth, 51 S. W., 624) held that insurance was trade within the common law rule as to contracts in restraint of trade.

"In Ohio the question arose in a case (Taylor vs. Ross, 16 Ohio Decisions, 704) where several persons had been indicted for making a compact in reference to fire insurance rates. The court said:

"From the recognized and well-settled definitions and meanings of the words 'trade,' 'commodity' and 'commerce' as given by lexicographers, as established by courts and sanctioned and approved by long and general usage, it follows that these words could properly have been used in a sense broad enough to include fire insurance, by the Legislature, in the law under consideration, and that the words are susceptible of such definition as will include and cover fire insurance.'

"The Supreme Court said in Paul vs. Virginia that a contract of insurance is not an 'instrumentality of commerce,' but a 'mere incident of commercial intercourse.' Yet in a later case (Gloucester Ferry case, supra) the court said that anything is an instrumentality of commerce which aids and encourages it. Insurance manifestly aids and encourages com-

Home Office, HARTFORD, CONN.

merce. Hence, it is an instrumentality.

"There has been, and there must continue to be a steady development of the construction of the Federal Constitution to meet changing economic conditions. In the early stages of the discussion of the meaning of the commerce clause of the Constitution, it was thought to apply only to communication between the States by navigable waters. This probably was due to the fact that commerce between the States was almost wholly carried on by water communication. Since then the development of the country's commerce by means of railroad communication and the great changes that have taken place in economic conditions has led to applications of the clause that were not dreamed of early in the country's history. Thus, Congress now not only regulates railroad and other means of transporting goods from State to State, but it also regulates the business of telegraph and telephone companies as being engaged in interstate commerce. If a merchant arranges, by telephone or telegraph, with a company of another State for insurance, the telephone or telegraph message is held to be commerce between the States, but the contract of insurance that results is not. To the average man there would seem to be a flaw in this logic.

"In *Champion vs. Ames*, 188 U. S. 321, the Supreme Court held that the sending of lottery tickets from one State to another is interstate commerce. * * *

"The elasticity of the commerce clause and its adaptability to new conditions have been recognized frequently by the Supreme Court. Thus, in one of the earliest cases (*Gibbons vs. Ogden*, 9 Wheat., 1) Chief Justice Marshall said:

"Commerce undoubtedly is traffic, but it is something more—it is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribing rules for carrying on that intercourse."

"Mr. Justice Brewer in the *Debs* case, 158 U. S., 591, said:

"Constitutional provisions do not change, but their operation extends to new matters, as the modes of business and the habits of life of the people vary with each succeeding generation. The law of the common carrier is the same to-day as when transportation on land was by coach and wagon and on water by canal boat and sailing vessel. Yet, in its actual operation, it touches and regulates transportation by modes then unknown—railroad train and the steamboat. The Constitution has not changed. The power is the same, but it operates to-day upon modes of interstate commerce unknown to the fathers, and it will operate with equal force upon any new modes of such commerce which the future may develop." * * *

"It would surely not be a long step in advance of the court's present position to count insurance among the instrumentalities by which commerce may be carried on, and means by which it may be aided and encouraged."

"It is also important in this connection to bear in mind that the Supreme Court of the United States has, in reality, never passed directly upon this question. Congress has never passed a law which attempted to regulate in any degree the transaction of interstate insurance business. Consequently, the court has never had occasion to pass directly upon the question whether or not such a law would be constitutional. Each case in which the Supreme Court has held that insurance is not interstate commerce has been a case where some State has endeavored to impose upon a foreign insurance company some condition or penalty, and the company has resisted on the ground that as the company is engaged in interstate commerce, the State could not impose such a condition or penalty upon its business. We apprehend that in every case the court could have sustained the right of the State to impose the condition or penalty without deciding whether insurance was commerce or not. In other words, the decision that insurance was not commerce was not essential to the conclusion reached.

"We submit that the court has never passed directly upon the question as to the power of Congress to regulate interstate insurance under the commerce clause. That question can only arise when Congress passes a Federal supervision act, or some act which will clearly recognize that insurance is commerce. When it does pass such an act the court, acting under the rules which it has laid down for its guidance in deciding such questions, and because it can no longer logically adhere to the position that insurance is not commerce, must reverse its old position and enfranchise our business.

"In just what way insurance interests may want to bring about the end is a subject which I do not care to enter upon at the moment, but I commend it to the consideration of the younger and brighter men in our profession."

HURRELL GIVES ADVICE AT CASUALTY DINNER.

Alfred Hurrell, attorney of the New York Insurance Department and associate counsel of the Legislative Investigating Committee, who was one of the speakers at the banquet of the Board of Casualty and Surety Underwriters on Tuesday evening, stated that in his belief the corporation which paid for lobbying was extremely foolish. He instanced the successful fight of the casualty companies last winter to have rulings of the Insurance Superintendent reviewed by the court as the proper procedure.

Other speakers at the banquet were James V. Barry, Insurance Commissioner of Michigan; Edward L. Hearn, Vice-President of the Casualty Company of America, and John T. Stone, and Arthur I. Vorys, former Insurance Commissioner of Ohio.

OBITUARY.

William H. Blackford, President of the Maryland Life Insurance Company, died in Baltimore last Sunday. He had been connected with the company for thirty-one years and had been its President since November of 1887, a period of twenty-three years.

OF PHILADELPHIA

Hanover Finance Company Next

SUPT. HOTCHKISS issued a bulletin for publication yesterday in regard to the progress of the Hanover Finance Company of Maine, which in organization and scheme was largely due to George G. Hynson, and is still in active operation.

Instead of offering gold certificates and preferred stock to the public, as was done by the Trinity Finance Company, the Hanover Finance Company offered its bonds to the extent of \$500,000 on an arrangement whereby the purchaser was to receive its stock dollar for dollar for the bonds purchased, the money thus realized to the extent of 40 per cent to be paid to Hynson or used in promotion, and to the extent of 60 per cent deposited with the Carnegie Trust Company under a so-called "First Mortgage." Such mortgage appears, however, to be merely a trust indenture under

which the trust company acts as custodian for 60 per cent of the money received from the sale of the bonds. It thus still has in its hands out of a total of \$44,000 realized from bond sales about \$26,000 to the credit of the company. The 40 per cent promotion expense fund, aggregating upward of \$17,000, was at the time of this examination entirely dissipated.

The department report says:

"The insurance scheme is similar to that of the Income Guarantee Corporation, which was to have been organized by the Trinity Finance Company, but which was abandoned by it.

"In brief, the plan is to guarantee loss of salary or income due to total and permanent disability from any cause whatsoever which prevents the insured from following his specific occupation. * * *

"On page 8 of the prospectus a so-called illustration is given of the operation of the insurance scheme in the following words:

"Illustration No. 2—A bank cashier receiving a salary of \$250 a month has a wife and children depending upon him; has a severe attack of grip, which results in insanity.

"Then what will he do? He goes to an asylum and his wife and children go to work.

"If you were a bank cashier with a family and no means outside of your salary, wouldn't you pay \$6 a month to be guaranteed an income of \$1,200 a year for life should you become disabled?

"The company will not insure any one over fifty years of age, and the maximum policy will provide for an income of \$12,000 a year. No policy issued in excess of 70 per cent of income.

"This is not an untried enterprise! Its feasibility and success have been proven beyond any doubt by the fact that the plan is in successful operation in Germany.

"The premium rates were compiled by an insurance expert of international reputation; by the actuary who was employed by the State of New York to conduct the recent great insurance investigation which involved millions of dollars.—Mr. Miles M. Dawson, of New York."

"The loaded or gross premium rates compiled by Mr. Dawson for the disability annuity of \$600 per annum ceasing at age of 65 vary from \$17.47 at age of 21 to \$92.75 at age of 50, and the additional rates compiled by Mr. Dawson to cover an annuity of \$600 per annum payable after age 65—whether disabled or not, vary from \$28.37 at age 21 to \$197.58 at age 50. These latter rates, however, are net rates, not loaded for expenses, etc. Combining these rates, we get \$45.94 for age 21 to \$290.33 at age 50 for an annuity of \$600 payable through

life for a total and permanent disability and payable on arriving at age 65 whether disabled or not. This gives the premium at the youngest age (21) \$91.88 for \$1,200 annuity, and presumably the bank cashier mentioned in the illustration would be considerably older than 21, so that the premium would be considerably more than \$6 a month. It is true that the illustration does not state that the annuity is payable to those reaching age 65 who are not disabled, but the premium statement in the illustration is misleading, and the reference to Mr. Dawson is unfair and misleading, as he has not compiled any table of rates showing a premium of \$6 a month for an annuity of \$1,200 per annum payable through life to a disabled person. * * *

"In view of the fact that Mr. Hynson had for a consideration previously transferred his rights in the insurance scheme and the premium rates to the Trinity Finance Company, it is not clear what power he had to sell these rights over again to the Hanover Finance Company.

"It is significant that while this investigation was under way the company left this jurisdiction, removing its office to Jersey City, suspended the sale of bonds, adopted a plan of selling treasury stock, voted its President a salary of \$5,000 per annum, to take effect from the date of incorporation and changed its original purpose of organizing an Income Insurance Company under the laws of New York to that of organizing an Income Insurance Company under the laws of New York or any other State or country."

CHRONICLE PARAGRAPHS.

The bond of suretyship of August Ropke, ex-Secretary of the Fidelity Trust Company of Louisville, Ky., has been settled by receipt of a check from the Guarantee Company of North America for \$10,000.

Ropke's books were examined semi-annually by an expert accountant, who, however, failed to discover irregularities extending back over a period of some fifteen years.

* * *

J. D. E. Jones, who was formerly general agent of the Equitable for Rhode Island, has resigned as Vice-President and Rhode Island general agent of the Puritan Life Insurance Company. The company is doing business in Rhode Island and North Carolina, and has about \$2,000,000 insurance in force.

* * *

John W. Walker and Charles N. Bradford, who were bookkeepers in the employ of the North British and Mercantile, were arrested yesterday by detectives from the District Attorney's office. Frank B. Stone, the manager, declared that by juggling the books the men had robbed the company of about \$13,000.

In New England

BOSTON, Oct. 19.—A bulletin issued by the Secretary of the National Association of Local Fire Insurance Agents announces that President A. W. Neale has selected the following to be members of the Joint Conference Committee: C. H. Woodworth, Buffalo, Chairman; E. B. Case, Chicago; C. F. Hildreth, Freeport, Ill.; John C. North, New Haven, Conn.; C. I. Lunsford, Roanoke, Va. The company members of the committee are: E. H. A. Correa, of the Home, Chairman; Henry Evans, President of the Continental; W. B. Clark, President of the Aetna; Henry W. Eaton, manager of the Liverpool and London and Globe; Charles L. Case, manager of the London Assurance, and R. Dale Benson, President of the Pennsylvania.

The chief subjects to be handled by the committee in conference with the companies are "Trust Lines and Brokers" and "Uniform Blanks." The committee is also authorized to consider any other subjects which may be brought up, either by the companies or agents on the committee.

The new Committee on Agency Qualifications, authorized by the recent Chicago convention, comprises: Lyman M. Drake, of Chicago, Chairman; A. H. Robinson, of Louisville; R. F. Manly, of Birmingham, Ala.; P. D. Kiernan, of Albany, and R. H. Manchester, of Cleveland. O. B. Ryon, of the Illinois Insurance Department, has agreed to assist this committee in its work.

"Local agents, as a whole," comments the bulletin making the foregoing announcement, "look upon the work of this committee as of the utmost importance to the interests of the agency business. The National Association has been building up principles of protection to the agent in his territorial and expiration rights, and this has proved of general benefit

to all agents, irrespective of their standing. While the National Association has for some time been interested in this question, and has conferred with the National Association of Credit Men in regard thereto, the proposition has received a very decided impetus through the agitation of the expense question.

"It seems to be admitted on all sides that an important phase of this question is improvement in agency appointment, and it is with a desire to bring about this improvement, as the first step in the reform, that the National Association has provided for the appointment of a competent committee to consider the subject.

"In view of the fact that the committee's chief object is to draft an application blank for adoption by the insurance departments or by State law, the vote of the Insurance Commissioners at their recent annual convention indorsing the action of the National Association in the appointment of this committee, is regarded as assuring the general co-operation of the State departments in the reform."

Massachusetts Fire Agents to Meet.

Arrangements have been completed for the annual meeting of the Massachusetts Association of Local Fire Insurance Agents, at the American House, Boston, next Saturday, October 22. Manager Frank Lock, of the Atlas, President A. W. Neale of the National Association and Secretary F. H. Wentworth of the National Fire Protection Association will be the principal guests. A large and interesting meeting is looked for.

New England Brevities.

D. S. Pratt, Jr., for the last seventeen years identified with the Home Office of the John Hancock, latterly in charge of the Weekly Premium Policy Division, has resigned that position to enter the wool business in

partnership with his father. Last Saturday President Lamb, with well merited words of commendation, gave Mr. Pratt, on behalf of his associates, a handsome office desk and a travelling bag as souvenirs of their regard.

* * *

"Heterography," which scientific sharps call the condition of thinking one thing and writing another, is to blame for a reference to the Fire Commissioner of Boston as "Mr. Cole" in this column last week. The writer pleads for the indulgence of Mr. Daly, who is the Fire Commissioner, and that of the readers of this column. The reason for the mistake probably rests in the fact that, while the Fire Commissionership was in abeyance, Mr. Cole, a former Police Commissioner, was "mentioned" for the position.

* * *

Colonel Arnold O. Read, Vice-President of the John Hancock Mutual Life, entertained the members of the Massachusetts Historical Society at the Algonquin Club, Boston, last Thursday afternoon.

* * *

The Security of New Haven is to increase its capital stock from \$500,000 to \$700,000, privilege of subscription limited to present stockholders, and payments to be made by December 15.

* * *

At Chicago Munger, Vokum & Wetherbee have been appointed agents of the Massachusetts Fire and Marine; at Cleveland, Ohio, George H. Olmsted; at Akron, Hall & Harter.

* * *

The Boston Board is considering an increase of rates on warehouses containing wool waste of certain description, in view of the costly experience gained by the Crimmins & Pierce fire.

* * *

At last Saturday's meeting of the New England Insurance Exchange R. B. Ives was placed on the Vermont division of the Factory Improvement Committee, vice John J. Downey, resigned.

Fire Insurance Company

—OF—

NEW YORK

OFFICE:

46 CEDAR STREET, CITY.

CHICAGO, Oct. 19.—The movement for expense reduction in the West appears to be blocked by a deadlock between the two great company organizations—the Western Union and the Western Insurance Bureau. Unless a compromise can be reached it does not look now as if the committees of managers would visit the "excepted cities," as provided for at the meeting held early in the Summer.

Except in the six cities of Chicago, Milwaukee, St. Louis, Louisville, Cincinnati and Cleveland, over which the Union never has had jurisdiction, and the States whose laws prevent united action on commissions and practices, every union company, under the rules, is supposed to follow the union commission scale throughout the union territory. The non-union companies, having had no organization until recently, have been bound by no rules and have made such arrangements as they saw fit with their agents. They have not recognized the "excepted cities" as different from any other large cities, and some of them have excess commission arrangements in Indianapolis, Detroit and other places of importance. When the Western Insurance Bureau extended its jurisdiction over Indiana it did not include Indianapolis, thus making it an "excepted" city so far as the bureau was concerned. On November 2 it will hold a meeting and probably extend its jurisdiction over a number of other States which contain large cities. Whether it will except any of these remains to be seen.

The plan proposed early in the Summer was to take up first the union "excepted" cities, where conditions admittedly are the worst as regards commissions. This is the plan the bureau wants followed now, but the Union does not see it that way. If the various committees should work out plans for reducing commissions in the "excepted" cities it would reduce the expenses of the non-union companies so that they would be the better able to bear the present expense in other large cities and to maintain the present bureau scale of commissions which is higher than the union graded scale. Union companies consider that they would allow themselves to be used as catspaws to pull the non-union chestnuts out of the fire, if they should agree to any such piecemeal plan for dealing with the expense question.

With the present clamor for reduced expenses, the union companies certainly would not be justified in increasing commissions to the bureau scale in order to get uniformity, nor do they desire to do so. While the bureau scale meant a reduction for some of the companies which entered the organization and was therefore consistent with present tendencies and demands, yet the bureau scale gives them an advantage over union companies in dealing with agents. The union companies are not ready to enter into a deal where other companies admittedly have an advantage over them. It looks, therefore, as if the Union would scarcely co-operate with the bureau on any expense reduction proposition until the two classes are placed on an equal com-

mission basis. In other words, until the bureau adopts the union graded commission scale. The non-union companies, some of which have had to make sacrifices to get down to the bureau scale, are not very likely to make a still further reduction in commissions throughout the field, so a deadlock is caused that may continue indefinitely.

* * *

Several of the smaller fire insurance companies of the West have been approached recently by George H. Scott, who has presented to them a proposition for consolidation with others of the weaker sort. Mr. Scott used to run a general agency in Chicago, representing the National of Allegheny and the Northwestern Fire and Marine of Minneapolis. What success he has met with in his new undertaking is not reported. There are several struggling institutions in the West that, it would appear to an outsider, would much better merge.

* * *

It is reported on what seems to be good authority that a number of the fire companies that are not over-supplied with surplus are arranging to reinsure their term business or have done so already. There has been much complaint about losses in the West all this year with the exception of perhaps a couple of months. As the losses have come on all classes without much discrimination, it is fair to presume that the small companies have had to take their share with the large ones and that some of them will need to release reserves in order to make a respectable showing at the end of the year.

* * *

Announcement last week of the plan for an underwriters' building is said to have cost the promoters of the scheme about a hundred thousand dollars. The plan contemplates a mod-

ern fireproof building twelve stories high, to be located at the southwest corner of Jackson Boulevard and Sherman Street. It appears that present lessees of the buildings on the ground were being negotiated with, but their leases had not all been secured, when a broker told what was going on, and the remaining lessees at once became bulls on the market.

It has been understood for some months that the local fire insurance agencies would leave 159 La Salle Street within a couple of years. Rents in the present building have gone up to a point where the agents have protested vigorously. The Chicago Board of Underwriters is reported to have engaged ten floors of the new Underwriters' Building, which it will let to insurance tenants. Manager Glidden, of the board, hopes that in time at least 75 per cent of all the insurance interests of the city—fire, life and casualty—will be housed under one roof. The gathering of nearly all the local fire offices of the city at 159 La Salle Street has proved the vast advantage of having the agencies in one building.

The removal of the insurance interests to the Underwriters' Building will change the map of the Chicago insurance district. At present the district may be said to centre at the corner of La Salle and Monroe Streets. Jackson Boulevard is two full blocks south of Monroe Street, and the site of the Underwriters' Building will be slightly west of La Salle—just west of the Board of Trade and across Jackson Boulevard from the Royal Insurance Building.

* * *

The Chicago Board of Surety Underwriters held about the best meeting in its history last week, when new officers were elected. Very little complaint is heard of conditions in the surety business in the city. The only non-tariff company in the city

writing surety lines is the American Fidelity, and it does not do a large bonding business in Chicago, nor is there complaint about its surety rates. There are several non-tariff fidelity companies and there is complaint about the rates some of them offer.

The most unsatisfactory part of the whole local bonding situation is that relating to brokers. The board originally recognized as persons proper to receive commissions the brokers approved by the Chicago Board of (Fire) Underwriters, together with some others who are engaged in the surety business to an appreciable extent. This is not satisfactory. Comparatively few of the 3,000 fire brokers do enough surety business to deserve recognition in that branch. With unsatisfactory rules, some offices have paid commissions to persons held by others not entitled to receive them. One of the prominent officers of the surety board says that he hopes satisfactory rules will be worked out this year, under which the board will pass upon the qualifications of its own brokers and not accept those of the fire board simply because the fire board recognizes them.

Bob's Remarks

THE Attorney General of Indiana has ruled that the tax to be collected from fire companies should be 2 per cent on gross premiums, instead of 5 per cent on net premiums. As this applies to business of five years back, many of the New York and New Jersey fire insurance companies doing business in Indiana are making plans to contest the claim. Arrangements have been made for a test case between Thomas Bates, of Chicago, attorney for the companies, and the Indiana Attorney General.

Very broad charters are sometimes troublesome. They are often convenient for certain purposes, but frequently collide against laws, especially of modern creation. This is the case with the old Monongahela Insurance Company. Its charter permits nearly everything. Organized over fifty years ago, under the broad laws of Pennsylvania, the powers of the company allow all kinds of insurance, including the word "otherwise." As an unknown quantity, this might apply to transportation by air. Before the entrance of the Monongahela into New York State all of the "frills" in the charter will be eliminated, so as to comply with the law. Whilden & Hancock will be the general and metropolitan managers. The company will probably enter in December.

The time for the filing of policies for accident companies with the Insurance Department at Albany expired on Saturday last. Superintendent Hotchkiss states that most of the companies have complied.

A stockholders' meeting of the Travelers' Indemnity Company of Hartford will be held on November 14 to decide upon an increase of capital from \$500,000 to \$1,000,000. This proposed action is for the purpose of providing for the expected increase of business owing to the new laws as to workmen's compensation. New shares are to be issued at \$150 each, the premium going to surplus.

When the Sovereign Fire Assurance of Canada enters New York State it is expected that Starkweather & Shepley will be the metropolitan managers.

The Home of New York has reinsured the risks of the Commercial Union of London, located in unprotected towns in Texas.

E. V. Hoyt, superintendent of rates and inspections for the Suburban Fire Insurance Exchange, has resigned. He is a most capable and experienced underwriter.

A peculiar case came up a few

days ago. For more than five years a certain risk had been placed in a large American company by an old line insurance man. Without noting the fact that he held no certificate, the commission had been paid to him regularly for years, because he was well known as a broker. Suddenly, on the last renewal it was discovered that he was not "listed." The premium was then charged to a certified broker and that settled the matter.

On Saturday, November 27, it is stated that the Pennsylvania Railroad will introduce its full train service to and from the new terminal station, Seventh avenue and Thirty-second Street. It will be a great boon to every one—local or suburban residents.

Announcement is made that the stockholders of the Hawkeye and Des Moines Fire Insurance companies have decided to consolidate the two institutions under the name of the Hawkeye and Des Moines Fire Insurance Company. It will be the largest Iowa company having a combined capital of \$200,000, surplus \$260,000 and total assets of over \$1,500,000.

J. G. Cloud, formerly manager for the metropolitan and suburban district of the American Fidelity Company, is now connected with the Selden Motor Vehicle Company. He expects, however, to return shortly to the business of liability insurance.

At the office of the New Amsterdam Casualty Company a meeting of the Burglary Insurance Underwriters' Association will be held on October 25. General discussion of the burglary insurance situation will be the subject for consideration.

At a recent meeting the stockholders of the William Penn Fire Insurance Company voted to increase its capital from \$100,000 to \$250,000. Pettibone & Krouse, of Philadelphia, have been appointed managing underwriters for the United States.

The Insurance Directory of Greater New York, Newark, Elizabeth, Jersey City, Hoboken and Bayonne for 1910 and 1911, has just been published by the "Insurance Record." With this issue the "Record Directory" celebrates its twenty-ninth anniversary.

The Alliance of London is now considering the re-entrance of the United States. Purchase of an American plant is in contemplation. For a long while the company did a purely surplus line business in America. Who will be the United States manager is an open question. The Rothschilds are quoted as large holders of the Alliance stock.

Chelsea's Recovery From Conflagration

BOSTON, Oct. 26.—At the dedication of the new City Hall in Chelsea, Mass., last Saturday, much praise was given the Board of Control for its work in aiding in the regeneration of the city, following the conflagration disaster of April, 1908. Among those who spoke was Mayor Fitzgerald, of Boston, who said in part:

"The one thing that impresses me most about the work accomplished is in the building regulations. A new fire code has been established here,

and it is being enforced, with the result that an entirely new type of building construction exists. While there were many who severely criticised these building regulations, every sensible citizen realized that the annual waste by fire loss in this country, if not prevented, would ruin every fire insurance company in the world and would some day bring about a situation which would make the cost of fire insurance prohibitive.

"I congratulate the city upon the establishment of a separate department for building inspection. This

means that no city is worthy of the name which does not enforce the strictest regulations in regard to building inspection. The matter of fire escapes is of importance, especially to school buildings, and every home and factory should give ample protection to the people.

The prompt assistance, waiving technicalities, afforded by the fire insurance companies, which covered some \$8,000,000 of the \$17,000,000 loss sustained on account of the Chelsea conflagration, received little or no recognition during the ceremonies.

Massachusetts Local Agents Meet

BOSTON, Oct. 26.—The annual meeting of the Massachusetts Association of Local Fire Insurance Agents took place on Saturday morning at the new American House, Boston. Last year's ticket of officers, headed by President C. H. Cornish, of New Bedford, was re-elected, with this exception, that William H. Rogers, of Boston, was chosen to succeed Oliver Walker, of Northampton, on the Executive Committee. The following resolution was adopted:

"Resolved, That we indorse the action of the National Association of Local Fire Insurance Agents upon the subject of 'Cost of Fire Insurance,' especially commending the stand taken in respect to the reduction in rates through improved hazards, the elimination of dishonest losses and the settlement of all claims upon a basis of actual loss.

"We also record our approval of the National Association's position in respect to the matter of fire insurance expenses, and do not believe that the conditions call for any general reduction in commissions.

"We commend the national association for its appointment of a special committee to consider higher standards of agency qualifications and to

recommend license laws to the States covering this subject.

"We believe improvement in the standard of agency appointment to be of paramount importance to the business, to be considered by companies and agents as the first step necessary to any changes desired for the betterment of the business.

"We approve the action of the national association in respect to the matter of agents' compensation, and respectfully request the companies to consider the suggestions made that commissions of local agents in the East and South shall be placed on the same basis, or its equal, as paid in the West.

"We deprecate the excessive commissions and excessive agency appointments in some localities, and believe that a reformation of these evils would benefit the public and reduce the cost of insurance.

"We authorize the Executive Committee to take such action in regard to these matters as to it may seem best, and suggest also that the National Committee on Agency Qualifications submit its report as early as possible, and not later than December 15."

After the dinner, which followed the meeting, a letter was read from

Frank Lock, of the Atlas, who was expected, regretting his inability to be present. Franklin Wentworth, Secretary of the National Fire Protection Association, spoke most interestingly regarding the genesis and scope of action of that organization. He noted that the fire loss per capita in Europe averaged 33 cents, against more than \$3 in America.

Fifteen years ago certain classes of factories were constantly burning, so that there was danger that the companies would refuse to insure them at any price. This led to the formation of the Factory Improvement Committee of the New England Insurance Exchange. It was found that each industry had some special hazard, and the committee set about to segregate these hazards, so as to render them very much less perilous. One improvement led to another. Automatic sprinklers were considered, of which there were at one time nine different standards in use within a radius of 150 miles of New York City.

Thus the National Fire Protection Association came into being twelve years ago, its object being to reconcile the differences in fire protective means, and secure the adjustment of standards. Singularly enough the public at large considered the associa-

tion an insurance company. As a matter of fact it included in its membership architects, engineers, credit men, water works men and other branches besides the fire underwriters. Its committees worked without pay in their leisure time for the general good. One task the association was engaged in was to secure the manufacture of uniformly good fire hose. It also was working to rouse the public indifference as to the fire waste by means of its publicity work. Its members aim to make the public realize what this loss of \$3 per capita means to the American citizen. Everything we eat, drink or wear carries a fire tax, and this means a tax of \$50 per annum in this country for a family of five. As long as the country suffers from the conflagration habit, it is the duty of the companies to obtain sufficient premiums to cover it. If legislators limit the income of the companies it is also their duty to limit the outflow. The underwriting loss for the last ten years, unassisted by the banking element, amounted to 3 per cent. If capital should withdraw from fire insurance as a result of such conditions then business credit will

also suffer. It is one mission of the local agents to show the people these facts. The standard of agents should be kept high; they should be the educators of the people. Mr. Wentworth's splendid address, of which the foregoing is but a bare outline, was received with well merited applause.

An uncommonly instructive talk was also given by W. B. Medlicott, general agent of the Atlas, and fire insurance instructor at Harvard University. He set forth that the aim of his curriculum was not only to teach those that intended to take up fire insurance as a business, but also to send men out into the world who would take a proper view of the institution, and play a helpful and prominent part as moulders of public opinion, even though they do not engage in the business. Mr. Medlicott gave an outline of the collateral subjects touched upon in the course of his instruction at the university, and it certainly warrants the hope that the rising generation will take a sensible and just view of the nature of fire insurance, and realize that, whatever oppression it undergoes, is sure to react upon the public at large.

New England Brevities

THE Boston Life Underwriters' Association opened the season with a smoke talk at the City Club last Tuesday. Marlen E. Pew, editor of the "Boston Traveler," spoke on "The Psychology of Approach"; Glover S. Hastings, superintendent of agencies for the New England Mutual Life, on "Agency Conditions," and Charles E. Fish, State Agent of the Phoenix Mutual Life, on "The Man; The Agent; Comparisons and Possibilities."

* * *

H. A. B. Peckham has resigned his position as Secretary of the Boston Mutual Life, which he has filled with signal ability since May 1, 1909, to accept a secretarial position with the Empire Life Insurance Company of Seattle, Wash. Mr. Peckham began his insurance work in 1897 as cashier of the Lynn Agency of the John Hancock Mutual Life. He subsequently accepted a position as agency auditor of the Boston Mutual, with successive promotions to assistant superintendent of agencies, superintendent of agencies and Secretary following. He also edited the company's paper, "The Live Wire," up to May, 1909. Mr. Peckham will be a distinctly valuable acquisition to the official staff of the Empire Life, and expects to enter upon his new duties on November 9 prox. Frank H. Viele, superintendent of agencies of the Boston Mutual Life, has been elected to the secretaryship in place of Mr. Peckham.

A reception was given at the Boston City Club last Tuesday evening to Mr. Peckham by the directors, gen-

eral agents and superintendents of the company.

* * *

Arthur O'Leary has resigned as Secretary of the Roger Williams Fire and Marine, of Providence. Fred D. Cross, formerly New England Special Agent of the Westchester, was elected as successor to Mr. O'Leary. It is planned to reorganize the company with a capital of \$500,000 and a surplus of the same amount.

* * *

Wakefield, Morley & Co., of Hartford, are to manage the New England field of the United Firemen's when it re-enters this section.

* * *

The Boston Board of Fire Underwriters at Tuesday's meeting voted that in order to meet Western competition brewery risks could be written at two annual rates for three years and three annual rates for five years. Also, premiums on wool waste warehouses were materially raised to rates ranging from 1 to 2 per cent, according to conditions.

* * *

The United States Casualty is now writing mercantile open stock and safe burglary insurance, in addition to residence burglary, larceny and theft lines.

* * *

W. S. Redfield, the successful general agent at Providence of the New England Mutual Life, was married recently to Miss C. S. Hastings, daughter of Glover S. Hastings, superintendent of agencies of the company.

EMIL SCHWAB.

OBITUARY.

Edward Agnew.

Edward Agnew, who was connected for nearly twenty-five years with the Pittsburg agency of the Equitable Life Assurance Society, died at the advanced age of 83, after an illness of nearly two years, at his home in Sewickley, on October 20. He was born in Rathfryland, County Down Ireland, August 25, 1828. He came to New York on a sailing vessel in 1846, settling first in Paterson, N. J., coming to Pittsburg in 1850, when he was connected with the old firm of John Dunlap & Co. In 1860 he went to Fort Wayne, Ind., where he was a partner in the tin and hardware business of Ashe & Agnew. He and his partner raised and equipped a battery for the Union Army. In 1865 he returned to Pittsburg and became a partner in the tin firm of Fleming, Agnew & Co. Some years later the Pittsburg Stamping Company was organized, of which he was the leading partner, in which tin and hardware business he remained until 1886, when he entered the insurance business with the Equitable through the Pittsburg agency.

Arthur R. Briggs.

Arthur R. Briggs, President of the Western States Life Insurance Company, died at San Francisco on Monday after a brief illness. He went to California from Ohio in 1876, and since then had been closely identified with the development of California's resources. For fifteen years he was President of the California State Board of Trade, and was afterward head of the California Development Board. When the new life insurance company was organized he accepted the Presidency. He was a large land owner in the Sacramento and the San Joaquin Valleys.

William P. Harford.

William P. Harford, assistant general agent of the Northwestern department at Omaha of the Aetna Fire, died on Tuesday after a long illness. Mr. Harford underwent an operation several months ago, but its relief was only temporary. He was 74 years old and had been with the Aetna for forty-five years. He was a teacher at Morrow, Ohio, and incidentally started a local agency, representing the Aetna. He became district special agent and formerly Ohio State agent, and in 1892 followed Mr. Wyman to Omaha as his assistant in the general agency.

No New York employer need look beyond the advertising columns of THE CHRONICLE for LIABILITY INSURANCE.

LIABILITY UNDERWRITERS AT THE PLAZA

Addresses on Current Conditions and Present Problems Delivered by S. H. Wolfe, Charles Hughes, Miss Crystal Eastman, H. V. Mercer, Miles M. Dawson, August Belmont, John Mitchell and P. Tecumseh Sherman at the Annual Meeting.

THE fourth annual meeting of the Liability Insurance Association, which opened its sessions on last Wednesday afternoon at the Hotel Plaza and continued through Thursday, the following companies were represented: Aetna Life Insurance Company, Casualty Company of America, Employers' Liability Assurance Corporation, Empire State Surety Company, Fidelity and Casualty Company, Frankfort Marine, Accident and Plate Glass Insurance Company, General Accident Assurance Corporation, London Guarantee and Accident Company, Maryland Casualty Company, New Amsterdam Casualty Company, Ocean Accident and Guarantee Corporation, Pennsylvania Casualty Company, Philadelphia Casualty Company, Pacific Coast Casualty Company, Travelers' Insurance Company, United States Casualty Company, United States Fidelity and Guaranty Company, and the Union Casualty Company, which was elected a member last week.

The preliminary session was devoted to a discussion of the question of liability loss reserves, their inadequacy under present methods of calculation, and suggestions for legislation designed to provide proper reserves.

The first paper was read by S. H. Wolfe, who gave a brief and concise statement of what he believed to be the defects of the present systems of computing loss reserves, and explained the important factors in calculating such reserves. He then said:

The law of averages applies to liability insurance as it does to every other field of activity. The practical operations of insurance companies

would be rendered impossible without it. It will require no demonstration upon my part to prove that the larger the number of happenings exposed to observation the more reliable will be the resulting statistics, and it seems to me that therein lies a solution for this problem—in other words, that a careful observation of the practical operations of the companies will enable us to derive the actual cost for the various forms of policies—i. e., the pure premium for the particular hazard. I imagine that no company in this country has been able by its own operations solely to accurately fix the cost for each particular class. Individual companies have individual underwriting and adjustment ideas. If we are able, therefore, to obtain the experience of all the companies and correctly tabulate it we would have not only the benefit of an extensive field of observation, but, in addition thereto, we would be able to eliminate those conditions which, I have just pointed out, may be peculiar to any one company.

Attempts in the past to get the companies to co-operate in the preparation of statistics of this kind have not been successful. It is not my intention to attempt to find out why the movement has not been a success. I am convinced, however, that failure must inevitably result from an attempt to secure the figures by mere company agreement. In this emergency it would appear that the State could profitably and properly step in and require the tabulation to be made under its supervision. Under these circumstances all companies would doubtless be had to contribute their experience with a full realization that the details of their business would not be exposed to the gaze of competitors, but would be used solely for the purpose of deriving a factor which they need for their own protection.

I am fully aware that an objection against the use of "pure premiums"

derived from the experiences of the past will be urged. I recognize fully that the changes in the laws and in the attitude of the courts, which I have pointed out a few moments ago, will operate to render those premiums more or less insufficient, but ways exist for correcting this condition. In the first place the calculation would be a continuing process, and each year, therefore, there would be introduced a correcting factor. In the second place it would be possible, in my opinion, to provide temporarily for an arbitrary constant which would represent the necessary addition to the pure premium according to the best judgment of competent underwriters.

Having derived the pure premium, the procedure to obtain the reserve would be as follows: The business of any calendar year would be arranged by classes, and opposite each class would be placed the pure premium (plus the constant) which should have been received on the basis of the standard experience. From such net premium receipts would be deducted the payments which have been made to policyholders in each of the tabulated classes. The difference between the premiums and the payments would be the amount which the company should hold as a reserve to take care of the future losses of that class. As the claims of each year are disposed of the reserve would automatically disappear. It will be noted that the application of this method for a number of years will yield results which will not require the use of the arbitrary constant referred to, and it seems to me that among the advantages which it possesses is the one which removes from the consideration of the loss reserve the premium which was charged to the insured—rates made in competition, therefore, cease to be a disturbing factor in this method of calculation.

I have attempted to show that the premium is the substance and the loss reserve is the shadow; if the premium be once derived by safe, sane methods, loss reserves will take care of themselves. The derivation of the premium in the manner outlined will enable the State to insist that no premium lower than the recognized minimum rate shall be charged by any company. Similar action is now enforced by the State in its supervision of life insurance companies, for if one of these companies should use premiums less than those prescribed by the tables of mortality and interest fixed by the State as a minimum standard, it is visited with a penalty in the shape of additional reserves and the penalty has proven to be severe enough to deter any company from following a course which in the opinion of the State would be unsafe.

The method suggested above would entail no hardship upon the well managed company; if the minimum rate should be higher than that required by its careful underwriting, the difference would be temporarily carried in its loss reserve and ultimately find its way into its surplus. To summarize, I would say that in my opinion the new compensation law will have a decided effect upon the loss ratio of the companies, and, therefore, upon the questions of reserves which should be maintained for the unpaid losses. For the method suggested above no originality is claimed, for the idea must have been in the minds of practical underwriters for some time. If, however, I have succeeded in making the necessity for concerted action in this direction more apparent to you, I feel that I have accomplished the purpose of my talk.

Charles Hughes Talks.

Charles Hughes, chief examiner of the casualty companies for the New York State Insurance Department, also made an address, in the course of which he pointed out the inequalities of the present systems of loss reserve computation, showing by the citation of their operation in regard to the claims against undivided companies that they were entirely inadequate. He said in the main:

It is a feature of the liability business that the loss payments on the business written in any one year are not completed until from eight to ten years have elapsed. In order to as-

certain whether the business is being conducted at a profit or not it is, therefore, necessary that some basis be adopted for finding the present value of the future loss payments. It is preferable that the basis adopted should produce even higher reserves than is absolutely necessary, rather than lower reserves, as if the reserves are much lower than is necessary a company may, by paying large dividends to stockholders and charging low rates for the insurance, find itself in a few years without enough funds to pay its accumulated losses.

Another weakness of these laws is clearly demonstrated by a study of the average costs obtained under the New York law. In the 1909 statement the young companies had to charge \$28.40 for each notice and \$512.19 for each suit, these averages having been obtained from the combined experience of the older companies, while the individual experiences of the older companies gave costs varying from \$22.82 to \$40.13 for notices and \$401.06 to \$672.63 for suits. It may be that some of the young companies reserving on the averages derived from the combined experiences are actually doing a class of business that will result in ultimate costs as large as the largest or as small as the smallest of the older companies; in either case the using of the averages produces a reserve which is not a proper present value of its outstanding losses. Also the suit cost is too small, being the average cost of all suits settled, whether settled soon after the happening of the accident or later, while it is only charged against suits where the injury is at least eighteen months old. The law is also illogical in that no deduction is allowed for partial payments on account of these suits. If such deduction should be allowed, however, the present inadequacy reserves would be still further reduced.

The insufficiency of the reserves for the older companies produced under these notice and suit cost laws is admitted by many of the companies themselves, although it cannot always be clearly demonstrated from their annual statements. For the young companies using the average derived from the combined experience, and for some of the small old companies using their own averages, the insufficiency under the New York law can be readily demonstrated. The method followed to test the 1907 reserve

is to deduct from the reserve of 1907 the amount entered in line 28, page 7 of the 1908 statement. This gives the balance remaining at the end of 1908 to provide for the losses reported prior to the end of 1907 and still outstanding at the end of 1908. From page 19 of the 1908 statement we find what this amount actually should be by taking the whole of item 1 plus one-third of item 2, minus one-third of item 3. The 1908 reserve can be tested in a similar manner. The results for companies shown in the following schedule are most significant:

Company.....	Year.....	Deficiency.....	Percentage of deficiency to total reserve.
1.....	1907	\$307,140	21.9
	1908	559,401	49.4
2.....	1907	370,536	34.4
	1908	491,967	70.7
3.....	1907	15,675	26.2
	1908	40,627	45.6
4.....	1907	111,510	21.3
	1908	161,501	31.3
5.....	1907	111,730	8.1
	1908	209,081	21.5
6.....	1907	57,506	46.2
	1908	113,516	121.8
7.....	1907	46,341	9.8
	1908	168,082	52.8
8.....	1907	61,457	123.7
	1908	46,767	62.3
9.....	1907	83,594	60.1
	1908	133,152	184.1
10.....	1907	62,179	284.9
	1908	43,850	98.9
11.....	1907	150,387	57.3
	1908	237,280	103.1
12.....	1907	147,798	23.8
	1908	245,524	38.0

Although taking a full one-third of the eighteen months' notices and only deducting one-third of the payments in making this test probably results in too many notices being used and not enough of the payments deducted, there is little doubt that the deficiencies will ultimately prove to be greater than those shown, as the "inadequate" reserves produced under the New York law for a subsequent year have been used to prove the deficiencies for a previous year. Many of the companies voluntarily charged additional reserves, which, in some cases, were greater than the deficien-

cies shown. The reserve at the end of 1907 was less than the amount paid during 1908 on losses outstanding at the end of 1907 for five companies, and a similar condition existed with regard to the 1909 payments on losses outstanding at the end of 1908 for five companies also, three of the companies being in both groups.

Another weakness of these laws is the fact that it takes many years for increases in the cost of each notice and suit to make any appreciable increase in the average costs used by the companies to calculate the loss reserve. It is generally thought that part of the inadequacy of the loss reserve is due to the treatment of the expenses incident to losses, particularly the unallocated expenses. This is probably true and could be partly overcome by defining either in the law or by a departmental ruling what shall be charged as claim expenses and how the unallocated claim expenses shall be distributed.

Hughes Discusses Remedies.

Mr. Hughes analyzed the suggestions contained in the special report on reserves recently prepared by a special committee of liability companies, and in regard to this and the various plans suggested had the following to say:

One of the strongest arguments in favor of Plan E—applying equally to Plan B—is the notice it gives to companies just commencing that they will have to reserve on the basis of an ultimate loss ratio of at least 55 per cent. A definite ratio will do much to prevent extravagance and rate cutting by new companies. For instance, a company should know that at the end of the first year out of every \$200 premium \$100 would be charged for premium reserve and \$55 for loss payments and loss reserve, leaving only \$45, or 22½ per cent for expenses and profits. If, as is generally expected, the effect of the new workmen's compensation laws and the changes in the liability law will result in a considerable increase in the ultimate loss ratio, it is most important that any loss reserve law should be at least as elastic as Plan E. The suggestion has been made that any new law should commence somewhat as follows:

Each such company shall charge as a liability an amount equal to the present value of its outstanding liability losses, in no event, however, shall such amount be less than the reserve for liability losses computed as hereinafter provided.

The purpose of this is to "put it up" to the company to charge more than the reserve computed on the basis provided in the law if the peculiarities of the company's business indicate any necessity for a higher reserve. It seems perfectly proper to put the onus of carrying sufficient reserves on the officers of the companies, who are, or should be, in a better position to estimate the reserve than State officials. Another thing which prompts this suggestion is the fact that in the past one or two companies have charged merely the reserves produced by the law, knowing them to be very inadequate, giving as the reason that they are doing everything required by the law.

It is apparent that the broadening of the Employers' Liability law of this State will materially increase the average cost of each notice of injury and will also increase the average cost per 100 of earned premiums. The compulsory Workmen's Compensation law will have a similar effect, for the reason that even if the companies were in possession of enough data to calculate the exact premiums necessary to cover the risk, the percentage of commission paid to agents will have to be much smaller than the percentage hitherto paid on ordinary liability policies. There are two reasons for the decrease in the agents' commissions; one is that otherwise the premiums would be so high that the employers would start companies of their own, and the other that the employer who is subject to a workmen's compensation law will not require any education on the subject of the necessity of carrying insurance.

The "Committee on Reserves Other Than Life" of the National Convention of Insurance Commissioners has given considerable thought to the question of the sufficiency of the reserves produced by the various liability loss reserve laws of the different States, and in its report to the convention at Mobile in September of this year suggested that it be instructed to continue its study of the matter with the committee of the companies and endeavor to frame a law and submit it to the Insurance Commissioners of the States in time for them to introduce it at the next legislative sessions. It is proper here

Protective Fire Insurance Company

OF SYRACUSE, NEW YORK

Capital, \$2,500,000 Surplus, \$2,500,000
(Now Being Provided)

The public advertising of the PROTECTIVE will be the most distinctive and efficient ever put out by a fire insurance company. It will include the use of magazines and newspapers, the development of local business for local agents by new methods, and will talk the idea of fire insurance and the idea of the right company and the right agent, as those ideas have never been talked before.

Live fire agents, wishing to represent a strong and progressive Company, should write promptly to

Tuttle, Wightman & Dudley

Managing Underwriters for the United States
SYRACUSE, NEW YORK

to refer to the whole-hearted manner in which the members of the Companies' Committee have devoted much time and energy to the study of this matter and the compilation of a great quantity of most instructive statistics:

New companies are springing up every day, and it is most important that they should not be permitted to accumulate a large premium income

without carrying a proper reserve to provide for the large amount of deferred loss payments which must inevitably be made. A new law producing adequate reserves will act as a protection for the older companies against suicidal rate cutting by new companies, and will also protect the new companies against the fatal results of their own optimism.

SECOND DAY'S SESSION

AT THE opening of the second day's session of the Liability Insurance Association meeting the following officers were elected for the coming year:

President, A. Duncan Reid, executive superintendent of the Ocean Accident and Guarantee Corporation; Vice-President, Theo. E. Gatey, manager of the liability department of the Fidelity and Casualty Company; Secretary and Treasurer, Walter E. Hoag, assistant United States manager of the General Accident Assurance Corporation. Executive Committee—Charles H. Franklin, United States manager of the Frankfort Marine Accident and Plate Glass Insurance Company (Chairman); W. F. Moore, President of the New Amsterdam Casualty Company; E. T. Green, President of the Pacific Coast Casualty Company; J. J. Murray, of the

Employers' Liability Assurance Corporation.

Miss Crystal Eastman, Secretary of the Commission on Employers' Liability and Causes of Industrial Accidents of New York State, read a paper presenting the workmen's side of the question of liability for injury to employees. Following Miss Eastman came an address by H. V. Mercer, a member of the Minnesota Commission on Compensation Legislation, who presented the speech of the constitutionality of compensation legislation. He said in part:

Some argument has been produced to the effect that it would be difficult to hold the employer in case he had no fault, but fault is not necessarily the basis of liability in such cases. See *Chicago, R. I. & Pac. Ry. Co. vs. Zernieke*, 183 U. S. 582.

The man who put into operation the dangerous machinery of dangerous employment would be liable by reason of public necessity to be controlled under the elements of the police power for the protection of the general welfare. It has been intimated that this rule would not apply except in the case of quasi-public corporations, but this is not the law. Relations otherwise private may become public under public necessity if the State decides that the public needs protection. See *State vs. Wagener* 77 Minn. 483; *Harbison vs. Knoxville Iron Co.*, 198 U. S. 13.

It is for the Legislature first to determine whether or not this is a proper classification, and if there be reasonable basis for declaring the employment to be dangerous, the courts will follow the judgment of the Legislature, even though their own judgment might not accord with that of the Legislature. See *Lochner vs. N. Y.*, 198 U. S. 45; *Holden vs. Hardy*, 169 U. S. 365.

The police power of the several States was never delegated by the Federal Constitution, nor prohibited by that instrument from reasonable State exercise.

A search of the Federal Constitution fails to reveal any delegation of the police power within the States; neither the Federal nor State Constitutions have prohibited it to the State, except to the extent of requiring equal reasonable and lawful regulations.

There is no appreciable Constitutional difficulty in uniform State legislation for workmen's compensation acts if we treat this subject with a comprehension of the few limitations as distinguished from the fear of the many bugaboos.

The 14th Amendment secures the

liberty of contract between employer and employe, except when limited by the police power; the exercise of the police power rests in the Legislative Department; the courts interfere to uphold the Constitution only to prevent arbitrary power from being exercised under cover of the police power.

This is the great Federal Constitutional question with respect to workmen's compensation acts. Can we say that employer and employe must stand by regulations upon this question? In my opinion yes.

The police power—the public power to protect the interests of humanity for public preservation—is the safety valve here.

The whole question relates to the use of property, as well as personality; it may be machinery or the right to contract—each equally property—but it is, nevertheless, a limitation upon the use. The limitation is based upon the theory that the use is dangerous and the consequences must follow as a legal duty. Judged by the usual rule of following moral obligations with human law, this legal duty is a proper one. Judged by the implied condition that law only recognizes the ownership and use of property by virtue of the social compact, the owner is not an absolute one, except in a private sense, and his rights are always subservient to the necessary public control. When he enters or adopts the social compact he impliedly so agrees.

With an evil as disastrous in totals as was our Civil War, with twenty-three of the greatest foreign countries committed to the change, the several States acting through commissions to form scientific legislation on the question, with a fair, almost urgent, agitation by substantially all persons who understand the evils and insufficiencies of the present system, it would seem to require a very peculiar judge to hold that a law fairly drawn, as a compensation act in dangerous employments, should be held an arbitrary, as distinguished from a discreet, legislative act.

August Belmont, as Chairman of the Department on Compensation for Industrial Accidents and Their Prevention, spoke as follows:

A result of the tabulation of statistics secured by our committee on statistics and cost will have a serious bearing on what is recommended in the way of a bill. The important thing is this: That from the employer's standpoint and from the standpoint of the insurance companies the fundamental principle is to insure, all based upon a law of averages, and the more complete and more general the employments covered by a compensation plan, the more will be reduced the cost of insurance and uniformity of legislation will help in that way.

Personally, I believe it is the one question that transcends all of the rest, and that is the idea of uniformity. Uniformity means, as I stated before, less cost, and as a business man I think that is essential. Nothing is worse. This question that it should be left on the one hand to perhaps the over-conservative employer who, always feeling that the regulation of his business, naturally as you do, that he is better fitted to

manage it than anybody else—that is his general attitude, no matter how progressive he is. On the other hand, the pressure of labor which is seeking its betterment without any necessary reference to the altruistic features. And the third is the sentimentalist who does not consider very much the economic questions at all. So that you recognize in the National Civic Federation an ally that wishes to bring the most practical thought obtainable.

I don't want to detain you any longer, but I wish to say to you that I hope you will in every way assist the Civic Federation in obtaining data and statistics upon which to found a conclusion through which it can co-operate with you and all those interested in bringing about a wise, effective and economical result of this important question.

John Mitchell, former President of the United Mine Workers of America, and a member of the New York Commission on Employers' Liability and Causes of Industrial Accidents, had these things to say to the association:

It is, of course, impossible to pre-

vent all industrial accidents. However sure the precautions, however perfect the arrangement, it is inconceivable that the gigantic industrial movement of the American people should be conducted without some fatalities. The industrial structure is a huge machine, hard running, and with many unguarded parts, and many of the fatalities, many of the deaths in general, are simply and solely the result of conditions beyond human control, and inseparable from the ordinary course of existence. But thousands of easily preventable accidents and fatalities occur each year, and it is from these that the wage-earners strive to secure relief.

In the United States the number of persons killed and injured is not even counted, but Mr. William Hard credits the American Institute of Social Service with the statement that 536,165 workmen are killed or maimed every year in American industry, while Dr. Hoffman has estimated the annual number of industrial accidents at approximately 2,000,000. As a matter of fact, however, the death roll of industry is longer than is evident from official figures. No one can compute, of course, the number annually yielding up their lives or compelled to become a burden upon their friends or relatives, or dependent upon the charity or munificence of society, who have come to their death or disability as a result of disease contracted in their occupations. It is a strange commentary upon our boasted American civilization that in this country twice or three times as many persons per 1,000 employees are killed and injured in the course of their employment as in any other country in the world.

It is not my purpose to disparage the institutions of my own country, because I believe that with all our failings, and with all our sins of omission and commission, we have, in many respects, the best government ever instituted among men; but I cannot blind myself to the fact that in the matter of providing protection for the life and safety of the workman, and in compensating him for injury sustained in the course of his employment, we are lagging far behind the nations of the Old World. It may be said that this is not a parental Government, and that the state should not be called upon to regulate our industrial relations, and, while I agree that they are the best governed who are least governed, I contend, never-

theless, that it is a proper function of the Government to throw around the weakest of its citizens all the safeguards and all the protection possible.

Regrettable and alarming as is the number of accidents attendant upon the peaceful conduct of our industries, yet we might reconcile ourselves to even the conditions as they now exist if it were not possible, by the exercise of reasonable precautions, to reduce the number of industrial accidents. But when we observe the contrasts between the number killed and injured in the industries of other nations with that of our own we are led to the conclusion that if it cost more to kill a workman in America than to protect him—as it does in Europe—the American workman would not be killed, he would be protected, and the number of industrial accidents would be reduced at least one-half. As an illustration of what has been accomplished in foreign countries, and as an evidence of what could be accomplished under proper regulations in the United States, your attention is directed to the conditions prevailing in the mining industry of the following countries:

	Average number men employed each year.....	Total number of men killed.....	Death rate per 1,000 employed
India	79,007	676	0.86
Austria	53,794	928	1.74
Belgium	132,251	1,401	1.06
France	162,917	2,944	1.81
Prussia	397,002	8,460	2.13
Great Britain.....	796,303	10,319	1.29
United States.....	544,756	19,778	3.46

In considering these statistics it is well to remember that the physical conditions of mining in the United States are not more hazardous than the conditions prevailing in the countries of the Old World. Indeed, the natural conditions of American mining are more safe than are the natural conditions in the countries enumerated in this table. Therefore, the disproportionate number of fatal mining accidents in the United States, as against all European nations, must be attributed to inadequate mining regulations. It is, therefore, highly important to the preservation of life and the promotion of health, that the fac-

tory and mining laws of all our States—which at the present time are wholly inadequate—should be greatly extended and should be enforced with the utmost vigor. Manufacturers should be required, under pain of severe penalty, to equip machinery and working places with every practical safety device that it is possible to secure, and the State itself should establish museums of safety devices and industrial hygiene in which should be exhibited drawings or models of all safety appliances that are in use in this and other countries.

As a further means of reducing accidents our iniquitous and antiquated liability laws should be supplanted by an automatic system of compensation to workmen for losses caused by industrial accidents. If the money now spent by employers in defending themselves against personal injury litigation were paid directly to the injured workman, or to the dependents of workmen who have been killed, it would go a long way toward relieving their distress, toward extricating the nation from the disgraceful and humiliating position it now occupies in respect to this question. The United States is now the only industrial nation on earth that maintains the old system of liability based upon negligence. We still live under the common law only slightly modified by statute. This law was evolved more than a century ago and at a time when there was not a mine, mill, factory or railroad of any importance in the United States. The system may have been just then, but it is unjust now. We were wholly an agricultural people 100 years ago. We are now an industrial nation, and our machinery is more complex than that of any other nation on earth. Our men work harder; they live under a severe nervous strain. We are a heterogeneous people. Hundreds of thousands of immigrants come to our shores each year; we and they work and live together, and it is not to be wondered at that we more readily fall victims to industrial accidents and occupational diseases than do the workmen in the more slowgoing homogeneous nations of Europe. Therefore, we even more than they require protection against the dangers of modern industrialism.

As a rule, an injured workman has no remedy at law if his injury were caused by the act of a fellow workman, or if he contributed in any de-

gree, to his own injury. In many instances he has no remedy at law whatever, because it has been held by the courts that the workman in accepting employment assumes all the risk of his work. The result of all this judge-made law has been that the workman is practically helpless, the employer is under heavy expense defending himself in the courts and the courts of the State and nation are burdened beyond their capacity with litigation, that in every other nation is eliminated because of the automatic settlement of such claims.

P. Tecumseh Sherman, former Commissioner of Labor of New York State, made an address, in the course of which he called attention to his belief in the necessity of providing some elective alternative to the obligation which a compensation law would impose upon the employer. He con-

tinued:

A compensation law, I think it is universally admitted, is necessary to apply generally to all employers, but there will be many employers, especially in large industries, who will get up schemes of their own (there are many already), which schemes will provide for the employees injured on a better basis than the compensation imposes on every employer. Such schemes should be permitted by any just compensation law. They should be permitted to replace that law from beginning to end and to replace all other liability whatsoever. I think these schemes present the solution for this problem in large industries and the legal compensation which we hope to have adopted by law in all the Legislatures of all the States of our country presents the solution for the vast body of small employers.

MR. DAWSON'S SPEECH

I AM honored to have been invited to address this company of specialists upon casualty insurance on two subjects to which I have given much attention, without, however, arriving at any final conclusions concerning the wisdom of this or that course, especially in view of the great variance of conditions in one country from those in another.

Your chairman has asked me to speak on two distinct, though correlated subjects, one being the governmental aspect of what is in other countries called social insurance, of which employers' liability or workmen's compensation insurance is a part, and the other the actuarial aspect of the same subject.

In the leading European countries, as is now well known, within the last twenty-five years the laws relating to the liability of employers to employees who are injured in the course of their employment, and to the dependents of employees who are killed in the course of employment, are upon an entirely new basis, viz., not that the employer should, as an individual, pay for his own negligence and not otherwise, but that he should, as a mere means of transferring all the costs of the product into the price to be paid by the consumer, reasonably compensate all who suffer because of accidents occurring in the course of their employment.

It is customary in discussing legislation of this type to state the principle much as I have stated it, but the fact is that this is a very incomplete statement. If the legislation and the conditions which it produces were no more than is included in that statement the very thing upon which the principle is based would surely fail of realization; for if employers did not insure against their risk under these workmen's compensation laws there would be at best a very imperfect distribution of the costs of indus-

trial accidents, so as to form a part of the price of the product. This may be seen very readily by considering what would take place in sub-contracting, where many of the sub-contractors would, we will say, run the risk themselves, and would not take into account this part of the cost in making their bids. It would follow that other contractors who did wish to take it into account could not do so, and that, therefore, the entire cost would come out of the profits of contractors, and would not fall upon the consumer. Moreover, a very large part of the work which is done is in the form of service directly performed for the employer, and most frequently this likewise is when there are few employees. If in such instances the employers do not insure, it may happen, and often will, that the individual employer will be heavily penalized.

The fundamentally correct principle perhaps was that which was first enunciated, so far as proposed legislation is concerned, by Emperor William I of Germany, when, in words which were no doubt supplied by Bis-

marck, he addressed the Reichstag, asking for legislation of this character. It was his proposal, however, that the entire cost of the casualties of a given group of industries which are so related that they could and should bear this cost in common, should in the first instance be borne by those industries through a system of insurance, which, of course, absolutely assures that these costs will enter into the price of the product and be paid by the consumer.

Only in Austria, Hungary, Norway, Holland and Italy has the German principle of compulsory insurance been accepted, and in none of these countries excepting Hungary has it taken a form similar to that which was introduced in Germany.

In all the countries, however, which have passed laws of the workmen's compensation type, it has been found in practice that a very large percentage are covered by insurance, varying in number of employers from 50 per cent to 80 per cent, and in number of employees reaching even as high as 90 per cent. Therefore, in actual practice these workmen's compensation acts have proved in effect to be insurance acts. This has been found to be true, even when the principle has been extended to agricultural laborers and to household servants, as in Great Britain. The employers who do not insure are found in all countries to be in part a considerable number of those who have but one employee, and in part to be a few of the large corporations which by reason of the large number of employees can have a reasonably safe average of loss without transferring their risks to insurance companies.

The various attitudes of European governments toward insurance and insurance companies are exceedingly interesting and instructive. It will be found that they flow more or less directly out of the varying nature of the workmen's compensation laws themselves. They may be recapitulated as follows:

As stated, in Germany, Austria, Hungary, Norway, Italy and Holland there is compulsory insurance. These

countries, however, deal with this subject in widely different manners, as follows:

In Germany all of the employers of a certain group of industries must be insured in a mutual society conducted and managed by themselves. This society has the right to fix rates of premiums for classes of industries, and also for individual industries, to inspect, to enforce regulations, to pay claims and its own expenses, including expenditures for prevention, for care and cure of the injured, etc. During the year the sums required to make these payments are furnished by the state savings bank, interest being charged for the use of the same, and at the end of the year the actual cost is apportioned among the members according to the rates fixed by the society itself, and each member is notified of the amount of his assessment. If there is any failure to pay within the prescribed time the state enforces payment in the same manner as the payment of other taxes.

Actuarially, the German system is also pure assessment. It is so completely an assessment system that there is no attempt even to collect within the year (or for the purposes of the year, although at its close) a sufficient amount not merely to pay the portion of the claims due to the accidents of the year which become payable during the year, but also to set up a sufficient fund out of the receipts for the year to meet the claims payable in future because of the accidents of that year. Instead, only enough is asked for to cover the payments actually made during the previous year, whether due to accidents of that year, or the year before, or any year previous thereto. The corrective that is applied is that in order to meet extraordinary situations, such as the prostration of industry by war or panic, the government insists upon a certain quota being collected for contingency reserve.

In Austria, under a compulsory insurance system, the Government divides the country into seven districts, each with an insurance society or fund governed in part by employers, in part by employees, and in part by the

State. Each of these societies covers all the hazards of that district, and all who are obliged to insure must be insured with the society of the district in which their business is carried on.

Actuarially, the intention in Austria was to collect premiums each year, which should be large enough both to cover the payments of that year in respect of accidents occurring in that year, and also to set up "capitalized values" sufficient to meet all payments that would fall due in future because of accidents occurring in that year. This has been realized in but one of the seven district societies, and the most important of them are impaired to an extent almost, if not quite, equal to half the reserves which they should hold.

In Hungary, where compulsory insurance has but recently been introduced, the system is like that of Austria, in that there are two district societies instead of separate mutual associations for groups of similar industries. But actuarially it is like that of Germany, in that although some reserves are to be accumulated for emergency purposes, the claims payable are each year paid from the proceeds of assessments levied that year, without regard to whether the claims arise from accidents occurring that year or in previous years.

In Norway, where there is also compulsory insurance, introduced in 1894, the system is pure state insurance. Every employer must be insured in the state insurance society, unless specially excepted by the Storting. A few such exceptions have been made, as, for instance, the state railways, which have a system of their own.

As in Austria, the Norwegian Government Insurance Department has aimed at collecting premiums sufficient in amount to pay each year the claims arising out of accidents occurring that year which are payable during the year, and also to set up "capitalized values" for all claims arising out of accidents occurring that year which become payable in the future. The Norwegian department has succeeded much better than the district societies in Austria. There was a small deficiency at one time—about

\$100,000 in amount—to cover which an appropriation was made, but not all of this appropriation proved to be required. At the present time the department is, in fact, strengthening its reserves out of current salvages. This it is doing for the reason that the mortality table used for measuring the lives of the totally disabled has proved unreliable, the experience of the Norwegian department having been that the totally and permanently disabled omitting the first few months of disability, are quite as long-lived as the average of the Norwegian population.

In Italy, where there is also compulsory insurance, there is free choice of companies. Under these circumstances it would hardly do for the Government to require all employers to insure, unless it furnished some institution in which they must be insured if not insured elsewhere, and unless also such institution were ready to accept all employers who might be refused insurance elsewhere. Such an institution has been set up in Italy through the influence of the Government. It is conducted on the mutual plan, and aims at maintaining solvency on a "capitalized values" basis. This company has a large share of the Italian business naturally, but by no means all, and private companies have competed with it successfully.

In Holland there is a peculiar sort of state insurance, viz., the state has set up an insurance institution in which everybody is considered to be insured. This institution adjusts all losses and sets up reserves for all deferred payments and particularly for all annuities, for widows, orphans and the permanently disabled. In case the employer does not insure elsewhere, thus rendering the other insurance company liable to make good all payments which the State Insurance Department may make on

his account, and all reserves which it may set up to cover future payments to be made on his account, the employer must pay to the State Insurance Department the premium which it fixes as the proper one for his establishment. He may, however, pay a premium to any insurance company doing business in Holland which will conform to the requirements of the State, and which will promise to indemnify the State Insurance Department for all payments which it may make and all reserves which it may set up. The private companies, which, notwithstanding these conditions, are successfully competing with the State Insurance Department in Holland, must also make deposits with the department to secure that they will carry out their agreement, upon which deposits it may draw as the money may be required, and they must contribute toward the payment of the expenses of the State Insurance Department as that department may determine.

In Denmark, where they do not have compulsory insurance, the state, as in Holland, adjusts all claims and determines the amount to be paid. It does not permit employers or insurance companies to make these adjustments for themselves. Under these conditions likewise, which were at first very much resented, private insurance companies, both mutual and stock, are thriving.

In Sweden the law does not require the employer to insure; but notwithstanding a state insurance department has been set up and a leading and able casualty man has been put in charge of it. This department is required to accept all risks which offer. In consequence, the private companies have weeded out the poorer risks, and, notwithstanding that the state department is so favored by the Government that all its expenses of what-

ever character and nature, including commissions of 6 per cent on the premiums, are paid by the state out of the proceeds of general taxation, some of the private companies have fairly held their own and made money. There is no provision in Sweden, as in Denmark, for the state department's adjusting all claims, but as its adjustments are of a fixed and almost arbitrary character, well-known throughout the country, it is difficult for the private companies to adjust a claim at a less amount. There is no requirement as in Holland that the private companies deposit with the state department money to assure the payment of claims falling due in the future, but arising out of accidents taking place presently; but the opportunity is given to the companies to purchase such annuities if they choose, and it is very generally availed of by the private stock companies, especially when the injury, though disabling, is such that they do not think it will materially shorten life.

In France there is also a state insurance department, but with free choice of companies, and without employers being obliged to insure. The State Insurance Department has about 1 per cent of the business only. It is not permitted to cover temporary disabilities, which fact has proved a great handicap. It must also accept all who apply, and it would seem from the high rates which it has found necessary to charge that it has been made a target for poor risks which were either refused insurance by the private companies, or heavily penalized in rates.

As in Sweden, the Government also offers to French companies the privilege of purchasing the annuities to cover their liability for pensions to the permanently disabled, or widows, or orphans; and this is often taken advantage of, the rates offered by the government being attractive, and involving a considerable loss.

There is one remarkable thing in France, viz., that while the Government does not compel employers to insure at all, and much less to insure with it in the first instance, it does require all employers to pay a small tax into a government fund which guarantees the payment of benefits to workmen or their dependents in event the employer or the company in which he is insured fails. France also completely releases the employer from liability in event he is insured in a French company regularly licensed to do business.

In Belgium, as in France, a Government department has the right to insure employers against their risk under the workmen's compensation act. This power, however, was given in Belgium to a department which is already a state savings bank, a state life insurance company and a state annuity fund, and is very successful in all of these branches, besides doing much to encourage the building of

workmen's houses to be sold to them on the instalment plan. This department has no workmen's compensation insurance whatever, its manager believing that to engage in a business which would call for close and careful adjustment of workmen's claims would prejudice all the other branches of its business, which are conducted chiefly for the benefit of workingmen and their families.

As in France, if the employer insures in a Belgian company, duly licensed to do business in that country, he is relieved from liability. He may insure in a foreign company if he chooses, but in such case he would continue to be liable in case the company failed to fulfil its obligations.

In Great Britain, as in Denmark, there is no state insurance of employers against their risks under the workmen's compensation act, but as in Sweden and in France the Government does permit private companies if they choose to do so to purchase annuities from a government department, covering payments to be made in the future because of accidents which have occurred presently. The terms upon which such an annuity is sold in Great Britain are that the single premium therefor shall be three-fourths of the premium charged in the Government Annuity Department for

a life annuity when purchased directly. The idea is that, roughly, the totally and permanently disabled will not average by one-fourth to live so long as the healthy persons who come forward to buy annuities. Companies must in any event report reserves computed on this basis, but not as a liability.

In Great Britain, when the workmen's compensation act took effect in 1897, it was fully expected that establishment funds or mutual associations to which both employers and employees contributed, would prove to be the cheapest and most satisfactory method of insuring the risks imposed by the act. This has not proved to be the case, which fact is not attributed so much to any want of economy or dissatisfaction with these establishment funds, either on the part of their members or the employers, as to the fact that whatever difficulties have arisen have become very widely known, while the merits and virtues have not been widely heralded. At the same time, these establishment funds have been used by some employers as a weapon to break down labor unions, so that the sentiment of the trade unions of Great Britain has been adverse, and frequently severely adverse. Moreover, since these establishment funds must, according to the terms of the act, have adequate rates and be maintained solvent at all times, they have not been so attractive to employers. This brings me to one of the most interesting features of workmen's compensation insurance as carried on by mutual societies, which is that employers virtually everywhere resist to the last degree the payment of premiums large enough both to meet the current disbursements in payment of claims and to set up "capitalized values" to cover claims payable in the future because of accidents which have occurred presently.

Undoubtedly, their resistance was one of the reasons why the German system was established on the assessment plan, though, of course, in view of the fact that compulsion really takes the place of reserve, because the purpose of a reserve is to assure the payment, and the compulsion of

itself assures the payment, it is doubtless true that the great imperial Chancellor had in mind the advantages that might accrue to German industries if this burden were imposed upon them gradually, instead of the full burden at one time.

In Austria, as has been seen, the resistance of the employers has been so potent that the mutual district societies are, with one exception—and that by no means one of the most important districts—heavily impaired. In Hungary, which is under the same crown, their influence has been strong enough to cause the system to be modelled on that of Germany, neglecting entirely to set up "capitalized values."

In countries such as Sweden, where there is no requirement that reserves fully equal to the capitalized values be set up, it is found that, while the state department, as a matter of course, and the better of the private stock companies, amply secure their claims by means of adequate reserves, the mutual associations of employers as a class hold much lighter reserves, and quite a number of them of the inter-insurance type hold very small reserves, asserting that they need no reserve, and that all the group of employers is doing is to go without insurance and average up their losses. This plausible but fallacious argument is sufficient to excuse their laxity—to themselves, at least.

The same phenomenon is found in other countries. It would not be fair to say that it is absolutely without exception, because unquestionably some of the voluntary mutual societies are conducted with exemplary prudence, and do maintain as large reserves as in the judgment of the trained actuaries associated with them are absolutely necessary. But even in these the tendency to keep the reserves down to the lowest point believed to be absolutely necessary is marked, and indeed the pressure for greater economy of cost may be said invariably to take this form in mutual associations of employers, which is decidedly dangerous when insurance in them is not compulsory. Laxity on this point, however, is not confined to mutual associations, but in countries

[of Liverpool, England.]

The year of 1910 is rapidly drawing to a close, this being the last quarter of the year.

The amount of money earned by the agents of the Philadelphia Life from now until the end of the year will more than equal the total earnings of agents of other companies for the year 1910.

If you are in a position to contract with the Philadelphia Life at this time, it would be to your interest; or, if you contemplate making a change at the close of the year, let us hear from you now, as perhaps the territory that you would prefer would be closed at that time.

Write Perry To-Day.

where strict standards of adequacy and solvency are not enforced there is a strong disposition on the part of some of the stock companies likewise to hold reserves which may or may not be sufficient. It ought not to be so difficult to determine within reasonable limits what reserves are required under a workmen's compensation act, even though benefits be payable in the form of pensions or annuities, for all that is necessary is to ascertain the fair present value of these pensions and charge the same as a liability. It will be seen, therefore, that, furnished proper tables of mortality and making proper assumptions as to future interest, the amount of reserve required may be computed with great accuracy. The problems are nowhere near so serious, for instance, as are those of setting up ample employers' liability insurance reserves under the existing laws of most of the States of the United States, because in determining what reserves each company shall carry we are dealing chiefly with the uncertain questions involved in litigation, of which the two most important are, first, is the company liable at all, and, second, if so, for what amount? Under workmen's compensation acts both of these questions are supposed to be settled promptly, and the sole thing required in order to fix the amount of the reserve is to ascertain within reasonable limits the duration of the lives of the disabled, and of widows and orphans.

The question arises very naturally as to what attitude ought the government of the United States or the various State governments to take toward insurance under workmen's compensation acts. Doubtless there will be found persons who will argue in favor of one or another of these systems.

Clearly, if the system of Germany or the system of Norway, for instance, were introduced the solution would be very thorough and complete. Among the arguments in favor of doing this will probably be found the proposition that such a system might be nationwide, and that therefore a large saving might be effected by avoiding the creation of an enormous army of agents with commission payments to them of 10 or even 15 per cent of the premiums involving perhaps a charge upon industry of at least \$30,000,000 per annum for commissions alone. Similar arguments will doubtless be advanced for state insurance, though confined to a single State, and, indeed, state insurance, on a compulsory basis at that, was already a fait accompli, so far as mining is concerned, in the State of Colorado before any other State had passed an act which in any way recognized the principle of workmen's compensation.

Notwithstanding this, it is perhaps improbable that in our country a system of state insurance, or even of compulsory mutual insurance will soon be introduced. It is wildly improbable that a system such as in Sweden or Denmark, under which a state insurance department is competing with private companies, will be introduced, and there is no great probability that there will be a widespread call for any system of the state guaranteeing that claims will be met whenever employers or the companies in which they are insured become insolvent, as is the law of France.

It seems, therefore, much more probable, and by many it is believed to be absolutely called for by the genius of our institutions that the workmen's compensation acts in this country should take the form of merely holding the employers liable,

and definitely fixing the limits of their liability, and then permitting them to insure or not, as they please, and in such companies or societies as they please. If this, which is precisely what has been done in New York, which has alone, so far, provided directly for the application of the principle of workmen's compensation, is to be the policy throughout the country, then it is respectfully suggested that it should be accompanied by provisions as follows:

First—Requiring the maintenance of absolute solvency on the part of the stock companies and the voluntary mutual associations of employers which cover this risk. To assure this solvency proper standards should be determined upon and set up, and it seems to me that mutual companies should also be required to deposit from time to time with the state assets sufficient in amount to cover the capitalized values of all payments to fall due in future because of accidents which have already occurred. Stock companies should likewise be held up to the same standards, but provided they maintain themselves amply and abundantly solvent, perhaps deposits may not be necessary.

Second—Provision should be made for definitely encouraging the taking of insurance. This can be done by providing in the law that the employer is entirely relieved of liability if he insures in a company or association licensed to do business in the State, and also that he may insure his employees against accidents of all kinds, including those which do not arise in the course of the employment, as well as those which do so arise, and that in such case he may collect a certain portion of the premiums by deducting the same from the wages of the employees. It would be well also as a further inducement to permit employers to insure employees against both sickness and accident, and possibly also death from any cause, making proper deductions from the wages of the employees in sums not exceeding the excess of the cost of this insurance over the cost and value of insurance of the benefits under the workmen's compensation act.

Under such conditions, definitely encouraging the taking of insurance, it is probable that almost all the employers would protect themselves and thereby the workmen, their dependents, and thus society itself, against disasters which will at times overwhelm employers if made liable under workmen's compensation acts and not so protected by insurance.

Heard and Seen in the West

CHICAGO, Oct. 26.—One of the prominent non-union managers has expressed the belief that hope of reducing fire insurance expense in the West is practically at an end until the States take the subject up. The refusal of the union companies to go ahead with the programme for reducing expenses in the "excepted" cities, unless other cities also are taken up has given rise to considerable ill feeling. The Union attitude was explained last week. The non-union companies, on their side, say that when the question of reducing expenses in the "excepted" cities was taken up consideration was not given to other territory. The arrangement was merely for the six cities in which neither the Union nor any other general body has exercised jurisdiction, and in which expense conditions are the worst. They point out that one non-union manager desired to take up expenses all over union territory, and that it was given out from a union source that no territory other than the "excepted" cities was to be dealt with—this because agents at other points had expressed fear that their incomes were to be cut down.

The non-union people express the belief that union companies have heard from their large city agents in unmistakable tones and want some graceful way of getting out of considering the question. They also remark the fact that since the committees were appointed to visit the "excepted" cities the Union has held its annual meeting and elected as its President one of the most prominent local agents in the entire West.

To some outsiders it appears that the union companies made a mistake in not demanding in the first place that the subject of expense in the entire Western field be taken up. There is little doubt that if they had done so the negotiations would have stopped right then. After all the years the non-union companies have

refused to join the Union it is not likely they would have consented to adopt the union graded scale of commissions throughout the West. As it is, it looks as if the union companies had gone into an arrangement unfavorable to themselves and then sought an excuse for getting out of it by demanding something which had not been agreed to.

* * *

On a recent visit to Chicago E. G. Richards, United States manager of the North British and Mercantile, discussed somewhat the reasons for transferring the Western department headquarters from Chicago to New York. He said that it had come to pass that it was almost impossible to get any considerable meeting of managers or executive officers who could speak with authority. Nearly every question had to be taken up with the Western manager or the manager of some other section before an answer could be given or any agreement entered into. Mr. Richards thinks it detrimental to the best interests of a company to have its business divided to such an extent that the President or manager does not know the conditions in its entire field.

These remarks of Mr. Richards have recalled some events of the past which give force to his argument that managers or general agents of specific territories should be in close enough communication with the home office or United States department, so they will not act contrary to will of their superiors. It is remembered that Western managers from time to time have been overruled by their home offices on important matters, such as the 25 per cent advance of 1902, against which some Western managers voted, and the Missouri rating bill of 1900, which received the approval of Chicago, but afterward was vetoed after arguments by an attorney sent to Missouri by orders from the East. Such instances are

demoralizing and certainly are to be avoided if possible, even at considerable cost.

* * *

The year now drawing to a close has been a trying one in the West, according to a man who has been in harness in this field for many years. There have been other periods which gave companies and managers much more worry, he says, but seldom a year when bad practices and other features of the underwriting situation have been more annoying. It has taken vast pressure to hold the volume of business up to a fairly satisfactory figure and pressure for business almost invariably means some resorting to bad practices. Losses have been heavier than usual several months out of the year. The stock companies are losing more and more business to London Lloyds and other unauthorized concerns. Mutuals admitted to the various States have made inroads on certain classes. The increased credits for coinsurance, the Minnesota standard clear space clause, the Kansas rating law, the agitation of the expense question—these and many another annoying question have kept the Western manager from thinking life one sweet dream.

* * *

Announcement of the coming merger of the Hawkeye and the Des Moines Fire, coming simultaneously with that of the completion of the merger of the National and the Ben Franklin of Pittsburg, and following by only a few months that of the Capital and the Merchants' and Bankers of Des Moines, creates some interest in the West. The Des Moines Fire and the Hawkeye are leaders in Iowa premiums, and their merger places them far ahead of their nearest competitor. Both have a large farm business, and for the last year or two that has not been profitable and appears to be growing worse rather than better. The Hawkeye has entered a number of States outside of Iowa, and the Des Moines a few, but with only \$100,000 capital it was uphill work getting planted where the prestige of being home companies

NOTEWORTHY ADVANCE.

The
**BERKSHIRE LIFE
Insurance Company,**
OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

- Low premium rates.
- Large surrender values.
- Dividends at the end of each policy year.
- Thirty-one days of grace in payment of all premiums after the first year.
- Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.
- Loans for the full cash surrender value.
- Policy payable in one sum or in instalments for terms of years.
- Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.
- Right of the insured to change the beneficiary.
- Liberal re-instatement privileges.
- Every effort has been made to make this new policy the very perfection in a life insurance contract.

was lost. The Hawkeye and Des Moines Fire, with \$200,000 capital and assets of over \$1,500,000, will find itself much more welcome in agencies than either of the constituent companies was, and should be able to build up a general business over a considerable territory, which will relieve it to some extent of its dependence upon Iowa State business.

* * *

Have the promoters of insurance companies found a new way of getting the public to take their stock? If one of them should say that the reports the New York department is sending out nearly every week on promotions on that State are not hurting his business, nobody would believe him. A promoter of considerable experience said the other day that if he ever undertook to organize another company he would adopt the plan of a certain Western life company. According to his version, a few men of means took the stock, paid for it, got the company licensed and going, and now are putting salesmen on the road to sell their holdings at a greatly advanced price over what they paid. These salesmen are not selling promotion stock, for the company is a going concern. The company is not selling stock, and, therefore, is not subject to criticism by an insurance department. There presumably is no law to prevent an individual stockholder from selling his own stock if he sees fit or employing others to do it for him, and apparently no law giving supervision over promotions would reach him, even though his methods might be open to criticism.

* * *

The liberality of the agency contracts of some of the life companies not operating under the New York law is causing comment, especially in view of the address of Superintendent Hotchkiss of New York before the Insurance Commissioners on the value of new business. It is stated

on good authority that one man with quite a reputation as a business getter has recently been given a contract calling for 90 per cent, a bonus and the advance of one very liberal renewal. That is a reminder of the "racing" days of "auld lang syne."

* * *

The poor Life Underwriters' Association of Chicago is still being regaled from month to month with speeches by ministers, lawyers and others outside of the life insurance business, as in the days that are past. Every administration for several years has been besought to cut out these speeches or reduce their number, and substitute some debates on live topics of practical value to the members. Every administration has expressed its intention to do so, and every one has seen its intentions go where good intentions are used for paving blocks.

On one occasion a member of the organization did get an opportunity to tell something worth hearing, and on the strength of it another member the next day wrote a \$7,000 case which he previously regarded as hopeless. Other members have been put on the programme, but have not had a chance to be heard because the invited orators spoke till everybody had gone home or ought to have done so. The Chicago association contains some magnificent material in its membership—successful general agents, expert salesmen, agency actuaries, who from the storehouse of their experience could and would give other members most valuable information and suggestions, if they had a chance. But they have not. Custom decrees that on a certain evening about eight months out of the year the members shall assemble, eat a good dinner, listen to the minutes of the last meeting, transact routine business and listen to one, two or three eloquent addresses on some such eminently practical subject as "Bunker Hill."

LA SALLE.

THE 1910 BROWN BOOK.

The tenth annual edition of the Brown Book of Life Insurance Economics has just been issued. Students and patrons of this work who would comprehend readily the improvement, which has taken place in a single year in practically all departments of the business of life insurance, will be interested in the record of 1909 as set forth in the opening review. Therein is shown, as no mere compilation of official statistics can show, how largely the unsatisfactory conditions which but recently affected the business have been remedied, where not altogether eliminated. Notable among such showings may be mentioned that treating of the great decrease in discontinued business as related to economy in expenditure and the average life tenure of outstanding business; that under the head of "What Is Versus What Was,"

in which is shown in concise tabulation the advantage of quality as against quantity in respect of gains from new business and rates of expenditure, and that dealing with the marked increase in dividend distribution in the last as compared with the first half of the decade. As a statistical history of life insurance covering the experience of the older representative companies for extended periods, the Brown Book appeals to all connected with the business in whatever capacity. Increasing physical infirmities, due to advanced age, compel Benjamin F. Brown, the author, to announce that the tenth annual edition of the Brown Book will in all probability be the last.

Crum & Forster have been appointed general agents for the Union Fire Insurance Company of Buffalo, accepting risks in the home city.

PERSONNEL OF FIRM TO MANAGE PROTECTIVE.

Unusual interest for fire underwriters is to be found in the organization of the firm of Tuttle, Wightman & Dudley, managing underwriters, with offices at Syracuse, N. Y., and 437 Fifth Avenue, New York City.

Robert H. Tuttle has spent his life as a fire underwriter and manager of agents. For fifteen years he has been at the head of the firm of Robert R. Tuttle & Co., of Syracuse, which has represented several large companies in the territory of New York, Pennsylvania and New Jersey, and has been the largest fire agency in New York State outside of the metropolitan district. Mr. Tuttle's agency is comprised of a carefully selected force of a thousand agents, by whom he is respected and held in affection. Under his direction the loss ratio of his agency has averaged less than 30 per cent.

Richard Wightman as an advertising man has specialized with marked success along insurance and financial lines, in which his business has averaged between \$1,000,000 and \$2,000,000 annually. He has recently made large sales, through advertising, of the bonds of the American Real Estate Company of New York, and has also supervised the advertising announcements of the firm of Robert H. Ingersoll & Bro., the watch manufacturers. He is known as a contributor to leading magazines and has written two insurance brochures which have gained wide circulation.

Frederick S. Dudley, the third member of the firm, is President of the American Letter Company, which renders important service in the matter of sales plans to 800 prominent business houses in New York City, and is also head of the firm of Seymour, Dudley & Co., also of New York.

Tuttle, Wightman & Dudley will

serve as managing underwriters to the Protective Fire Insurance Company, of Syracuse, N. Y. The ultimate capital and surplus of the Protective is set at \$5,000,000, and the company's organization under the laws of the State of New York is now fast nearing completion. The Protective now has more than a thousand stockholders—bankers and business men—in forty-five States, and approximately 1,700 agents ready to take the field. Additional agencies, general and local, are being established daily, and the best class of representatives are being secured. The advertising policy of the Protective, under the direction of the managing underwriters, will be national in its scope.

HERE AND THERE.

The New Jersey Supreme Court has decided that the \$14,600,000 reserve fund of the Prudential Insurance Company is subject to taxation by the city of Newark. This decision reverses the decision of the State Board of Taxation, and gives the city over \$600,000 annually. Counsel for the company when asked if an appeal would be taken said that was a matter of course.

* * *

At a meeting of the stockholders of the National Insurance Company and the Ben Franklin Fire Insurance Company at Pittsburg the proposition to merge the two companies was approved and the action of the boards of directors of the companies in this connection ratified according to the legal requirements. The new company will be known as the National-Ben Franklin and will have a capital of \$1,000,000 and over \$3,000,000 assets.

* * *

The Swiss Re-Insurance Company of Zurich, Switzerland, has been admitted to transact business in this State. It is expected that Bayard & Berresford will be the managers.

WISCONSIN PURSUES UNAUTHORIZED INSURANCE.

The Wisconsin Insurance Department has ruled that any solicitation or attempt by unauthorized insurance companies, whether life, fire or casualty, to do business in the State, by mail or otherwise, is unlawful, and may be punished by criminal proceedings. The Wisconsin law, it is said, expressly forbid not only the writing of a policy by an unauthorized company in the State, but also the placing of unauthorized insurance anywhere upon property in the State.

Three years ago legislation in Wisconsin forced over twenty of the leading life insurance companies of the country out of the State. They are now carrying on their business, taking care of renewals and, in some cases, writing what new business they can from offices in Chicago and elsewhere out of Wisconsin. Heretofore it has generally been considered that if a citizen of a State saw fit to do business by mail with an outside or unadmitted concern he could not be interfered with. The ruling of the Wisconsin Department is based upon an opinion of the Attorney General.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Chronicle Paragraphs

AT THE last meeting of the Suburban Fire Insurance Exchange, held on October 18, a committee of five was appointed to look into the question of alleged excess brokerage paid by members on risks located in the area of the Exchange. In this regard many good friends of the Suburban have often remarked that if the original arrangement had been made 15 per cent for brokers and 25 per cent for agents—as against 10 and 20, respectively—the whole scheme of the Exchange would have “gone through with bells” and would have been a stronger organization.

The appointment of the Investigation Committee of five is simply the reflex of this drastic feature of low commission basis upon which the Suburban was founded. It is also the natural result of the competition of members, which, in a measure, was expected to occur at the very birth of the Exchange, and, from current report, has been going on for some time.

With the development of the airship enterprise comes up naturally the question of insurance. Among the companies which have recently commenced to write this class of business is the Boston covering against fire or collision.

The Anglo-American Fire Insurance Company of Toronto, Canada, has appointed C. N. Pinkney & Co., of 43 Cedar Street, as United States agents.

Minnesota business of the Capital of New Hampshire has been reinsured in the Phoenix of Hartford.

The plan as recommended by the Loss Reserve Committee of Liability Underwriters at the recent meeting in the Hotel Plaza, has been approved and referred back to the committee for final tabulation and co-operation with the Insurance Commissioners.

For the Royal Indemnity Company, now in process of organization by persons controlling the Royal Insurance Company of Liverpool, Charles H. Holland, formerly of Australia, has been appointed manager. During the last three years he has been organizing the casualty business of the Royal in Australia and New Zealand.

The rapid growth of the casualty business has induced many fire companies to provide ways and means for writing this class. As to the large foreign offices, represented in this country the following have already arranged to write casualty risks: Commercial Union, London and Lancashire and the Royal. Announcement

is now made that the North British and Mercantile will enter the field through the Railway Passengers' Assurance Company of London, which has been acquired by the former company. With fire companies taking up casualty underwriting as an adjunct, it has been remarked that as yet nothing has been done as to the reverse—casualty companies having fire annexes.

Under the appointments of Joseph Button, of Virginia, President of the National Convention of Insurance Commissioners, Superintendent William H. Hotchkiss, of New York, appears on six important committees out of fifteen—Executive (chairman), Laws and Legislation, Examinations, Fraternal Insurance, Valuation of Securities and Reserves Other Than Life.

On October 25 the first meeting and dinner of the Insurance Society was held at the Underwriters' Club. Archibald G. Thatcher was the speaker on the subject, “Marine Insurance.”

Pettibone & Krouse, of Philadelphia, have been appointed managers for Pennsylvania for the Western and Atlantic Fire Insurance Company of Nashville, Tenn. The company has just received its license for Pennsylvania. It is expected that the capital and surplus of about \$150,000 each will be increased largely.

A special meeting of stockholders of the National Surety Company has been called for November 9 in order to vote on the proposition to increase the capital stock of the company from \$750,000 to \$1,500,000.

Third Vice-President and Auditor James H. Stone, of the Maryland Casualty Company, has been appointed as manager of the fidelity and surety department of the company, with entire charge of all the features of that branch of the company's operations. He is succeeded as auditor by Milton R. Andrews.

Hayden's Annual Encyclopedia of Insurance in the United States for 1909-1910 was issued within the last week. The Encyclopedia, which was established in 1891 by H. R. Hayden, contains the usual invaluable compendium of biographical information in regard to underwriters and condensed descriptions of insurance companies, together with digests of the legal decisions in 1909 affecting all phases of insurance.

When the new Hilliard Building, at John and Dutch Streets, is completed Kelly & Fuller will occupy large and important office space.

The Chronicle Co. (Ltd.)

No. 90 William St.

NEW YORK

ESTABLISHED 1836.

ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS\$13,885,802.88
LIABILITIES 8,766,622.58

SURPLUS\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of\$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1908, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

Mean Reserves, Life, Limited Payment, Endowment.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

- Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
- Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
For these purposes the "select and ultimate" will be most useful.
- Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
- Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
- Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
- Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
- Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
- Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
- Warranted Commissions for New Business.
Surrender Values.
Dividends.

House of Lords on Workmen's Compensation

AN interesting digest of some leading British cases in regard to workmen's compensation appeared in the current issue of the "Australasian Insurance and Banking Record." The cases are enough in point to have a significance here at the present time. The digest is, in the main, as follows:

"During the month of July a number of important cases under the workmen's compensation act came on appeal before the House of Lords and the Court of Appeal. Reports of those dealt with by the House of Lords—two in number—are given in our law columns, the judgments being final. One turned on the question whether an engineer on a steam trawler, who was found drowned, met with accident 'out of and in course of his employment.' The facts are stated in the report. The County Court judge, before whom the case came in the first instance, held in the affirmative, and awarded £300 to the widow. Appeal was made to the Court of Appeal, which set aside the award of the County Court judge. This judgment was then appealed against, and after hearing arguments, the five law lords were divided in opinion, two being in favor of allowing the appeal, and three in favor of dismissing it. It was, therefore, dismissed by a majority. The effect of the judgment is that if a member of a crew chooses to sit on a rail to cool himself in the evening, and falls over and is drowned, the accident is not one rising 'out of and in the course of his employment.' The report is an interesting one.

"The second case also originated in an accident by drowning. A stoker had left his ship in the evening to make some purchases ashore, and after visiting sundry drinking saloons returned to the vessel about midnight. In descending the ladder from the quay to the deck he fell into the water and was drowned. As in the previous case, the County Court judge found for the widow. The Court of Appeal was appealed to, and set aside

the decision of the County Court judge. The case was carried to the House of Lords, and by a majority of three to two the appeal was allowed, and the original judgment, in favor of the widow, was restored. A fine distinction was made by the Lord Chancellor (one of the majority) between 'out of employment' and 'in the course of employment.' The stoker did not go ashore 'in the course of his employment,' but the cause of the accident arose 'out of' the employment. The judges forming the minority could not see, however, that the employment had anything to do with the accident.

"We turn to the cases brought before the Court of Appeal. On July 6, Yates vs. South Kirby, Fetherstone and Hensworth Collieries, Limited, was dealt with. Yates, a collier, while at work, heard a shout for help and proceeded to the spot whence it came. He found that another collier had been knocked down by some falling timber. He picked him up, but the injured man died. The effect on Yates was that he sustained a nervous shock which incapacitated him from his usual work and he applied for compensation. The County Court judge found that there was a genuine incapacity to work, which was due to nervous shock and awarded compensation. The employers appealed, but the Court of Appeal dismissed the appeal, holding that if a workman sustained a nervous shock producing physiological injury which incapacitated him from his ordinary work as a collier it was just as much an accident arising out of and in the course of the employment, and entitling the man to compensation as the loss of muscular power was. Moreover, the Court of Appeal held that Yates was bound to go to help his fellow-workman—a sound dictum.

"On July 8 a drowning case (Gilbert vs. Owners of Steam Trawler 'Nizam') similar in some respects to those settled by the House of Lords, as referred to above, was dealt with.

The second engineer (Gilbert) of the steam trawler, which was lying in dry dock, went home for his dinner. Returning, in trying to get on board the ship, he apparently fell over the side of the jetty into the empty dock and was killed. The County Court judge awarded the widow compensation, holding that the deceased went on shore as a duty to get his dinner, and in the course of his employment. The owners appealed, and the Court of Appeal allowed the appeal. The Master of the Rolls held that it by no means follows that every workman is entitled to the protection of the act whenever an accident happens to him on his way from his home to his employers' place of business. Absolute proof was not required, but there must be evidence which would justify an inference that the accident arose out of and in the course of the employment. But when all that was known was that this man's body was found in the dry dock, that he had gone home to get his dinner and had been seen talking to some one before the accident and nothing more, there was not a particle of evidence to justify the court in saying that the accident arose out of and in the course of his employment.

"On July 11 the Court of Appeal delivered judgment in the case, Hoskins vs. J. Lancaster. The applicant, a collier, was proceeding to his work. When passing through a gate leading to the colliery the gate slammed and caught him against the post, and the iron fastening pierced the muscles of the left arm. The County Court judge awarded him compensation, and the Court of Appeal dismissed the appeal. It was essential to the employment that the appellant should pass through the gate which was the property of his employers, and that the course of his employment included the time spent in passing from the gate to the place where he had to use his pick. The Master of the Rolls added that it must not however, be assumed that because the court came to the present conclusion on this case, the

protection of the act was to be extended to workmen on any part of their employers' property; each case must depend on its own facts as to the reasonable interval of time and space during which the employment lasted.

"On the following day, July 12, two cases were disposed of. In that of *Eke vs. Hart-Dyke*, Eke was ordered to open out certain cesspools for inspection. He afterwards complained of being unwell and died, the cause of his death being ascribed to ptomaine poisoning caused by sewer gas being inhaled or absorbed into his system. The County Court judge found to this effect, and awarded compensation to the widow. The respondent appealed and the court allowed the appeal, holding that a disease is not an accident. The second case (*Nisbet vs. Rayne and Burn*) turned on the question, 'Is murder an accident?' Nisbet, while carrying money for his employers (colliery proprietors) was murdered. The widow applied to the Newcastle-upon-Tyne County Court, and the judge held that the risk by Nisbet in carrying a large sum of money was a risk incidental to his employment, and likely to have been in the contemplation of the parties when Nisbet was engaged, and he accordingly made an award in favor of the applicant for £300. The respondents appealed to the Court of Appeal, and at the conclusion of the arguments, judgment was reserved until July 21, when the appeal was dismissed. Each of the three judges delivered his own judgment. We quote from that by Lord Justice Kennedy as follows:

"The murder of the deceased cashier undoubtedly happened in the course of his employment. I am of opinion that it also arose out of his employment. As cashier he was habitually entrusted with the personal duty of traveling to and fro with large sums of money for the payment of his employer's workmen. Thereby he became specially subjected to the risk which caused his death—the risk of personal violence inflicted upon him in order to rob him of that money. In the case of *Falcom vs. London and Glasgow Engineering and Shipbuilding Company* (3 F., 564) the Lord Justice Clerk said "it was against accidents incidental to the special employment that the benefit of this statute was given." In fact, he so met with his death. What the appellants mainly urge, however, is that, even if the death arose out of and in the course of the employment, it was not within the meaning of the words "injury by accident." I agree that there is no English decision which is exactly in point. * * * But whilst the description of death by murderous violence as an "accident" cannot honestly be said to accord with the common understanding of the word, wherein is implied a negation of wilfulness and intention, I conceive it to be my duty rather to stretch the

meaning of the word from the narrower to the wider sense of which it is inherently and etymologically capable, that is, "any unforeseen and untoward event producing personal harm," than to exclude from the operation of this section a class of injury which it is quite unreasonable to suppose that the Legislature did not intend to include within it. If the word be so interpreted the expression "an injury by accident arising out of and in the course of employment" includes the death of the deceased in the present case, and also the similar case suggested in the course of the argument—the hurt or death of a gamekeeper through violence used to him by poachers whilst he is discharging the duties of his service."

"On July 22, a case (*Skates vs. Jones & Company*) was decided which raised a question of some importance as to the meaning of Section 4 of the workmen's compensation act, 1906—namely, whether if a person who is carrying on a trade or business contracts for the execution of a work which is not within the scope of his trade or business, but is necessary for the carrying on of the trade or business—e. g., where a shopkeeper contracts for the rebuilding of his business premises—he thereby becomes a principal within the meaning of the section. The facts are stated in the judgment of Lord Justice Kennedy as follows:

"Two shopkeepers named Jones and the keeper of a billiard saloon named Acocks were minded to join together in running a skating rink at Tonypandy, in Wales. They bought an existing iron structure at Kingston-upon-Thames, and made some contract, the exact terms of which did not appear, with one Thomas Howarth to remove the structure from Kingston to Tonypandy. Skates, the applicant, was employed by and worked for Howarth on this job and met with an accident. He claimed against the trio who speculated in the skating rink venture."

"The learned County Court judge held that the claim was not one which could be maintained under Section 4 of the workmen's compensation act, 1906, and dismissed the application. Skates appealed, but the court dismissed the appeal. The Master of the Rolls in the course of his judgment remarked that Section 4 is one of the most difficult sections of the act, and that different views had been held in Scotland and Ireland, if not also in England.

"All the cases to which we have referred are interesting from more points of view than one. They demanded the exercise of a high degree of intellectuality and of logical power. As the judgments will form precedents, unless overthrown in the case of those delivered by the Court of Appeal by the House of Lords, or unless nullified by fresh legislation, an improbable event, they call for careful study by underwriters.

LEGISLATIVE SERVICES.

The "Journal of Commerce" in its issue of yesterday published the following paragraph: "The insurance brokers have secured \$6,000 in subscriptions from the insurance companies toward the \$7,500 bill of Richards & Heald for legal services in connection with proposed legislation regarding Lloyds, London, etc., this year."

VIRGINIA CONSPIRACY CASE.

In a lengthy decision on demurrer to the warrants in the insurance conspiracy case, Judge T. J. Barham, in the Corporation Court, at Newport News, Va., held that there is common law in Virginia to cover criminal conspiracy, and that if proven, the offense alleged by the Commonwealth is indictable under the common law. This decision practically settles the case, so far as the trial court is concerned, though the hearing on the warrants, as amended by order of the court, will be held this week.

In their argument on the demurrer to the warrants, counsel for defense averred that there was no law under which this case could be tried, and that the common law, even if it existed, which they claimed did not, could not cover this case, because the State Legislature had enacted a law driving the insurance combination out of Virginia, and then repealed that law, thereby inviting the Southeastern Underwriters' Association and similar organizations back into Virginia.

Twenty-four officers and members of the executive and Virginia committees of the Southeastern Underwriters' Association were arrested at Hot Springs last May on warrants sworn out by Commonwealth's Attorney Charles C. Berkeley, charging them with conspiring to raise the fire insurance rates in Newport News. The arrests followed the issuing of a "pink slip" raising the insurance rates in Newport News ten per cent. after the Council had increased the tax on the fire insurance companies.

Non-Board Underwriters in the West

AT THE first general meeting of the Western Insurance Bureau since its organization by non-board underwriters last Summer it was voted unanimously in Chicago yesterday to apply their regulations of the bureau to the business in a large number of the Western States, operations having been restricted so far to Illinois and Indiana. The bureau went on record as willing to co-operate in reducing expenses in the excepted cities as soon as an equitable agreement can be reached with the Western Union. E. G. Halle, of the Germania, President of the bureau, was in the chair.

The new States to be entered are Michigan, Wisconsin, Minnesota, North and South Dakota and Missouri.

The regulations as regards commissions and other expenses are to apply after January 1, but the large cities of Detroit, Milwaukee, Minneapolis,

St. Paul, St. Louis and Kansas City are excepted.

The greatest difficulty will probably be encountered in Wisconsin, where the competition of the local companies has led to high commissions, but Presidents Jones of the Milwaukee Mechanics, Woelliger of the Concordia and Patten of the Northwestern National assured the meeting that the field could be put on the new basis with little friction.

A large delegation of Iowa companies was present yesterday and assured the bureau of their co-operation outside the State, as the Iowa Anti-Compact law makes their membership in that State doubtful.

W. E. Haines, Secretary of the Ohio Farmers, and C. D. Mullen, Secretary of the Columbia of Omaha, explained the conditions in their States, and the desirability of entering Ohio was referred to the Executive Committee for negotiations with the Ohio

companies. That committee was also authorized to formulate a rule to make possible the collection of the earned premium of not-taken policies. Where the jurisdiction of a member does not cover the entire field of the bureau the officers of the company were invited to become members for the other States.

The following resolution was adopted on the scope of the expense-reduction campaign, indicating the disposition of the bureau companies to restrict their co-operation for the present to the excepted cities:

"Resolved, That the Western Insurance Bureau stands ready to take up the question of the reduction of the excessive commissions and other expenses in the so-called excepted cities as soon as the necessary co-operation can be secured on a basis of fairness and equity to all interests, so as to make the success of such a movement reasonably assured."

A Minor's Right to Premiums

AN INTERESTING case in regard to the non-recovery of life insurance premiums by a minor, Hamm vs. Prudential Ins. Co., 122 N. Y. Supp. 35, is cited in the "Insurance Green Bag" as follows:

A policy was issued to a minor at age 17. After having paid a number of premiums, his guardian ad litem brought a suit to rescind the contract and recover the moneys paid. The company defended under Section 55 of the Insurance Law (N. Y.) as amended by Chapter 437 of the laws of 1902, which is in substance as follows:

That where a minor of the age of 15 years and upward having effected insurance, shall not, by reason only of such minority, be deemed incompetent to contract for such insurance

or for the surrender thereof or give a valid discharge for any benefit accruing thereunder.

In the City Court of Hudson there was judgment for the minor, which the County Court reversed and the Supreme Court, Appellate Division, Third Department, N. Y., affirmed, saying in part:

"The plaintiff's contention is that at common law the infant had the right to make the contract, which was not void, but only voidable at his election, and that this statute is simply a declaration of the common-law rule. It is difficult, however, to see for what purpose the statute was passed, if that be its interpretation. No insurance company would insure an infant, with the right of the infant at any time to cancel the policy and to recover back the premiums paid. There

are many reasons why it may be well for the infant, and those dependent upon the infant, that it should be possible to effect insurance upon his life. It may reasonably be supposed that the Legislature had in mind the desirability of an infant's having the power to make a valid contract, one that should be binding upon him as to the obligations imposed in order to secure to him the benefits which it could give.

"A further question is raised—that his policy is not merely a policy of insurance, but what is called an endowment policy, or one under the terms of which a certain sum was to be repaid to the assured at a period of twenty years, and that the policy was in the nature of an investment,

Insurance Institutes in the Antipodes

By George Beattie

Address Delivered at Inaugural Meeting of the Insurance Institute of Auckland.

VERY general have been the expressions of regret at the inability of our esteemed president (Mr. James Buttle) to accord honor to the institute by delivering an inaugural address, but absence from the Dominion at the particular juncture, irrespective of other inordinate demands upon available time, would obviously preclude him an option. The words of commendation and encouragement to which he gave utterance whilst presiding over the largely attended preliminary meeting—bearing upon the necessity for an Insurance Institute, its place in the domain of underwriting, and its likely effect viewed from an educational standpoint—are not likely to be forgotten, and steps will no doubt be taken at an early date to give heed to all of his suggestions. The promise, too, of a substantial donation towards the establishment of a Prize Essay Fund, or other of a similar character, is further earnest of the wish of the president that the institute should commence its super-

structure of work upon a true and stable foundation.

The request of the executive that I would, under the circumstances, endeavor to undertake the duty of writing an address is an undoubted mark of favor, and one which is highly appreciated. An intimation of compliance therewith was accompanied by an announcement that the few weeks time which intervenes until the holding of the first meeting, as prescribed by rule, would not permit of the compilation of matter, so sifted as to be worthy of the occasion. Members must, therefore, satisfied with what, at best, cannot be described as other than a hurried survey of the world of Insurance Institutes, a glance at what they are doing, and what yet remains for accomplishment, together with a few general observations upon the absence of, and pressing need for, educational facilities for such as contemplate entering upon an insurance career.

In offering these more or less disconnected notes, one does so with a feeling akin to trepidation, recognizing that there are included in the list of foundation members of the institute, some who, by long years of experience, are in possession of a maturity of judgment which should make them far more competent to speak the "words of advice" so essential to the welfare of the underwriter in embryo. Members will kindly ponder over the "words" and blot out of recollection their channel of conveyance.

It should not be incumbent upon me to outline, in detail, the purpose of an organization such as has been formed in our midst, seeing that there are very many valuable records extant of the doings of the Federated Insurance Institutes of Great Britain and Ireland, which body was founded nearly fifteen years ago. These records embrace, along with other features, papers upon almost every conceivable phase of underwriting in all of its departments, as also upon topics closely allied thereto, and provide the student with a library, the value of which cannot be too highly appraised. Affiliation with the federation is open to any Insurance Institute, whether established abroad, or in any part of the British Empire, on terms and conditions as provided by the constitution and by-laws. The operations of the federation embrace: (a) the publication of a journal; (b) the holding of examinations; (under certain conditions the federation will adjudicate upon papers set for examination by any affiliated institute); (c) the

offering of prizes for essays or research in any subject bearing on insurance business; (d) the formation of a library of insurance works; (e) the encouragement and support of the Insurance Clerks Orphanage; (f) the general welfare of the insurance profession.

To attain proficiency in any calling there must be study, with a special emphasis in its application to highly technical subjects, and to permit of study there must be an acquirement of books. A studious life cannot make us unhappy. Has not Seneca, the great philosopher, put it that "of all others a studious life is the least tiresome. It makes us easy to ourselves and to others, and gains us both friends and reputation."

Our public libraries, even when possessed of standard technical works, are not always reasonably accessible to students, and an Insurance Institute is, therefore, looked to to provide the requisite food for the young mind. No amount of experience will be compensation for a mind which has been imperfectly grounded in theory and sound principle, and no youth enter-

ing upon an insurance career, should be deprived of the opportunity for securing a complete theoretical knowledge. It cannot be obtained, as yet, in our schools or university colleges, though the day is not far distant when an insurance course will be open to choice as, for instance, that of, say medicine. The graduate in medicine hopes that his research, or an application, rather of results therefrom, may result in a saving of life. The actuary on the other hand, by preparation of mortality tables based upon careful selection of lives over stipulated periods, and by a close scrutiny of attendant elements, aims at making the best possible provision for those dependent upon the life when it has passed over. Surely one is the complement of the other, but how very different the provision for study. All honor to the English Institute of Actuaries and to the Scottish Faculty for the erudition exhibited in treatises of admitted academic worth, by many of their fellows and associates, despite lack of recognition by Government educational authorities.

A quarter of a century ago the domain of underwriting was comparatively limited by contrast with the actualities of to-day. At that time it was represented by a few clearly defined branches, whereas the present day discloses a sphere so comprehensive, that no hazard or eventuality is held to be incapable of indemnification. Indeed, the ramifications of present day commerce and the varying responsibilities incidental thereto, are such that the man of prudence will carry no risk upon life or property which may properly be made the subject matter of an insurance contract. To an excess of keenness in competition, frequently leading to, and resulting in, unfair treatment of employes, may, in part, be attributed much of our industrial legislation of to-day, and which has thrown open so many additional avenues for employment of underwriting skill.

This may be viewed as satisfactory by the insurance speculator, or company promoter, but new hazards, at least, should not be undertaken in the

absence of knowledge as to essential fundamentals. Where—it may be asked—is this knowledge, and when found how is it to be assimilated by the youth deprived of opportunities for class study? He has a hazy idea that there are some technical works, with titles displayed in large gilt letters, in the office bookcase and which he considers will, no doubt, have to be read by him as a duty, when the passing of the time brings the anticipated advancement. On whose shoulders should be cast the blame for so circumscribed an outlook?

In Great Britain the disabilities have been recognized and some steps taken by way of remedy. The London School of Economics (University of London) initiated in 1903 a course of lectures, and the London Chamber of Commerce has also given its countenance to the subject. The trend of present opinion, however, would seem to lie towards the foundation of Chairs of Commerce—with insurance as a component part—at some of the modern universities such a consummation can hardly be looked upon as an unqualified solution of the position, having regard to the enormous and ever increasing importance of insurance indemnity in one or other of its forms to the community.

To the United States of America attention is drawn consequent upon an advanced outlook in respect to matters of scientific interest. No State is without its college or university and no curricula would be viewed as complete which lacked provision for imparting instruction upon what is of vital import to the people. So, in regard to the topic of insurance, the vastness of the field, the immensity and the variety of interests, have all combined to produce a knowledge and skill which cannot be excelled by any other country. The establishment of Chairs of Insurance at some of their universities has long been under review, and the outcome of preliminary action in the direction of lecture ships will be carefully scrutinized in many quarters. In the classification and rating of fire hazards, for instance, our American cousins

have evolved—the term is used with reservation—a system of schedule rating and loading which omits no element from the count. At any rate, if not entitled to the credit of initiating this schedule system, they have, assuredly, improved and advanced it to a degree until it approximates closely to the definition of an exact science. It has been adopted in Australasia, and time has not served to disclose inherent weakness. On the contrary, its solid foundation—based upon justice and reason—calls for a more extended outlook, ensures greater discrimination and more exactness in detail, all of which factors must assist to remove the reproach of a good risk having to pay for a bad.

The aggregate number of institutes in Great Britain and Ireland (a majority of which are members of the Federation) is now assuming considerable proportion, all the provincial centers being represented. In other lands using the English language as the medium of speech, institutes are becoming the rule rather than the exception. They are to be found in the United States of America, Canada, South Africa, the Commonwealth of Australia, to which more extended reference will follow, and in our own Dominion of New Zealand. Limits of time preclude an enlargement upon what has been attained in all of these parts, but the pioneers of the movement have earned at least the gratitude of all who have profited by their labors. Their maxim was, obviously, "Nil sine labori."

In the Commonwealth of Australia vitality of a highly commendable order has been displayed in connection with the Insurance Institutes of Melbourne, Sydney and Brisbane. With a large membership in each case and a keen interest evinced on the part of leading underwriters, the results adduced will not occasion surprise. An examination of syllabi will disclose lectures upon subjects covering a wide range of thought, and some of the presidential addresses, embodying as they do, the experience of a life's work of men eminent in the profession, are worthy of reproduction in

E. J. SLOAN, GUY E. BEARDSLEY.

pamphlet form for purposes of regular reference. An arrangement of a federal nature has been entered into by the three institutes, whereby each undertakes to have prepared a paper on such branch of the business as may be allotted to it. The paper is read simultaneously in each institute, and the criticisms of members are recorded and forwarded to the author for review and reply at a subsequent meeting. Such arrangement ensures a greater exhibition of zeal because of the wider circle of men and matter from which to make choice. The prize essay competitions, also, are open to all members, and entrants therein are stimulated by knowledge that success, if lacking the accompaniment of a formal certificate—to which so much importance is attached in other spheres—will imply a "hall mark," the value of which may not easily be assessed. The unsuccessful competitor has at least benefited by the application of mind to study of subject, which application surely is synonymous with success, though it may not be immediately apparent.

Classes have been formed under competent instructors, all of which channels for the dissemination of knowledge evidence an appreciation—if tardy—of the responsibilities of elders towards those who may decide to choose insurance as a calling.

In the Dominion of New Zealand, the institute founded in Wellington in 1899, and from which many excellent and scholarly papers have emanated, would appear to have gone into recess. The hope may be expressed that it will emerge therefrom and continue the educational work which it has set itself out to do. Success is not to be measured solely by attend-

ance at meetings, though a large assemblage of eager expectant faces has undoubted potential value. With institutes at Auckland and Wellington and the early formation of similar organizations in Dunedin and Christchurch, a scheme, which would ensure a wider range of syllabus and provide inter-arrangements for examinations, would be easy of preparation, thereby securing for the profession of underwriter in this fair land a status and importance far in excess of that at present accorded to it.

It is a matter for comment that the Government, which is itself a competitor—rightly or wrongly—in the life, fire and accident fields has not recognized the obligation to make provision in its educational seminaries for obtaining tuition in insurance subjects.

A feature of Insurance Institutes in general is the opportunity which they afford for social intercourse amongst members. No better medium can be suggested for bringing together the various sections of the profession and for the production of a healthy spirit of camaraderie. The fire and marine men have nothing to lose, and probably much to gain, by coming into contact with their life confreres, and all three will receive inspiration from the modern compendium, the accident underwriter. Each has his problems to face, but there is, nevertheless, a community of interest which seeks reasonable outlet for interchange of view. The element for good in the frequent meeting of senior and junior also is worthy of note. Ability is indicated, character is evidenced, and parts hitherto latent are brought to light, these in themselves affording ample return for time and energy given to the support of an institute.

Plate Glass Rate War

BY THE resignation of the Metropolitan Casualty Company from the Plate Glass Insurance Association, the companies writing this class of insurance are again facing a rate war. In view of the notice of the Metropolitan of its withdrawal, which takes effect in thirty days, the association has voted to suspend all regulations as to rates and commissions. In accordance with this action, E. M. Gridley, secretary of the association, has sent the following announcement to brokers in regard to the course of the association:

"The Plate Glass Underwriters' Association at a meeting held October 27, 1910, voted to suspend all rules and regulations as to quotation of rates, etc., on plate glass insurance business, but the association continues its organization and will for the present continue its activities to the compilation of statistics. The companies forming this association are Aetna Indemnity Company,

Metropolitan Casualty Insurance Company, Fidelity & Casualty Company, New Amsterdam Casualty Company, Lloyds Plate Glass Insurance Company, New Jersey Fidelity & Plate Glass Insurance Company, Maryland Casualty Company, New York Plate Glass Insurance Company."

The brokers whom underwriters consider largely responsible for the present condition of affairs will now be forced to obtain sixteen bids on every renewal or new application won from every company writing this class of business in order to protect themselves.

No institution employing men in positions of financial trust need look beyond the advertising columns of THE CHRONICLE for FIDELITY INSURANCE.

Two Mutuals in Question

THE condition of the Liberty Mutual Fire Insurance Company and the Lincoln Mutual Fire Insurance Company has been brought to the attention of the State Attorney General by Commissioner McCulloch, of the Pennsylvania Insurance Department, because of lack of funds to pay loss claims.

Frank R. Shattuck, attorney for the companies, declared that he had requested the Attorney General to grant a stay of ten days before appointing receivers, to enable the officers of the companies to raise enough money to close up all past transactions.

Both the companies have their offices in the Drexel building. Chetwood & Co., Inc., are their agents. Colonel James B. Coryell, commander of the Fourth Brigade, National Guard of Pennsylvania, is president; Eli B. Hallowell, vice-president, and Henry Farnum, secretary and treasurer of the two institutions. Mr. Hallowell is treasurer of the Chetwood firm.

George B. Chetwood, president of the agency, declared that the two companies expected to raise the needed funds this week.

"The amount needed is not great, not more than \$20,000," he said. "There have been some judgments against us, and the matter was taken up by the Attorney General."

Colonel Coryell also declared that the sum needed is about \$20,000.

The companies began business about three years ago and placed risks chiefly in Philadelphia, Camden, New York and Chicago.

In explanation of the affairs of the two companies Attorney Shattuck said that two weeks ago it became evident that to write more insurance business would be improper.

"Notices were therefore sent to all policyholders, warning them of the situation and advising them to place their insurance elsewhere," said Mr. Shattuck. "At the same time they were told that new business would not be accepted. It is doubtful if receivers can do any good."

under other than the corporate titles of such companies, and that there have also been in use combination policies written by two or more companies. The question of the legality of this practice had the consideration of the department early in the year, and it was determined that the issuance of such contracts was not contemplated by the insurance law. The department, nevertheless, believed in the desirability of combination policies, and therefore proposed the amendment to Section 121 herein referred to, which expressly provides for such policies. The amendment does not, however, recognize such a contract as is described in the first paragraph of this letter.

"We must ask that you advise us whether or not your company is issuing in this State an underwriters' policy of the character under discussion. If so, as above stated, the company is violating the provisions of the insurance law. If the company is issuing such a policy in other States, presumably it is doing so under the laws of such other States, and we, therefore, have no desire to review such act on its part.

"We would request a detailed statement from you in reference to the subject matter of this letter, and would ask that at the time of making such statement you file with the department a copy of the underwriters' policy herein referred to."

Underwriters' Policies

SUPT. HOTCHKISS, of the New York State Insurance Department, has sent a letter to fire insurance companies which issue underwriters' policies that are not their combined contract of two or more companies, in the course of which he said:

"It is reported to the department that your company is issuing a so-called 'Underwriters' Policy' under the above title; that the policy in question is in no sense of the word a combination policy, but a contract of your company, and your company alone, issued under the title indicated. The department must hold that the issuance of such a contract in this State by your company would consti-

tute a violation of the provisions of the insurance law.

"Under an amendment to Section 121 of the insurance law, passed this year, two or more insurance corporations authorized to transact business in this State may issue a combination standard form of policy, using a distinctive title therefor which shall appear at the heading of the policy. This amendment to the law does not, however, recognize an underwriters' policy written by a single corporation under a distinctive title differing from the corporate title of the company.

"We appreciate that for years past it has been the practice throughout the United States for single companies to issue underwriters' policies

HOTEL AMPERSAND

DISMISSAL AFFIRMED

The judgment of dismissal recently granted by Justice Whitney in *Eaton vs. Orient Insurance Company*, has been affirmed by the Appellate Division unanimously without opinion. This was one of the libel cases instituted by Eaton and based upon the answer of the insurance company. A motion for judgment was made in this case before Justice Whitney by the defendant, which motion was granted, and the order granting the motion is now affirmed. The total amount involved in these litigations was very large.

The Department Store Hazard

IN the "Quarterly" of the National Fire Protection Association, Winthrop P. Tenney discusses the department store hazard, in the course of which he said:

"Department stores are a product of our modern civilized life. They are a national growth of the individual store presided over by an ambitious, energetic owner. Just when the ordinary store takes on the added dignity, in such it be, of a department store is hard to say. Perhaps four or five diversified departments under one head of general management may constitute a department store, in a strict acceptance of the word, but it has been customary to designate as department stores only those immense structures housing fifty or more departments, containing large numbers of clerks, accountants, buyers, salesmen and other employes, and it is only with such stores that this paper deals.

"It has been said that anything may be found in the large city department store, and this is in the main true. The goods exposed for sale in all department stores are not necessarily of the same grade. A department store is essentially a store for the multitude; a 'popular' store catering to the tastes and purses of all the people, and each differs in the quality and grade of goods sold. Any one familiar with the stores in his city can classify them as high, medium and low-grade stores, according to the quality of goods sold and the class of trade supplied. The character of the department store has little influence on the fire risk, provided the management is first-class.

"General retailing, with its attendant processes, is the principal work done in department stores. To give some idea of the usual departments and stock exposed for sale the following list may be given as fairly representative of all department stores, though each store often has its specialty; general dry goods and small wares, furniture and house furnishings of all kinds, pianos, pictures and framing, ladies' and gentlemen's clothing and wearing apparel (including tailoring and altering), boots and shoes, millinery, crockery, glass and china ware, toys, books, kitchen ware, leather goods, harnesses, groceries, curtains, carpets, rugs and awnings, music, phonographs, medicine and toilet articles, printing, wall paper, etc. Outside the regular work of selling is the mechanical work—repairing, carpentering and electrical work made necessary by the constant deterioration and change in the various departments.

"It should be remembered that much of the stock displayed is of a highly inflammable nature and as variable in character as celluloid comb

stock, ammunition or calcium carbide are from crockery, china and glassware. The stock is nearly all susceptible to water damage and breakage, or may be ruined by smoke. So that with the large values subject to even an inextensive fire, and the accompanying destruction from smoke or water, the resulting loss may be very large.

Department Store Construction.

"The construction of department stores is of the utmost importance, more so perhaps than that in any other form of building. The older and smaller stores are usually located in inferior buildings, often renovated for the purpose. Walls are brick, with joist floors and ceilings plaster sheathed throughout. They often have concealed spaces at roofs, and sometimes pitched roofs. New department stores in congested districts are now usually of fire resistive type. They have brick or stone facing on iron frame, with reinforced concrete or terra cotta floors and roofs. This is the only suitable type of building for department store occupancy. The large amounts of inflammable stock which these stores contain, and their location, render them sources of potential danger often underestimated by the layman.

"In the older stores practically all the floor openings, such as light wells, stairways and passenger elevator, form open shafts extending from basement to roof, which are extremely dangerous in case of fire. Store managers have always pleaded that the enclosing of these openings would seriously interfere with the commercial success of the store. They believe that a light open store is a necessary feature, enabling the customers to obtain a wide view of the stock exposed for sale, and they strenuously object to enclosing these vertical openings. Without entering into a discussion on this point, we wish to say that since the advent of wired glass there is no excuse for allowing such dangerous openings to exist. Polished wired glass gives a very satisfactory method of enclosure without greatly obstructing the view which they claim is so important. Modern stores are now using this material for light shafts, passenger elevator and stairways, and in time we may see this serious vertical hazard entirely disappear. Freight elevators are almost always located in brick wells with fire doors at each floor. Bundle chutes, which are circular metal chutes connecting each floor with packing and shipping rooms, should have heavy self-closing doors at each opening.

"Curtain boards, so-called, have a certain importance in risks equipped with automatic sprinklers when the

value at stake does not warrant a large outlay for wired glass, or when the enclosure of a main staircase may be felt to be a detriment to the business. These drops may be made ornamental, and should project below ceiling around the openings at least eighteen inches. They serve to bank up the heat from any fire on a floor, thus causing the sprinklers to operate more quickly, and prevent others on the floors above from opening unnecessarily. They are of no positive value in preventing the spread of a fire, however.

"The floor area of the department store is another factor which may greatly influence the spread of fire. Experience suggests the necessity of making the undivided area not greater than ten thousand square feet, and where large floor areas are necessary fire walls should be introduced with fire doors at the openings. Here again we clash with the ideas of department store managers, who prefer to have a large unobstructed area over which a customer's eyes may roam at will. Where a department store has an established trade with regular patronage, limiting the area is not so important to them. New stores, however, may need this additional help. The fact that department stores are successfully run in London, with fire walls cutting them off at frequent intervals, seems to disprove the theory so common in America that an unobstructed area is necessary.

"Curtain boards might also be used in these cases, and offer some slight protection by preventing the heat from passing quickly throughout the floor area and causing an abnormal number of sprinkler heads to open in a comparatively small fire. They are of no certain value, however.

Exposure Hazard.

"Many department stores have succumbed to exposure fires. This is not surprising, when we consider that they are usually located in highly congested districts. While it is difficult, if not impossible, to protect such a building from a sweeping conflagra-

OFFICE:

46 CEDAR STREET, CITY.

tion, it is perfectly practicable to protect it against an incipient or moderate conflagration.

"This can be done in the usual manner of protecting the heavily exposed windows by shutters and the others by wired glass or open sprinklers.

Their Fire Record.

"The National Fire Protection Association has records of 269 department store fires which have been classified as follows:

Fires.	No. of P.C. of Fires.	Fires.
Occurring in waste or rubbish of various kinds...	70	26
Unknown	65	24
Defective electric wiring, many from temporary wiring in show windows	49	18
Employe fires, due to carelessness of store employes, mechanics, etc., with a few due to carelessness of shoppers.....	31	12
Exposure	17	6
Kitchens connected with restaurant or candy kitchen	11	4
Boiler or power plants...	10	4
Stoves, defective flues or chimneys	9	3
Spontaneous combustion in furniture rooms.....	5	1
Incendiary	1	..
K. O. lamp exploded.....	1	..
	269	

Fire Protection.

"In considering fire protection of the department stores we must keep in mind their construction and location, as well as the public service character of these buildings. These points are of more than ordinary importance, and especially noticeable if contrasted with the average factory. The owner of the average factory may choose many equally good sites for building. His factory may be completely isolated, or have only light exposure. He need not give special consideration to fire resistive construction, but may erect a factory which best suits his business and the capital that he wishes to invest.

While he is responsible for the safety of his employes, their comparatively small number renders their satisfactory protection something to which he need give little thought.

"Not so with department stores. The department store is a public service store. It tries every way to attract visitors, hoping to make them customers. In inviting and seeking to attract these people to enter the store, it accepts a great moral responsibility for their safety, and is bound to take every precaution against fire or any extraordinary accident which will in the smallest degree give rise to a loss of public confidence. It is appalling to think what might occur in any department store thronged with thousands of holiday shoppers should a fire become the cause of panic among the customers.

"The large department stores usually realize the value of modern fire protective practices, and stand ready to adopt any device or method which will insure less liability from fire, or which will afford any additional means of fire protection.

"First and foremost, no matter what the construction of the department store, there should be an installation of automatic sprinklers well supplied by water works, batteries of pressure tanks and steam pumps. Alarm devices should be installed in the sprinkler systems operating electric gongs in suitable places, and in addition a complete thermostat system under daily test, giving alarm at a central station when there is any undue rise of temperature in any part of the building. A further system of supervisory connections on sprinkler gate valves, and other sprinkler system devices, insures their being kept in proper order, and gives an alarm at a central station if such is not the case.

"Watchmen are employed, and make hourly rounds through the property, ringing in regular stations on a clock or at a central station.

"The installation of standpipes, roof hydrants and monitor nozzles, hand chemicals and fire pails, completes the rather complex and, it may seem, cumbersome protection inside

the building.

"The outside protection usually consists of wired glass windows, shutters and open sprinklers co-operating with the public fire department. A fire brigade, composed of employes, well drilled and familiar with the various fire fighting devices, trained to extinguish small fires, allay the fears of customers, prevent unnecessary loss by water from sprinklers and co-operate with the public firemen, is a necessary and valuable aid to fire protection.

"The value of well built, self-supporting brick walls, blank and parapet wherever possible, must not be overlooked as fire protective features against both incipient or sweeping conflagration, as well as their effect in limiting fires in stores themselves. There is nothing equal to or of more value than a good brick wall of this description, and it should be given full prominence in any scheme of fire protection in city buildings.

HERE AND THERE.

John B. Murphy, who was connected with the "brokers branch" of the National Surety Company has resigned as resident vice-president of that company.

* * *

John H. Sell, formerly president of the Peoples' Surety, has become connected with the contract bond department of the National Surety.

* * *

B. P. Sullivan, Louisiana Fire Marshal, is making a thorough canvass of the city of New Orleans in order to correct defective flues, dangerous electrical installations and other hazards, upon which responsibility is placed for unusually heavy fire losses in that city.

* * *

The Equitable Life Assurance Society has opened spacious offices in the Flat Iron Building, at Broadway and Twenty-third street, in charge of Herman Lcroy. THE CHRONICLE is glad to see Mr. Leroy back in the life insurance business, and to be connected again with one of the large companies.

EDWARD P. MADDEN, Treas.

416-18-20 Walnut St., : PHILADELPHIA, PA.

OBITUARY.

Dr. Edward Holman Hamill.

Dr. Edward Holman Hamill, consulting medical director of the Prudential Insurance Company, died last Saturday at his home in Chatham, N. J., as the result of a nervous breakdown. He was born in 1845, and after graduating from the College of Physicians and Surgeons in New York he joined the Prudential. He was at one time president of the Life Insurance Medical Directors of America.

Daniel L. Van Antwerp.

Daniel L. Van Antwerp, a prominent insurance man of Troy, N. Y., was struck by an automobile last week and died at the hospital Tuesday morning. His condition was considered critical from the first and he never regained consciousness. Mr. Van Antwerp began his insurance career with Nehr & Carpenter nearly thirty years ago and continued with that firm and its successors until his death.

KNIGHTS OF ST. JOHN
PUT IN LIQUIDATION.

On application of Superintendent of Insurance Hotchkiss an order has been entered in the Special Term of the Supreme Court for New York County, directing him to liquidate the Knights of St. John and Malta, a fraternal beneficiary society. On the examination made last June it developed that, owing to internal dissensions and inadequate rates, as well as the issue of old-age benefit certificates for which a sufficient premium was not charged, the further continuance in business of this society would be unwise, unless other funds could be supplied to meet present obligations. After hearings following the presentation of such reports, efforts were made to compose the internal differences in the society and to raise the required moneys. Such efforts failed, with the result that, with the consent of the executive officers of the society, the order above mentioned was granted.

At the time of the examination this society had 2,153 members and \$2,319,000 of insurance in force. There was then available for loss claimants about \$13,000, and matured obligations, both for death and for old-age claimants, aggregating \$58,000. The society is composed of forty-seven subordinate lodges and has been transacting business in five States, chiefly New York and Pennsylvania and in the Dominion of Canada.

Edwards P. Ward, assistant to the Chief of the Liquidation Bureau of the Insurance Department, has been appointed Special Deputy Superintendent to liquidate this society.

NORDISCHE OF MOSCOW.

The Nordische Insurance Company of Russia will enter various States in this country, making its deposit of \$200,000 in Connecticut. For the purpose of transacting a re-insurance business only, the company has appointed Fester, Douglas & Folsom, of No. 1 Liberty street, as managers for the United States. This will be the second foreign company to come into the management of this firm. The home office statement shows a cash capital of \$1,200,000, with total assets of nearly \$6,000,000. A rather extraordinary feat, which the company is about accomplishing is the construction of a \$3,000,000 building at Moscow out of current cash funds and without disposing of any invested security. Neither directly or indirectly has the Nordische transacted any business in this country.

PACIFIC COAST FIRE.

President Langlois of the Pacific Coast Fire Insurance Company, of Vancouver, B. C., is now in this city. The Pacific Coast Fire will enter the United States, making its deposit in New York early next year. It will be under the management of President Amonson of the People's National Fire Insurance Company.

RECOVERY OF PREMIUMS.

(Continued from Page 3.)

as well as in the nature of an insurance policy. But these different forms of policies were commonly known at the time of the passage of this act, and were presumably within the knowledge of the Legislature. The right to make investments in connection with insurance is a more important right to a boy than it is to an older man. With the presumed knowledge of the different forms of insurance commonly in use, the failure of the Legislature to specify what insurance might lawfully be taken by an infant would seem to indicate that the infant was permitted under the statute to take any of those forms that are commonly used and make a valid contract in reference thereto. We are of opinion, therefore, that the County Judge was right, and that the judgment must be affirmed, with costs."

MUSEUM OF SAFETY.

In view of the new attitude in New York State in regard to workmen's compensation, both employers and liability underwriters are taking a new interest in the Museum of Safety and Sanitation at the United Engineering building. It is the purpose of the museum to keep on exhibition all the latest approved devices for preventing accidents, saving life or conserving health.

The Travelers Insurance Company purposes awarding a medal for the best safety appliance exhibited at the museum during the coming year, and a medal of the "Scientific American" will go to the corporation or individual saving the most lives during the same period. The museum will be formally re-opened on November 30, when there will be an elaborate program of speeches.

BOWLING IN BOSTON.

The Life Insurance Bowling League of Boston comprises teams from the Boston Mutual, Columbian National, John Hancock, Prudential, Mutual Life and New England offices, and gets under way this (Wednesday) evening with matches between the Mutual Life and Columbian National, Prudential and Boston Mutual and John Hancock Mutual and New England Mutual teams. There are to be eighteen matches this season, the last one taking place March 15, 1911.

EASTERN UNION COMMITTEE.

The Special Committee of the Eastern Union, at its meeting at Hartford discussed the question of how best to reduce expenses in the excepted territory. The general sentiment seemed to be that brokerages should be reduced and a stated overriding commission paid to agents. No action was taken, however, and it was decided to meet again in the near future.

Mrs Dickinson Sues

SUIT has been brought by Mrs. Grace G. Dickinson, widow of Charles C. Dickinson, against the Casualty Company of America to recover \$63,525. under an accident insurance policy issued to her husband who was, up to last December, president of the Carnegie Trust Company, and who died at St. Luke's Hospital on May 24. It is alleged that Dickinson's death was the result of the accidental inhalation of noxious gases, blown from a retort, while Dickinson and his brother were in Scranton, Pa., watching an experiment by a Dr. Lange, who claimed to have discovered a chemical process for transmuting base metals into silver.

The case, if it ever comes to trial, is expected to develop some sensational testimony. The company claims that its physicians declared the death of Dickinson was not the result of an accident. It has now twenty days within which to file its answer.

The policy carried was originally for \$50,000, was for death and dismemberment only and carried a premium of \$157.50. It was taken out in December, 1907, and under its terms the insured was entitled to an addition of 10 per cent of the principal sum upon each annual renewal for five years. In addition Dickinson's policy carried an indorsement dating back the interest of 5 per cent. of the principal sum to January 12, 1907; making an additional \$2,500. This would make the total accumulations under the policy \$12,500, or a total of \$62,500. Those interested in the suit were puzzled yesterday in trying to figure out how the claim had reached \$63,525.

There are nine companies interested in the case from a reinsurance standpoint. They are the Georgia Life, New Amsterdam Casualty, Great Eastern Casualty, United States Casualty, United Surety of Baltimore, American Fidelity of Montpelier, Vt.,

Columbian National Life of Boston, Union National Casualty of Philadelphia, and the South German Reinsurance Company, Ltd. Each assumed one-tenth of the risk.

The facts so far as they are known relating to the death of Dickinson, are that on May 16, Dickinson and his brother, Stanton Dickinson, went to Scranton, on the invitation of V. W. F. Hedgepeth, to witness Dr. Lange's experiment. The room suddenly became filled with black smoke, it is alleged, and the deceased was so affected that he became very ill. He returned to New York and the following day was taken to the hospital, where he died after a week's illness of pneumonia and kidney disease. The

exciting cause of death, it is alleged, was the accidental inhalation of the poisonous gases, and the coroner's physician, Otto H. Schultze, so issued the certificate.

On June 20, Coroners Winterbottom and Feinberg held an inquest in the Criminal Courts building, where Dr. Schultze testified that he had performed an autopsy on the body in his private capacity and as a result had come to the conclusion that death was not the result of inhalation of poisonous gases. Despite this fact, and following the charge of Coroner Feinberg, the jury rendered a verdict of accidental death.

Charles C. Dickinson was one of the organizers of the Colonial Trust Company, and after severing his connection with that concern he promoted and was made the first president of the Carnegie Trust Company. He resigned last December.

CHECK FOR HOTCHKISS.

Superintendent Hotchkiss, of the New York State Insurance Department, received a setback from Justice Scott, of the New York Supreme Court in the suit, in which he, as liquidator of the Union Life Insurance Company, is defendant. The suit was brought by Reba Lawson to recover \$2,000 on a policy issued upon the life of William E. Prall. The superintendent is not to be permitted to examine her before trial to prove his contentions that she has no legal interest in the policy.

Miss Lawson alleges that she was employed by Prall as private secretary at a salary of \$2,400 a year and that on June 13, 1904, Prall owed her more than \$2,000 and assigned the policy to her. Mr. Hotchkiss said that "such information as we have been able to obtain concerning the business of the deceased and the plaintiff's relations to him indicate that his financial circumstances were such that he had no use for a private secretary." Mr. Hotchkiss said that it was desired to examine the plaintiff in order to verify reports that had been received.

In his decision reversing an order for the examination, Justice Scott says that the Superintendent of Insurance evidently wants to find out in advance of the trial what the plaintiff's evidence will be, and if possible break it down in advance. Notwithstanding the recent relaxation of the rules which formerly made examinations before trial practically impossible to obtain, there are still limits upon such examinations.

"We appreciate the necessity of keeping such examinations within proper limits to prevent injustice," the court said.

SOUTH GERMAN DEPOSIT.

It is announced that the South German Reinsurance Company will make a deposit in New York for the purpose of doing a reinsurance business, and that it intends to enter a number of the other more important States.

No New York employer need look beyond the advertising columns of THE CHRONICLE for LIABILITY INSURANCE.

What is Doing in the West

CHICAGO, Nov. 2.—Fire insurance agents writing automobile floaters in Chicago are still endeavoring to get a special schedule of rates adopted for this city. They find that if the companies insist upon the rates they promulgated more of the business will go to London Lloyds. Already the Lloyds have a very strong hold on the business in Chicago, and since rates were advanced they have been getting more

of it. A committee has recently been in New York interviewing the managers and endeavoring to get their consent to have a schedule, prepared by A. T. Graham, Secretary of the Chicago local association, made effective in this city.

* * *

Last week the offices of the North British and Mercantile in Chicago were dismantled and the records and much of the furniture shipped to New York. Fifteen or twenty of the office employees left Chicago on Sunday so as to report to the New York office on Monday morning. The company will still have a Chicago office, as Manager W. J. Littlejohn will continue in office until next June and accommodations are necessary for the Cook County department and the special agents.

* * *

Field men in Ohio report that the effects are beginning to be seen of the law passed last Spring requiring assured to pay 5 per cent tax on premiums paid to unauthorized fire insurance concerns. While the law became effective only on July 1, and assured will not be obliged to make their returns until next year, some property owners are reported to have dropped their unauthorized insurance already, and it is expected others will do so. On the other hand, it is reported that some assured are laboring under the delusion that the stock companies secured the passage of the law, and they have become bitter against the stock companies accordingly. The law originated in the Insurance Department, which saw that the State was being deprived of a large amount that it would receive in taxes if all insurance were placed in authorized companies. It is true that a number of stock company representatives used their influence to secure its passage.

* * *

At the meeting of the Illinois Association of Local Fire Insurance Agents at Decatur on November 1, O. B. Ryon, attorney of the Illinois Fire Insurance Commission will outline, at least in part, what the commission will recommend in the way of legislation in Illinois. It is understood that two subjects on which laws will be asked are unauthorized insurance and promotions of insurance companies. On the last named there is considerable sentiment in favor of a measure similar to that in New York, under which the Insurance Department is examining promotions and reporting on them.

The question of unauthorized insurance in Illinois is serious, and becoming more serious every year. The Illinois law does not recognize Lloyds, so nobody can represent them as authorized concerns, nor is any-

body in violation of law in doing business for them. The result is that most of the leading fire offices in Chicago are correspondents of some group of London Lloyds, writing for them a large automobile and other floater business, and still more under the head of surplus lines. In addition to these Lloyds of standing, there are some local ones of no standing, which the Insurance Department cannot close up under the present law. Time and again efforts have been made to get a law enacted which will put all these unincorporated concerns under the supervision of the Insurance Department, but large business interests in Chicago have killed these attempts, fearing such a law would interfere with the operation of interinsurance concerns and London Lloyds. It is hoped that if the local agents down the State, whose business is being constantly lost to them through these concerns, can be waked up on the subject, they will bring sufficient pressure upon members of the Legislature from their districts and accomplish something.

* * *

The Actuarial Society of America met in Cincinnati on Thursday and Friday of last week as the guest of the Union Central Life. This was the society's first meeting in the West, and it was so successful that it is likely meetings will be held in the West at somewhat frequent intervals hereafter. Fifty-five members were on hand. In addition to several purely technical papers, there were two or three of a very practical character. Among these one which attracted much attention was a discussion of mortality among women by Arthur Hunter, Actuary of the New York Life, based on an experience of more than 80,000 lives.

* * *

There is some interest in Chicago over the managership of the Royal Indemnity Company here. It is understood that whoever is appointed will have his headquarters in connection with the Royal Insurance Company, whose city forces of brokers and agents, together with those of the Queen, it is expected to utilize in getting business. Law Brothers, the Western managers of the Royal, have received a number of applications for the position and have been in consultation with one or more men who were not applicants. It is regarded as a responsible position and one desirable for a man who is competent to fill it.

* * *

Prominent representatives of liability companies in Ohio express the opinion that within another year that State will have a workmen's compensation law. The attitude of employers and employes in Ohio appears to be the same as that in Illinois, from entirely different causes. In Ohio the employers have been deprived of their common law defenses by the Norris

law, and they are anxious for a compensation law as relief from the burden they are now bearing, while the laboring men are said to show considerable opposition to compensation, believing that they can recover more by suit under the present law than they would be granted under compensation.

When the Illinois commission was investigating this question, the employers appeared to favor compensation, largely on humanitarian grounds, while the opposition came from organized labor in Chicago because it wanted a law abrogating present defenses instead of a compensation measure.

The change in the general agency of the United Surety caused considerable comment in the city last week. John McGillen, who resigned as general agent, had been with the company ever since George G. Brown was ousted from the home office man-

agement about a year after the company started. He stood so well with the Penniman administration that he was elected a director of the company. This year, however, its exclusion from several States and the general hammering it was getting previous to its reorganization, made it impossible to keep the volume of business to that of last year. Mr. McGillen has not assigned any cause for his leaving the company's service, but it is believed his relations to the present administration have not been as cordial as with the former one.

The return to the surety field of Pere L. Wickes, Jr., by his taking the general agency of the United Surety, caused surprise. He was for many years with the Fidelity and Deposit, but retired from the surety business four years ago and since then has been general agent of the Pennsylvania Casualty. His friends supposed he had quit the surety field for good.

LA SALLE.

Cotton Bill Guarantees

ON Tuesday the extension of time for arranging a satisfactory guarantee of American cotton bills of lading, which was granted by Sir Edward H. Holden, chairman of the Foreign Bankers' Committee, went into effect, the ultimatum resolution of July 20 having expired on Monday. The new cotton bill of lading recently put in statute form in Texas at a special session of the Legislature, also took effect on Tuesday.

With it, and a strict observance of the rules regulating the issuance of validation certificates by the railroads, local bankers believe, ample safeguards against fraud have been put into operation to satisfy the British and Continental bankers; and they do not expect any difficulties in the near future. In the financial district the whole cotton bill controversy is now regarded as a dead issue.

Since the departure of Sir Edward the bill of lading committee of the

American Bankers' Association has not held any meetings. On Tuesday the committee sent letters to the Southern railroad lines calling their attention to certain details pertaining to the issuance of validation certificates. It was pointed out that some agents have been pinning certificates to bills of lading instead of pasting the documents together, as prescribed in the regulations. Attention was also called to the fact that some agents were omitting to stamp the date on each of the blanks, and the request made that all employees be instructed to strictly observe all the rules.

The committee has not conferred with representatives of the surety companies, and appears to manifest little interest in the plans for the organization of a guaranty company.

According to the new Texas law railroad agents receiving goods and issuing bills of lading must make affidavits that they have executed, signed

and issued the bills in question. The act makes the railroads responsible for the cotton for which bills of lading are issued.

As regards the opposition of the Liverpool Cotton Association to the proposed guarantee plan, the London "Economist" says:

"We understand on good authority that a settlement of this question through surety companies guaranteeing the bills of lading, as foreshadowed by some of our contemporaries, is uncertain, if not improbable. No agreement can be formulated without the consent of the Liverpool Cotton Association, and this body is at present almost unanimously opposed to anything which might advance the price of cotton in Lancashire. The whole question will have to be rediscussed, and we doubt if the matter can be arranged until a committee representing both English and American bankers and cotton importers comes together. Meanwhile serious risks continue, though they have been reduced by the precautionary instructions issued by Southern railroads. The Texas law as regards the liability of railroads is satisfactory, and the other States ought to legislate in the same spirit; for the present condition of things is highly prejudicial to American credit, and also to cotton planters."

A unanimous agreement has been reached between the Council of European Banks and the Liverpool and European Cotton Associations with regard to the form of guarantee required to protect European interests from any loss arising through fraudulent bills of lading accompanying cotton bills from the United States.

GERMANIA LIFE CHANGE.

The Germania Life Insurance Company announces that Dr. Joseph Kucher has retired from the position of resident physician of the company, and that in his place Dr. Wyeth E. Ray, formerly medical director of the Travelers' Insurance Company of Hartford, has been appointed as medical director.

Negro Fraternal Order Loses License

BY ORDER of the Virginia Insurance Department the license of the Grand United Order of True Reformers to do business in that State as a fraternal beneficiary association has been suspended. The order is the largest negro fraternal order in business. J. N. Brenaman, Deputy Commissioner of the Virginia Department, says in his order that the action was taken because of "the gross mismanagement, if not criminal negligence, of its present and former management in safeguarding its funds."

The suspension of the license of the order followed an application in the Chancery Court at Richmond for a receiver for the Savings Bank of True Reformers, an allied concern, which is said to owe the fraternal association \$335,100 and to hold \$50,000 of checks drawn by the association to pay insurance claims, which checks the bank is unable to pay.

For some time complaints have been coming to the bureau of insurance as to the non-payment of insurance claims by the True Reformers. A year ago officials of the department warned the officers of the

allied institutions that unless they dropped the bank it would sooner or later involve the entire enterprise. But nothing was done. However, last spring, prompted by many complaints, the department held an examination and found that the bank was holding up checks for more than \$50,000, drawn by the treasurer of the order and accepted by the same man as cashier of the bank, but placed in a drawer. The checks had been charged off on the books of the order, but the bank could not pay the money. Acting on demands made by the insurance people, a piece of property was sold, and these claims liquidated. But apparently no lesson was learned from this experience, for the same condition is now found to exist.

The Insurance Department has been constantly hampered because of its lack of authority to examine the bank. The order would show that it had a certain amount to its credit with the bank, but the actuaries of the department were unable to discover whether or not the bank could put up the amount if required.

When the State Bank Examining Department was organized during the past summer, under the new law, the Insurance Department requested that an examination be made of the True Reformers Bank, which the new department, with many calls on its time, was unable to do at first. However, the examination was begun on October 18, and it was made a joint one. Actuary Isaac Davenport being

sent to look into the books of the order, while Examiner C. C. Barksdale was having a glance at the bank. By the next day the condition of affairs had become so evident to the examiners that the insurance department ordered the officials of the True Reformers not to put any more money belonging to the order on deposit with the bank. Since that day all moneys belonging to the order have been placed in another bank. As the examination progressed it was found that while the books are not in such condition as to permit an accurate statement to be made, the amount due the order is approximately \$335,100, of which \$274,000 is in deposits and \$61,100 in money borrowed by the bank from the order.

The True Reformers was organized about thirty years ago. Its home office, bank and printing office are located in Richmond. It has a membership of about 60,000, nearly half of whom are in Virginia and the others scattered over the Atlantic States. There are about 2,500 subordinate lodges in the Southern and Middle States.

The savings bank was chartered in 1888. Stock was subscribed to by individual members of the order. The charter of the bank provides that its board of directors shall be the board of directors of the True Reformers. Stock was sold on the condition that at the death of the stockholder it should revert to the bank, and no provision was made for its reissuance.

THE LEADING FIRE COMPANY
OF THE WORLD

Toledo Life Organized

AT A meeting of the stockholders of the Toledo Life Insurance Company last week practically all of the nine hundred stockholders were represented. Officials of the company reported that over three-fourths of the stock had been disposed of, and that the balance would undoubtedly be distributed in the near future. From all indications the company will be in a position to begin selling life insurance in about four or five weeks.

President Wynant in a letter says: "As indicated to you in previous correspondence, this is the first company which has ever been organized with a limit of \$250 worth of stock or a \$500 investment. Every dollar of stock subscribed is paid for on the same basis, and we have no promotion or watered stock. We have now nearly 1,100 applications for stock on file in our office, and will have about 1,200 stockholders. Considering that we are raising only \$200,000 on \$100,000 of capital, I think this a wonderful achievement. It costs more money

to thoroughly distribute stock in the manner which we have distributed this stock, and yet our percentage of expense is less than most new companies, and our average cost per stockholder is less than any company which has ever been organized. We have collected 25 per cent with subscriptions and will issue the call for the balance of the stock the first of next week."

Officers were elected as follows:

President—Wilbur Wynant. Vice-Presidents—William Standart, E. P. Breckenridge, John J. Barber, C. P. Harley. Secretary—R. S. Walker. Treasurer—C. M. Feilbach. Attorney—Charles K. Friedman. Medical Director—R. S. Walker. Actuary—James W. Glover.

No institution employing men in positions of financial trust need look beyond the advertising columns of THE CHRONICLE for FIDELITY INSURANCE.

In New England

BOSTON, Nov. 2.—What a fine start has been made by the Massachusetts F. & M. appears from a report made by the Massachusetts Insurance Department, following an examination of the company on June 30 last, and showing at that date admitted assets of \$1,003,148, whereof \$500,000 is paid up capital and \$473,249 net surplus. Policyholders surplus, therefore, aggregated \$973,249. The concluding words of the report are as follows:

"A casual scanning of the books, showing business transacted subsequent to the date of this examination, discloses a surprising growth. The company is to be congratulated upon having at so small expense and so expeditiously laid the foundation of what bids fair to be a magnificent business."

Garage Dangers.

The alarming frequency of fires in garages and the necessity of doing something to keep garages out of the thickly settled districts of Boston is the burden of a recent communication of Fire Commissioner Daly to the Mayor, noting also that since January 1 there have been eighteen fires in Boston garages, one of which necessitated the sounding of five alarms and another four.

"Dead Ones" Still On Deck.

With the terrible experience of a sister city (Chelsea) but a few miles away, as a warning of the conflagration danger from shingle roofs, the Salem (Mass.) Common Council had the sorry nerve to kill a proposed ordinance prohibiting the covering of roofs of buildings anywhere within the city limits with anything but incombustible material. And the fact

that even the eloquence of Councilman Franklin S. Wentworth (also secretary of the National Fire Protection Association and sponsor of the measure) was of no avail, adds to the density of the gloom. Apparently, some of those "dead ones" whom Hawthorne so feelingly pictures in his preface to "The Scarlet Letter," are still lingering in the purlieus of ye ancient Witch Town.

New England Brevities.

At last week's meeting of the Boston Life Underwriters' convention these gentlemen were elected to membership: Active, Harley Lackey, Equitable Life; associate, James T. Maynard, National Life; Hugh Campbell and Harry G. Dixon, John Hancock, and Nathaniel Hartwell, Massachusetts Mutual.

* * *

The ticket reported for election at the forthcoming annual meeting of the Boston Board of Fire Underwriters is as follows: For president, Charles B. Wheelock; vice-president, Harrie H. Whitney; secretary, F. Elliot Cabot; treasurer, A. Lewis; executive committee, Alfred M. Bullard, Francis H. Stevens, Arthur N. Bruerton, Walter B. Henderson, Edward F. Woods.

* * *

Recent New England special agency appointments: P. A. Cosgrove, for the Connecticut, Western Massachusetts and Vermont field of the Fidelity-Phenix; E. A. Miller, for the Law, Union & Rock, in this territory generally.

* * *

P. J. Hannon, who got \$20 out of the Boston Elevated on a fake trolley accident claim, will have four months

to think it over in the House of Correction. The numerous artists who indulge in this interesting specialty will please take notice.

* * *

Admission to Massachusetts is sought by the Union & Fenix Espanol of Madrid, which intends to do fire insurance business in the Bay State, also by the Swiss Reinsurance Company of Zurich. The latter is to be represented in Massachusetts by J. W. Grover.

* * *

W. Perdue Johnson, after five years' service with the Security of New Haven, becomes general agent at the home office, with the direction of the company's Southern, Southwestern and Pacific Coast departments as his particular province.

* * *

The New England agents of the Metropolitan Life have been holding inspiring meetings of late at Portland, Me., and Providence, R. I., with notabilities from the home office and distinguished guests from the respective sections to add eclat and interest to the gatherings.

Chronicle Paragraphs

WITH the advent of the old Yorkshire Insurance Company, Limited, of York, England, into this country for surplus business, through the long established firm of Frank & DuBois, No. 45 William street, there enters one of the strongest of the foreign surplus line writing offices. The company was organized in 1824 and has accumulated assets of more than \$12,000,000. It has not heretofore transacted any business in the United States, and Frank & DuBois have exclusive authority over the entire field. They have, therefore, facilities for handling large lines on high-grade risks at regular tariff rates whether sprinkled or not. Besides this goes the power to adjust and pay all losses and accept service of legal process for the Yorkshire. For the protection of American policyholders funds have been deposited with New York banks.

A prominent brokerage firm, controlling many big accounts, and, at the same time, being also representatives for several companies (both admitted and for surplus business) reports a serious loss of renewals for the month of October, on one of its particularly large and desirable risks, to the surplus line companies and for which the concern are agents. The worst of it is that, in this case, the brokers place the entire line, and by reason of new companies entering New York State and the greatly increased facilities of several of the larger offices, something like \$100,000 was thus lost to the firm's surplus line writings for the month.

Following the above, within the past few months there has been noted a gradual decrease in the published list of risks seeking "outside" insurance—in other words, non-admitted companies. Many brokers have observed this fact and remarked thereon. They have realized it from reduced insurable values, as well as the expanded lines of companies. Certain it is that the successful work of the high pressure service has had a broadening effect upon the commitments of regularly authorized companies. This was intimated in the columns of THE CHRONICLE a short time ago.

Cecil P. Stewart, connected with the firm of Henry Stewart & Son, average adjusters, has joined with Fred S. James & Company as head of the marine department in the New York office.

During the past thirty-five years industrial life insurance has made tremendous strides. As long ago as that it was not known. Now there are over twenty million policies of this

class of insurance in force.

Statistics show that about a million and a half of people die every year in this country and about four and a half million are sick enough to need careful treatment. Over \$250,000,000 of property value is destroyed by fire yearly.

A new company, to be called the Unity Assurance Company of London, is being formed to conduct the business of fire, personal accident, live stock and marine insurance. Its authorized capital will be £1,000,000.

The organization of a new life insurance company, with proposed capital of \$1,000,000, is expected to be soon under way by R. M. Messick, now acting as sales manager for the Union Accident Company of Muskogee, Okla.

Manager Carl Schreiner, of the Munich Reinsurance Company, Bavaria, arrived here on Saturday, October 29.

On October 28 the local Board of Burglary Insurance Underwriters met, practically for the purpose of reorganization. In June, 1909, the board was formed and this meeting was more in the line of taking preliminary steps for keeping alive the old association. As a rule, since over a year ago, the meetings have not been of very frequent occurrence.

For new business the Factory Insurance Association announces an increase of commission to brokers of from five per cent. to ten. There will be no change as to renewals.

The Provident Savings Life Assurance Society of New York announces the appointment of James F. O'Donnell as manager at its Syracuse, N. Y., agency. Mr. O'Donnell represented the Prudential for about fourteen years. Miss C. E. O'Donnell has accepted the position of cashier for the Provident Savings at Syracuse.

George Stauch has been appointed supervisor of the Hartford Life for Northern Illinois, with headquarters at Chicago, and James C. Wilson becomes general agent at St. Louis, with Manager Edwin H. Fulton, who has represented the Hartford Life in that city for the past six years.

Chubb & Son have been appointed marine underwriters for the Alliance Assurance Company, Limited, of London, which has decided to write marine business on this side of the water and will make the required deposit.

Mutual Life Decides to Limit Business

BY FORMAL resolution the Board of Trustees of the Mutual Life Insurance Company of New York has decided to limit voluntarily the amount of insurance to be written annually, despite the recent amendment of that section of the Armstrong laws of this State, which imposed such a limitation. The resolution of the Mutual Life Trustees declares that "the limitation of new business substantially as heretofore provided by law is eminently in the interest of the company's policyholders, and should be perpetuated," and that "the limit for paid-for business, until the recent change in the law, has been \$150,000,000 in any one year, which limit should be substantially preserved, although for technical reasons a margin should be added of about \$20,000,000 for policies issued, but not yet paid for at the close of each year." The resolution then provides that "the issue of policies be hereafter so restricted that the amount of new policies paid for in any calendar year, together with the policies issued but not yet paid for at the close of the year, shall not exceed \$170,000,000."

In the announcement to policyholders President Charles A. Peabody says the purpose of the resolution is to "limit the expenses of conducting the business so that the policyholders may get the largest possible dividends on their policies."

Urged by Mr. McClintock.

The adoption of this resolution followed a communication from Emory McClintock, Vice-President and Actuary of the company, to President Peabody, in which he reviewed the history of the problem involved and submitted his reasons for urging the action now taken.

The position taken by Vice-President McClintock in relation to the volume of business is, as is fully set forth in his communication, entirely consistent with his well-known attitude for a quarter of a century. It is undoubtedly true, likewise, that under

the existing method of computing reserves, which has been adopted and used by the leading companies for many years, and which is required by the laws of most of the States, a large increase in new business is obtained only at a temporary reduction of returns to old policyholders, which may also be more or less permanent in case there is a constant and large increase of new business. The excellent effect of a let-up in this respect, as well as a reduction in the cost of new business, has been seen in the enhanced dividends paid by many companies since the Armstrong laws, limiting the cost of new business and also instituting thorough publicity both as to first-year expenses and as to dividends earned and paid, went into effect. The dividends paid by the Mutual Life Insurance Company have been especially favorably affected, the same being increased, on the average, upward of 200 per cent. and it is gratifying to learn that by holding down the volume of new business within reasonable limits, it is the opinion of the great actuary, who is the Vice-President of that company, that this dividend scale can be maintained and may even be increased.

The other side of it is of course, that necessity for this artificial restriction upon the volume of new business would, as is hinted by Mr. McClintock in his communication, be obviated wholly or in large part if a proper method of valuation were employed, such as those which have been repeatedly mentioned with favor by himself and by the Vice-President and Actuary of the largest American company, and has also been embodied in the minimum reserve standards of the States of New York and New Jersey, respectively, through the Armstrong laws. Whenever, in other words, the leading companies, while maintaining their conservatism, so far as holding ample fluctuations and other reserves is concerned, so that they are in more than an equally

strong position because such reserves would not be charged as a liability, find it possible to abandon the net level premium reserve fetich, these conditions will pass away, and, in fact, it is only now, so far as the managers of the companies are, perforce or by choice, recognizing the reasonable measure of cost of new business afforded by a more defensible method of valuation, that they are avoiding rendering the loss to old policyholders permanent instead of only temporary, not merely by increasing their new business, but even by maintaining the same. In other words, the improvements which have taken place in regard to unwarrantable extravagance in cost of new business are traceable directly to the good results of even the limited recognition which a better method of reserves has received.

Mr. McClintock's Case.

Mr. McClintock informed President Peabody that in his views he had the concurrence of the general counsel of the company and of the vice-presidents who have special charge of the agency and medical departments. He then proceeds:

My present object is to lay before the Board of Trustees, if previously approved by the Committee on Insurance and Agencies, the reasons for continuing the former limitation substantially as it is by a voluntary act of the company.

First let me explain what I mean by using the word "substantially." Under the late law the limit of \$150,000,000 was prescribed for the insurance which might be paid for in any calendar year. This requirement involved a practical difficulty which was not foreseen when the law was drawn. A company can always know at any given time what policies have been issued, because they are issued at its own office. It can not know at any given date just what policies have been paid for, because payments are made at a hundred offices in all parts of the world. As the returns for De-

(Continued on Page 8.)

Fraternal Societies and Assessment Concerns

PART IV of the New York State Insurance Department report for 1910 was issued on Monday. It covers the business of 1909 of the assessment life and accident associations and the fraternal beneficiary societies doing business in this State. The statements of these associations as printed have been audited, not only as to their general financials items, but also as to their security holdings.

This volume includes for the first time the statements of the town and county co-operative fire insurance associations, which were brought under the supervision of the department by the provisions of Chapter 328 of the laws of 1910, being new Article IX of the Insurance law. Owing to the lack of uniformity in the methods of accounting used by these associations, it has been found impossible properly to audit their statements for 1909. This will be corrected as soon as it is found possible to do so, probably in the report for next year, it being one of the duties of the department under the new law to issue certificates of authority to these corporations not later than January 1 next, and it being its intention to accompany such certificates with instructions and report blanks that will accomplish the necessary uniformity in accounting and returns. The territory in which these associations are allowed to do business is restricted by statute. They are divided into three classes, as follows:

Advance premium corporations which may write business in any or all counties of the State when their insurance in force exceeds \$1,000,000; county associations which may write business in not more than five counties adjoining that in which the principal office is located when their insurance in force exceeds \$200,000; town associations which may write business in any or all towns of a single county after their insurance in force exceeds \$50,000. None of these associations, however, can write insurance in cities of more than 600,000

inhabitants. They are also restricted as to the amount at risk on a single policy. The following total figures of the 146 co-operative fire associations reporting are taken from their 1909 statements:

Premiums and assessments received	\$1,369,242
Other income.....	183,856
Total income.....	\$1,553,098
Losses paid	\$1,030,838
Other disbursements.....	537,638
Total disbursements....	\$1,568,476
Insurance in force.....	\$429,401,371

The volume also contains the detailed statements of the life, accident, fraternal and town and county co-operative fire insurance companies which have been placed in the hands of the department for liquidation under the provisions of Section 63 of the Insurance law. Such statements have been prepared by the special deputy superintendents of insurance appointed from time to time under this section of the law.

The comparative figures for the years 1908 and 1909 covering assess-

ment life and accident associations and fraternal beneficiary societies are as follows:

Assessment Life and Accident Associations.		1908.	1909.

INSURANCE IN FORMOSA.

S. C. Reat, American Consul at Tamsui, Formosa, advises the State Department at Washington of the need of fire insurance agencies in that island, as follows:

"American fire insurance companies have never paid any attention to Formosa. Nevertheless, the business in this line to be done here is not inconsiderable. British fire insurance companies have well-managed agencies, established through British firms, in both North and South Formosa. One firm has lately opened a special insurance department.

"There are five American tea houses

in North Formosa, and they carry policies on their stock from \$50,000 to \$75,000. The rate on tea and general merchandise is three-eighths of one per cent. But the risks are carried by British companies. Recently the manager of a prominent tea exporting house remarked to the writer that he was going to try to secure the agency for a certain British fire insurance company. When asked why he did not get the agency for an American company, he replied: 'Why, I will; I had not thought of our own companies because there are none out here.'

"The business to be solicited will not be limited to what foreign firms

will furnish. The Japanese and the Chinese, especially the latter, have insurable interests throughout the island. While there is some prejudice among the Chinese against insuring, still that prejudice is gradually passing away. In Daitotei, where the American Consulate is situated, lives a millionaire Chinese landlord, and most all of his buildings are insured. His example has been followed by others.

"Storm and tornado insurance could also be underwritten, but there is no opportunity for marine insurance, which is covered by the consignees and is so noted under letters of credit."

Merritt's Expensive Request

E. A. MERRITT, Chairman of the New York Legislative Investigating Committee, has sent the following request to the New York fire insurance companies for information, the compilation of which would involve the expenditure of from \$5,000 to \$10,000, in the opinion of underwriters:

Dear Sir—I desire to be able to present to the Legislative Investigating Committee some figures showing the actual experience of fire insurance companies on certain classes of risks, and also figures with regard to the amount at risk in certain congested districts. I request you to send to this committee at your earliest convenience the data called for below with regard to your company.

I may say that it is not probable that this information will be used as of individual named companies; it is the present intention to use it simply as combined experience, but no positive assurance of this can be given.

1. Information for the whole of the United States, or such part thereof in which the company operates (in case the company operates under more than one department the experience of each department separately is requested), as follows:

(a) Amount at risk, (b) premiums, (c) Losses, (d) Loss ratio, for each of the years 1907, 1908, 1909; (e) burning ratio on each of the following classes:

1. Dwellings (not including farm dwellings).
2. Schools.
3. Churches.
4. Public buildings.
5. Farm dwellings and property.
6. Wholesale mercantile, buildings.
7. Wholesale mercantile, contents.
8. Retail mercantile, buildings.
9. Retail mercantile, contents.
10. Warehouses, buildings.
11. Whiskey warehouses, contents.
12. Packing house warehouses, contents.
13. General storage warehouses, contents.
14. Furniture warehouses, contents.
15. Tobacco warehouses, contents.
16. Fibre warehouses, contents.
17. Cotton warehouses, contents.
18. Woodworking establishments.
19. Metal working establishments.

20. Textile factories.
21. Soap factories.
22. Miscellaneous manufacturing establishments (not included in Classes 18, 19, 20, 21).
23. Electric light and power plants.
24. Grain elevators.
25. Grain elevators, contents.
26. Other special hazards (no manufacturing).
27. Ice houses.
28. Sprinkled risks.
29. The business as a whole.

Note.—Classes 6 to 26 should be separated into sprinklered and non-sprinklered.

2. A—Amount of risk.

B—Premiums received thereon.

Both gross and net, as of the date of the receipt of this communication, in the following districts:

1. The district in New York City bounded by Chambers Street, the Bowery, Fourth Street and West Broadway.
2. The Metropolitan District of New York City.
3. The district in Philadelphia bounded by Delaware River, Race Street, Thirteenth Street and Walnut Street.
4. The district in Chicago bounded by Michigan Avenue, the Chicago River and Harrison Street.

In case any part of the above information cannot be given please state reasons therefor.

In any case where there is serious question as to what is to be included under the different classes in 1, please make it clear what basis you have used.

NATIONALE OF PARIS.

The Nationale Fire Insurance Company of Paris has deposited \$216,000 par value of securities with the New York Insurance Department and \$320,000 par value with the Bankers' Trust Company of New York City, its United States trustees, and is now authorized to transact business in the State of New York. The United States branch of the company will be managed by Starkweather & Shepley (Inc.), at Providence, R. I.

The Nationale is one of the oldest French companies, was organized in

1820, and has been in continuous operation for the last ninety years. The company is known to be one of the most conservative of all the European offices and has been exceedingly careful in its business. The total premium income received from organization of the company amounts to over \$121,000,000, and it has declared dividends since it commenced business of over \$24,000,000. The home office managing director is M. F. Mulsant, and its home office directorate contains the names of many prominent men.

The President of the Board of Directors is Count Pillet-Will, former Regent of the Bank of France. The other members of the board are as follows, viz.: Baron Hottinguer, banker, Regent of the Bank of France; M. Clausse; M. Davillier, banker, Regent of the Bank of France; Count d'Haussonville, member of the French Academy; Count de Germiny, former General Treasurer of France, Regent of the Bank of France; Count de Kergorley, M. de Waru, M. Vernes, of the banking house of Vernes & Co.; Marquis de L'Aigle, former Deputy; M. Monnier, of the banking house of Neufville & Co.; M. Verge, honorary member of the Council of State; M. Frederic-Moreau, mining engineer; Baron Robert de Rothschild, banker and mining engineer; Count de Montalivet, M. Mallet, of the banking house of Mallet Brothers.

AGENTS WANTED
AT UNREPRESENTED POINTS

L'Union St. Jean Baptiste d'Amerique

THE report on the joint examination by the New York and Massachusetts Insurance Departments of the fraternal beneficiary society known as L'Union St. Jean Baptiste d'Amerique, of Woonsocket, R. I., has been filed.

The examination was conducted by these States for the reason that the laws of Rhode Island give the Insurance Commissioner of that State no power to examine insurance societies of this character. In regard to the examination the New York department issued the following statement:

"Conditions developed show gross irregularities in the management of this society, which have led the examining departments to bring the facts to the attention of the Attorney General, who is the prosecuting officer of Rhode Island, and, it is thought, again emphasize the necessity of making applicable to fraternal beneficiary societies that rigorous supervision required by statute over all stock and assessment insurance companies.

"L'Union St. Jean Baptiste d'Amerique was incorporated in Rhode Island as a literary society in 1900, admitted to do business in Massachusetts in 1901 and in New York in 1906, and at the present time, in addition to such States, is operating in Maine, Vermont, New Hampshire, Connecticut, Illinois and Michigan. It has at present 305 councils, approximately

25,000 members, and \$9,131,000 of insurance in force. Its membership is, to a considerable extent, composed of French Canadian residents of those States. Its assets, at the time of the examination, aggregated \$362,485, and the excess of assets for the protection of members in lieu of a policy reserve was found by the examiners to be \$263,919.

"The examiners conclude that, while the society is perfectly solvent, there has been negligence and misconduct on the part of some of its executive officers and that a portion of its estate and effects has been wasted or lost. They call particular attention to the shortage chargeable to Secretary J. Ad. Caron, amounting on June 30 last to \$3,284, which, however, has been in part made up; to a shortage in the mortuary fund, amounting to at least \$12,574, due to a falsification of the returns from the councils, and recommend that the persons responsible for these shortages should be compelled to make restitution. The report also notes large investments in realty and in demand notes contrary to the insurance laws of Massachusetts and New York; the making of false annual statements to such States, and neglect of duty on the part of the officers of the society.

"Mention is also made of a systematic falsification of records during the last two years; of the issue of policy

contracts not permitted by the laws of New York and Massachusetts; of disproportionately large investments in realty and of unauthorized loans on promissory notes without collateral—these investments alone representing nearly two-thirds of the total assets of the society.

"As a condition to the further conduct of business in Massachusetts and New York, the Insurance Departments of those States have required that the Executive Board of the society be summoned in special council to consider the condition of the society as shown in the report, that steps be taken to guarantee in the future an efficient system of accounting so as to safeguard receipts and disbursements, that all moneys abstracted from the funds of the society be at once replaced, that steps be taken to sell all real estate excepting the home office building, that all demand notes be called in, that expenses be cut down, that all forms of insurance contracts not authorized by the laws of New York and Massachusetts be discontinued, and that—to the end that such departments may be fully informed as to the conduct of the society—monthly reports be made to the departments of these States, until further notice.

"The departments are informed that the Secretary of the society has resigned."

Insurance News in the West

CHICAGO, Nov. 9.—The Insurance Brokerage Association of Chicago is getting busy with certain so-called brokers, who are said not to be entitled to receive commissions under Chicago board rules or to be violating those rules. Two persons have been fined already, and other cases will come up later. If half the complaints made on the

Street are true the brokers have a large job before them in cleaning house. While the rules of the board are strict as to giving rebates, according to common report there is more or less direct rebating going on, and much that is indirect, such as throwing off the entire commission or more on plate glass, liability or other lines of casualty insurance as a favor to fire insurance customers.

Some of the leading brokers recognized the need of a housecleaning when they organized the Insurance Brokerage Association. Those who have been investigating fire insurance expense have said some harsh things about the brokers, and some members of that class recognize the danger of legislation which will put them out of business unless they are able to show some good reason why they should be in it. There are brokers in Chicago who are giving their customers good service and earning every dollar they receive, but there are others who are doing neither. It is the latter sort that endanger brokers as a class.

* * *

It was an eminently satisfactory meeting that the Western Insurance

Bureau held last week. It began about 2:30, and before 5:30 the bureau had taken jurisdiction over half a dozen States, instructed its Executive Committee to take up certain important matters, declared its willingness to co-operate with other companies for a reduction of expenses in the

THE LEADING FIRE COMPANY OF THE WORLD

"excepted" cities and was ready to adjourn. There was perfect harmony and not a complaint of violation of rules by any member.

Chairman E. G. Halle was asked for an interpretation of the bureau's resolution on the subject of reduction of expense in large cities. He intimated that it is now up to the Union to start an expense reduction movement if it sees fit. The bureau stands ready to co-operate, but apparently does not feel under any obligations to start negotiations when it was not the body which withdrew from the former one.

* * *

The resignation of James V. Barry as Insurance Commissioner of Michigan, announced last week, will cause some regret, especially in the West. I say "some regret," because the sorrow at losing him from the ranks of insurance commissioners is tempered by the reflection that as head of the Publicity Bureau of the International Association of Accident Underwriters he still will be connected with the insurance business, and presumably will enjoy an income more in keeping with his worth than the salary of an Insurance Commissioner afforded. It would be pleasing to insurance men if Barry, like the brook and the college girl, would "go on forever" as Insurance Commissioner, for the West never raised a better one. However, he served this last term only because of his fidelity to Governor Warner, who desired him to serve through his second administration.

Mr. Barry is peculiarly fitted for his new duties. Before he became Insurance Commissioner he was in the local fire insurance business in Lansing and served as a newspaper editor and as capital correspondent of a number of outside newspapers.

He knows the ways of politics; he knows the newspaper game; he has held a supervisory position in the State, where the "dollar-a-month" accident policy originated and while several of the leading companies in that line were evolving from little assessment concerns; he is conservative, fair-minded and level-headed. His ability for this kind of work has been recognized before, as the Western

Union tried to get him as head of its Bureau of Publicity and Education, but unsuccessfully, as he was not then ready to leave the Commissionership and he did not want to move to Chicago.

Whether Mr. Barry's retirement from office will have any effect on the fire insurance expense propaganda remains to be seen. As chairman of the committee on this subject he has been much to the fore in the last few months. Probably there will be another to play Elisha to his Elijah, but there are comparatively few among the Commissioners who have gained a position where their words carry the weight of his.

* * *

The architect's painting of the projected Underwriters' Building, which has been on exhibition at the rooms of the Chicago Board of Underwriters recently, has attracted much attention. There seems to be no doubt that the project will go through, and almost as little that every fire insurance office now located in the National Life Building will move to the new building on or about May 1, 1912. A number of general agencies now in other buildings will go there also. It is predicted that after the date mentioned not a local fire agency will be found on La Salle Street. Agents of the promoters are now working among the life and casualty offices, rounding up as many of them as possible. It looks as if the insurance offices of any kind that depend upon fire brokers for business will be seriously handicapped unless they have headquarters in the Underwriters' Building.

* * *

It looks now as if the surety companies doing the largest business in Illinois would have to reduce the estimates of the year's writings in the State made by their Chicago representatives earlier in the year. The manager of one prominent office admits that he has set his mark about \$50,000 lower than he had it last Spring. During the first half of the year the increases were such as to justify high estimates, but the business slowed down during the vacation

season, and in most offices it has not picked up again as much as was expected. Of course, nearly two months of the year remain, and, with the cleatation out of the way, there may be a revival of business which will help records out, but in all probability not enough to bring them up to early estimates. However, a number of the companies will show a considerable gain over last year. It is likely that six companies will show over \$100,000 in Illinois fidelity and surety premiums as against five last year.

* * *

Liability loss ratios in Illinois will be watched with considerable interest when the figures are published early in the new year. Two prominent companies have admitted that they are going to make a bad showing. Another, with a smaller volume of business, is enjoying a favorable loss ratio. Particular interest will centre, however, in a few of the smaller companies. They have been active and have made considerable increases in their business. As is usual, some of their larger competitors have attributed this increase to rate cutting and free underwriting. While the loss ratio of a young liability company, or one increasing its volume rapidly, is deceptive, it will be almost a disappointment to some liability men if certain of their competitors do not show largely increased loss ratios.

* * *

According to reports received here, the Bankers' Surety of Cleveland is likely to make a much improved showing in its annual statement. For several years now the company has been handicapped to some extent by a very small surplus. Its old agents have been loyal however, and in the last two years the company has done some splendid work in organizing its agency plant in the smaller towns, with a resultant large increase in income. With careful underwriting, the losses are said to have been held down this year to an extent to give the company a surplus approaching \$100,000, based on Ohio department requirements as to non-admitted assets.

In New England

BOSTON, Nov. 9.—The annual
meeting of the Boston Board
of Fire Underwriters took
place last Tuesday. The de-
tailed reports of the inspection, sprin-
kler and inspection departments were
submitted by F. J. Cabot, Secretary,
and were summarized to some extent
in the annual report of President
Charles B. Wheelock. Extracts from
Mr. Wheelock's report are appended:
"The total number of inspections
(13,578) is the largest ever made in
any one year of the board's life, and
is nearly twice the number (7,289)
made ten years ago. Thirty-seven
buildings of fireproof construction
have been erected during the year.*

* * * This makes a total of 379
buildings of fireproof construction
erected since 1897, when the board
began keeping track of their con-
struction, and the assessed valuation
of first class buildings completed be-
tween May 1, 1909, and May 1, 1910,
is \$4,282,800, bringing the total value
of such buildings erected since 1897
up to \$54,048,100. The supervision of
such buildings is carried on in such a
way that no material change in con-
struction and no serious defect in the
method can take place in the interval
between visits.

In the electrical department a
change in the districts covered by the
inspectors has resulted in a consid-
erable increase in the amount of in-
spections made. It is, however, fair
to say that much more could be done
with a profit to the companies, espe-
cially in view of the fact that a not
inconsiderable portion of the wiring
has now been installed so long that
it may be deteriorating merely
through age. The co-operation of the
city Department for the Inspection of
Wires has added materially to the
benefits to be obtained from our in-
spection work. The construction of
the large number of fireproof build-
ings has required an increase in the
number of visits to finally decide that
the electrical equipment was installed
in such buildings in a thoroughly sat-
isfactory manner. * * *

"Ten new installations of automatic
fire alarms, four new installations of
sprinkler supervisory systems, and
fifteen sprinkler equipments have
been installed and inspected during
the year. The loss from fires caused
by electricity continues small.

"The work at the Grand Junction
terminal is nearly at an end, and by
the first of January we may fairly
expect that this great property will
have a fire-fighting equipment which
will compare favorably with any sim-
ilar great property in the world.

"The result of fire under sprin-
kler protection has been better than
in any previous years. The total loss
being about \$11,844, which gives

a loss per fire of about \$360, a loss
which compares favorably with that
under sprinkler protection in the risks
insured in the Associated Factory
Mutual Insurance Companies.

"An especial effort has been made
during the year to co-operate with
the New England Insurance Exchange
in conference so that to the greatest
extent possible forms and underwrit-
ing methods shall be in agreement,
and I think it is fair to say that we

Address
either:

are much nearer this greatly sought end than at any previous period in the board's history. I can also announce to you with pleasure that the National Board of Fire Underwriters has undertaken to co-operate with us and to give us the assistance of their engineering force in deciding the problems of fire protection such as the introduction of high pressure service for use at fires only.

"I am informed that a new connection has been made to the water service in East Boston at the easterly end of what is known as Chelsea Creek, thus improving the fire protection in this section. Our engineers still feel, however, that much remains to be done about the supply of water in East Boston before it reaches a satisfactory point. Another matter which is receiving the close attention of your Executive and Rating committees is the increase in risk through Dorchester from the growth of the three-flat frame tenement and apartment houses. On this I may say, while the problem has not reached a final solution, we believe that we can present to you in a short time a much more satisfactory set of rates on this class of congested dwelling construction."

The election of officers resulted in the choice of the ticket as reported by the Nominating Committee and printed in last week's CHRONICLE, headed by Charles B. Wheelock, for President, whose efficient administration made his re-election a foregone conclusion. Harrie H. Whitnew succeeds the late G. C. Holt as Vice-President, and Mr. Cabot, the energetic, of course, continues in the Secretaryship.

New England Brevities.

At Newburyport, Mass., on Monday L. E. Thayer was held in \$1,500 bail on the charge of setting fire to the Orpheum Theatre, which he owned, on October 16 last, although he had entered a plea of not guilty.

* * *

Francis H. Stevens, Williard C. Hill and Joseph F. Barley were elected honorary members of the New Saturday. Joseph Fessenden, special

agent of the Milwaukee Mechanics, was elected an active member.

* * *

O. E. Cook, who for the last five years has served the Citizens' of Missouri in its New England field, has been appointed special agent of the Fidelity-Phenix for Eastern Massachusetts and Rhode Island, in succession to Joseph F. Barclay, resigned, who has taken charge of the New England interests of the New York brokerage firm of F. R. Cruikshank & Co.

* * *

The Boston agency firm of Cyrus Brewer & Co. is shortly to remove to the buildings at 44 and 48 Kelly Street, which are to be remodelled for its use. Francis H. Stevens, now of 48 Kilby Street, has in consequence, secured the office at 55, across the way, while R. S. Hoffman & Co., of 44 Kilby Street, will move to 12 Central Street.

* * *

D. R. Lecraw, of the R. A. Boit agency, Boston, has been appointed manager of the marine department of the Commercial Union's United States branch, New York. Howard Jones succeeds Mr. Lecraw as head of the marine department of the Boit office.

Frank L. Owen, hitherto examiner at the home offices of the National Fire of Hartford, has been appointed New England special agent for the County Fire of Philadelphia.

* * *

L'Union of Paris, represented in the United States by Starkweather & Shepley, has been admitted to do an agency business in Massachusetts. The Swiss Reinsurance Company of Zurich has been admitted to New Hampshire.

* * *

J. D. E. Jones, who recently severed his official connection with the Puritan Life of Providence, has written a letter to the stockholder of that company, commending to their best consideration an offer of reinsurance by an old and well-established company.

EMIL SCHWAB.

FEDERAL LIFE POLICIES.

The first matured endowment policies of the Federal Life Insurance Company have just been paid. One was a \$1,000 ten-year endowment, paid to Andrew T. Taylor, Fond du Lac, Wis., and the other was a \$2,000 ten-year endowment policy paid to Prof. T. C. Chamberlin, of the University of Chicago. Prof. Chamberlin sent his check for \$233.36 to pay an annual premium, and he was surprised to have the company return his check with the notification that it was unnecessary and that his policy had matured for its face value of \$2,000 and \$234.04 of dividends, making a total of \$2,234.04.

OBITUARY

Benjamin F. Crouse.

MUTUAL TO LIMIT BUSINESS.

Continued from Page 1.)

cember 31 cannot be finally made up until early in January, when all the branch offices have reported which policies have been paid for, a considerable margin must be allowed for safety, since otherwise the legal limitation might be exceeded. To obviate this difficulty I propose to include in the enumeration not only the policies paid for in the calendar year whenever written, as provided in the late law, but also such policies as, because they are not yet paid for, happen to be outstanding at the close of the year, the whole not to exceed \$170,000,000. As the course of business is now running, a variable amount, considerably more than \$10,000,000, but no doubt less than \$20,000,000, is necessarily left outstanding at the end of the year. The exact amount paid for when the company's new limit is operative will probably be slightly more than the \$150,000,000 fixed by the late law.

Limitation Will Please.

The limitation will be a strikingly popular feature, becoming for various reasons more and more advantageous as time goes on. Circulars will be issued explaining to agents and to the public the beneficial effect of the limitation as tending to increase the annual dividends to policyholders. The company already finds its large dividends attractive to applicants, as far as they have heard of them. This usually means applicants for new policies who are already themselves insured in this company on old policies on the annual dividend plan, because agents do not usually find any statement at all about dividends to be necessary to the average applicant. Concerning dividends, our agents usually say, if they say anything, that those of this company are as good as any. In special cases, and particularly in competition with other companies, stress is laid on the dividend argument, and our agents are getting more and more to appreciate its strength and effectiveness. In general, the dividend argument is the best possible one to use in conversation. It creates and strengthens the "good will" of the business. That good will is not much talked about, but it is the backbone of our popularity. It is maintained and increased by the satisfaction of our policyholders with their dividends and by the testimony of policyholders and agents of other companies. The agent of any other company who is asked casually concerning the standing of this company and who does not happen to be in immediate competition will usually say that it is a very good company, next to his own. He would not say such a thing if he did not know how good our dividends are, as well as how old and how strong our company is. Up to a quarter of a century ago such outside testimony was practically unanimous in favor only of the Mutual Life. Since then the current has run in favor of the Northwestern as the best company, but there are signs of its already turning to the old favorite.

Agents of the company may feel at

first some uneasiness on hearing the announcement of the prospective limitation, even though it may be years before it can take effect. They may suppose that it will somehow affect their income, and if so it would act as a wet blanket on their enthusiasm. It is true that the company is as yet far short of the amount of new business contemplated, and, in fact, no company in the world has within recent years issued \$150,000,000. The benefits to policyholders certain to accrue in future will, of course, be understood and appreciated, but agents may naturally have a feeling that the system may eventually injure their personal income. This fear will not last long, because of the plain distinction which must be drawn between a limit upon the total amount issued by the company and the limitless amount of insurance which may be issued by any one agent. Individual agents will not feel the limitation at all, but will be as free as ever to take all good business that comes in their way. The reason is that last year's agents die or resign in numbers so great that the business cannot be kept up without getting some new agents to take their place. The agents who remain in any year may, therefore, feel free to use all their energies the next year, the limitation of the total amount having no effect except upon the engagement of new agents, which will be somewhat curtailed.

A positive statement that the company will now of its own accord continue the limitation heretofore imposed by law will be welcomed by those pol-

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

icyholders who understand the merits of the case. The public has not heretofore been advised by us of the existence of the limitation law because it had not begun to affect our business. The company has meanwhile felt satisfied with the law as it stood, believing that after the end of next year the time would come when the practical advantage of the limitation would more and more be universally recognized. As soon as the limit should come to be in actual operation concerning this company's business it was our intention to bring the fact prominently before the public possibly by advertising in the press—certainly by the company's own publications and by the active exertions of its numerous agents. The law being changed, it is desirable that some appropriate action be taken to continue the prospective benefits taken away by the change.

This subject of a limitation had been much discussed for many years, and repeated abortive attempts at legislation were made before the law of 1906 was passed by the Legislature of New York. It was generally supposed, except among actuaries, that the question of dividends was involved only indirectly. One of the indirect results of the good management hoped for from the limitation of new business was supposed to be an increase of dividends, but public discussion was chiefly given to the necessity of discovering some remedy for the intense competition prevailing between the large companies, as well as to stop their further growth as a matter of public policy. Many feared the dangers that might be caused by the mere size of these rapidly growing aggregations of capital. Mr. Fackler began an agitation years ago, chiefly for the reasons just referred to, and Mr. McCall expressed the opinion that there was "a limit to human capacity." The lapse of years has diminished to some extent the fears which used to be felt concerning mere size, and the reforms of 1906 have diminished the evils of competition, largely in consequence of the limitation law now radically altered.

The Recent Repeal.

The Legislature has now modified the law, and the great companies are again permitted to enjoy their former freedom of expansion within reasonable limits. For brevity I shall speak of the recent modifica-

tion as the repeal of the limitation law. The repeal is due to a change in public sentiment, of which some explanation may be necessary. Briefly this change was partly due to the lessening of the fears directed against the mere size of the large companies, partly to a feeling that so sharp a check to competition appeared to be no longer necessary, but chiefly to the persevering efforts of the New York Life Insurance Company, the only company which has yet become subject to the limitation. That company expressed with obvious honesty the strongest indignation against the hampering of its business by an iron-clad law, and resented as an impertinence the interposition of the Legislature in the company's private affairs. In the intervening four years it has pushed its campaign strenuously and unremittingly, with the aid of innumerable articles in the insurance journals and elsewhere. It has done so without opposition, because those insurance men who favored the law preferred to avoid the invidious distinction of publicly opposing a business competitor. I myself, who felt the necessity of speaking out at a time when the decision hung in the balance, though my views were well known to be favorable to the law, confined my efforts for the same reason to two brief private letters addressed to public officials whose duty it was to weigh all proposed legislation carefully.

No such change of opinion appears to have taken place on the part of such prominent individuals as have given serious attention to the subject. The two men who have from their position as the legal advisers of the Armstrong committee been especially prominent in the work of framing this law, Messrs. Hughes and McKeen, have constantly upheld the permanent value of their work. Soon after the passage of the law Mr. McKeen entered this office as the general counsel of the company, and his views are well known. Governor Hughes has been the staunch supporter of the limitation law, and, while he now has signed the repeal, he has not said a word, so far as appears, in explanation of his course. The enactment which I call a repeal preserves in many respects the beneficial features of the law of 1906, and it is my belief that the Governor, to preserve those features, finally agreed to this compromise in order to set at

rest an agitation which would otherwise have continued beyond his term of office, and perhaps resulted in throwing the whole insurance law of 1906 into the melting pot. It was said in one of the papers that the Governor had approved this compromise in advance, but I have it from two different sources that this statement was positively incorrect, and that no one knew up to the last moment what his action would be. Among the many "30-day bills" awaiting the action of the Governor after the Legislature had adjourned a number remained until the thirtieth day, and it is said that the very last of these bills to be signed was the compromise bill in question.

The new law will have no effect whatever in preventing a moderate increase of annual business, but only upon those companies which seek to swell their annual increase of 12 or 15 per cent. Companies desiring to compete to that extent in regard to rapidity of growth are compelled also in a decidedly ingenious manner to compete in regard to economy of management, the one going hand in hand with the other automatically. In the prevention of reckless rivalry the new provision will be effective, and it is, therefore, vastly better than a complete repeal would have been, but the compromise, just because it is a compromise, is seriously defective. Economy is not the only meritorious feature in the management of an expanding life insurance company. The torrent of competition may merely turn in another direction. The compromise enforces the virtue of economy in case of extreme competition, but it makes no corresponding virtue of a wise selection of risks, not to speak of the cardinal virtue of making the best dividends to policyholders.

The companies are in the unfortunate position of being compelled to make every increase in their annual business at the expense of their present policyholders. Once fairly started a company must always do at least enough business each year to keep up the amount of its insurance outstanding. The English companies as a class in comparison with the American have been distinguished for the conservatism of their management, averaging much smaller in size, though continuing to make larger dividends to policyholders. Some of the British companies have long operated on an avowed system of limitation.

CHICAGO'S GREATEST COMPANY

ILLINOIS LIFE INSURANCE CO.

OLDEST IN CHICAGO

CHICAGO

LARGEST IN ILLINOIS

JAMES W. STEVENS, PRESIDENT

We Guarantee where others Promise

The year 1909 was the most successful in this company's already splendid record of successful years.

INSURANCE IN FORCE

FIFTY MILLION DOLLARS

The proposition is not a new one in this company. In 1891 the idea took noteworthy shape in the issue of an order by the then President, Mr. McCurdy, which if continued in force might have involved consequences of great moment.

The important announcement was made in November, 1891, that "during the year 1892 the company will voluntarily limit the amount of new business to be assumed to the sum of \$100,000,000. The company's business will be continued on strictly conservative plans, maintaining the integrity of its present agency force, avoiding false methods and declining to engage in unhealthy competition, and it will limit itself to placing upon its books a safely increasing volume of carefully selected and enduring life insur-

ance not to exceed the amount stated." The statement made at that time, of which the concluding words have been quoted, was of considerable length. It also formed part of the annual report to policyholders printed soon afterward. I need not say that it met with my own hearty concurrence.

The determination thus announced was accompanied by a suggestion that the other large companies, with our own, should make the same limitation and make it permanently. This suggestion anticipated the law of 1906 by fifteen years, except that the limitation was fixed at a smaller amount. I quote these sentences in full from the President's statement already cited. "There could be no reasonable complaint that the facilities for life

insurance, and for its healthy growth would not be ample if each of the leading companies engaged in the business would assume new risks each year to the amount of \$100,000,000, and no more. Such a limitation would remove all motive for carrying competition beyond the degree which is advantageous to the business. Each of the larger companies can readily maintain its business at this figure, without unreasonable exertion, without the payment of excessive commissions, and without attempting to deprive any other company of the services of valuable agents. The direction which competition would then assume, and in which all the surplus energy of each company would be applied, would be in the selection of risks, the security and productiveness of investments, the economy of administration, and the consequent achievement of substantial success in financial results."

If this programme had been carried out much less insurance would have been issued by this company, and if "the selection of risks" and "the economy of administration" had matched the results achieved by good companies elsewhere, our death losses, and especially our lapses, would have been so much lighter that at this present time the volume of our business in force, as well as of our assets, would have been larger than it is now, and our policyholders would have been receiving all along the highest rate of dividends.

So striking a statement may not seem credible, but it is, nevertheless, certainly correct. In the eighteen years which have elapsed the total amount in force has increased by about \$753,000,000, while in the same time the insurance in force in the Northwestern Mutual Life Insurance Company has increased by about \$335,000,000, almost the same, although the new paid-for insurance issued by that company during the same period has averaged only \$70,000,000 per annum. It is well known that this company issued each year more than \$100,000,000, increasing until toward the close of the period our yearly issues exceeded \$200,000,000. It is probably known to all interested in the subject that the dividends of the Northwestern during the same period have not been excelled. The average rate of interest of the two companies has been about the same. Our own company had in force at the beginning of 1892 about \$420,000,000 more insurance than the Northwestern, and in the comparison a proper allowance for the lapses and deaths should, of course, be made. (Lapses always include surrenders in this letter.) If the paid-for new business of the Northwestern during this period had been \$100,000,000 per annum, instead of \$70,000,000 per annum, the lapses and death losses on the \$540,000,000 of extra new business issued in the eighteen years would have left in force of this amount much more than \$300,000,000, whereas the \$420,000,000 of old business would have been reduced to much less than \$300,000,000 in the same period. The margin from both causes may be considered to offset the fact that the Northwestern has been doing a growing business, instead of maintaining a level amount throughout the period. I consider, therefore, that the strong

Dividends After 1911.

Unless the company's business after next year is limited as suggested I do not think that the annual dividends after 1911, which ought to be substantially better than those of 1910, can be permanently maintained on the enlarged basis—namely, a permanent basis giving each year the same dividend as was paid the year before on a similar policy issued one year earlier. This is what is meant by continuing a certain basis of dividends, upon which, naturally, each policy as it gets a year older receives on the same premium a slightly larger dividend. After 1911, or possibly after 1912, the regular surplus earnings of the company can no longer be depended upon to meet the increasing expense, both first year and renewals, of our growing business, supposing the business to increase beyond the limit heretofore fixed by law. I assume, of course, that the business conditions remain unchanged. We are apparently increasing our business from \$100,000,000 at the beginning of 1910 to perhaps \$125,000,000 at its close, which would be an increase of 25 per cent. In 1911 further increase is likely, and we may possibly even reach our limit of \$150,000,000, a limit which, whenever it may be reached, we should maintain practically unchanged for all time to come, unless, indeed, contrary to all present possibility, some feasible means should be found in the future to increase the annual business without cost to existing members.

After such time as the business has attained what I consider its normal magnitude, any increase of business must be at the cost of the annual dividends to policyholders, either positively, by a slight diminution in the scale of the annual dividends, or, relatively, by making a smaller increase. Is not this company bound in these circumstances to limit its business for the express purpose of making the largest possible dividends? Other companies may consider the presumed necessity of a healthy growth their paramount object, but this company was organized on the purely mutual basis, is legally owned by the policyholders themselves, and is managed by a Board of Trustees elected by the policyholders. The great major-

ity of the American companies—indeed, all which have begun business within the last fifty years—are, on a different basis, under the management of stockholders. Leaving out of the question a few purely proprietary companies, the standard form of organization is one in which the policyholders get annually what profits remain after a certain maximum percentage, usually 7 per cent, has been paid to the stockholders upon their investment. The policyholders gain by this means the support of the capital stock, \$100,000 or more, which is particularly useful in the early years, and derive such benefit as may result from the pecuniary interest of the stockholders in the good management of the company. The stockholders, on the other hand, possess such incidental benefit as may be derived, in influence and good will, from their control of the management. For a number of years the directors of such a company may properly consider that a healthy enlargement will be more in the interest of the policyholders themselves than the largest possible immediate dividends. Until a company attains a certain size it cannot be safe against fluctuations in mortality. It is, therefore, usual in the management of such a company to draw the line so as to maintain a healthy growth on the one hand and to maintain satisfactory dividends to policyholders on the other. It is obvious that small and young companies may properly lean more toward growth, and that old and large companies more toward dividends. Personally, I consider that the true interest of the stockholders, as well as policyholders, requires that the older and larger companies should place a fixed limit upon their annual new business. That, however, is a matter which must be left to the managers of such companies themselves, to whom the policyholders have confided their interests. In such a company as I have described the policyholders have no claim except from such surplus as may be left after the business of the year has been closed.

The Mutual Life Insurance Company is in a radically different position. The oldest life insurance company in the country, it was started on a strictly mutual basis, without stockholders, and has ever since remained subject to the direction of a Board of Trustees elected periodically by the policyholders themselves. It might

perhaps have been called by the name of society rather than that of company. For the first quarter of a century there was no occasion for such a line to be drawn as that which is now necessary in younger companies between "growth" and "dividends." That period was the golden age of life insurance, when the greater the amount of annual business the greater the surplus for dividends. In those days there were only a few agents, who, having no competition, were contented to receive 10 per cent on new premiums and 5 per cent on renewals. There was little expense for medical fees, and none for travelling. Not only were the expenses light, but since lapses worked a total forfeiture the gains of surplus to the policyholders were large. At the beginning of the company, in 1843, a hundred men were got together for the purpose of insuring each other's lives, and to effect a periodical division of the surplus among themselves. For many years their undertaking was successful. They were glad to admit as many as possible into their membership without cost to themselves in order to strengthen their organization.

The Propagandist View.

The second quarter of a century was one of increasing expense for new business and diminishing profits from lapses. After the Civil War a great number of new companies came into being, attracted by the apparently certain combination of a safe investment for stockholders, good employment for promoters and others and large dividends to policyholders. The thing was overdone, and great disaster was the consequence. The cost of getting the business increased, while the liberalization of contracts diminished the profits from lapses, both causes combining to create much misery among insurance men in this second quarter of a century, instead of the happiness expected by all concerned. The companies organized before the war were already securely established, but the conflict had begun between the two theories of management which has lasted until this day. The second quarter of a century of this company, and, therefore, of the life insurance business in America, was one in which a divergency between "growth" and "dividends" as motives sprang up and grew to maturity. The commissions were in-

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

creased from 20 per cent, which was paid in the latter part of the first period, with 5 per cent on renewals, to 10 per cent on renewals, besides whatever was found necessary on the first premium. It was usually a time of difference of opinion between the actuaries, who desired large dividends, and other officers, who naturally considered themselves responsible for a certain degree of expansion.

It is difficult to conceive the earnestness with which many life insurance men held to the view that, although dividends were desirable in themselves, yet when they came in the way of expansion, dividends must go to the wall. It must always be remembered that the companies organized before the war had then no such dilemma to face as that which confronted them later. The officers and agents became deeply imbued with the idea that rapid expansion was their first duty, because in the early days of insurance the larger they made their company, the greater were the immediate dividends to policyholders.

What we may call the propagandist view of life insurance continued in substantially undiminished vigor into the third quarter of the century of the Mutual Life, and of American life insurance as well, a period which has not yet expired. The then President of this company, Mr. McCurdy, strongly held this view. Although he issued the announcement already quoted, that for the year 1892 the paid-for business should not exceed \$100,000,000, he did so only tentatively, for the year 1892 only, unless there should be a combination of the three companies upon the limitation. By the end of 1892 he had completely rejected the advice on this subject which he had temporarily accepted the year before, holding thenceforward the avowed idea that the chief object of every company is the enlargement of its borders, in order to permit every home to share in the

blessings of life insurance. It is my duty to state as clearly and forcibly as it is in me to do that the Mutual Life Insurance Company of New York was organized for the purpose of carrying out both theories as long as they should not conflict, but that now, since the two ideas became discordant, it should cease to increase its rate of growth, but instead should pay the largest possible dividends to its members.

Growth Vs. Dividends.

The question may naturally occur, Why, life insurance alone, as a business, should be subjected to such a limitation, apart from the well-known deleterious effects of excessive competition. Why must there be necessarily any such conflict between growth and dividends? The explanation lies in the law of many States and countries, requiring the holding of what is known as the "net reserve" upon each policy issued. This law was not necessary in the nature of the case, but it has been so fortified by subsidiary laws and the custom of the business regarding policy contracts as to make a change impracticable. This law requires that the first net premium on each policy shall, when received, be set aside to meet the policy claims, so that only the "loading," at present averaging 22 per cent, can be used for expenses, while the expenses themselves amount on the average to about 100 per cent. Some companies working on the general agency system are able to unload a part of the expense upon their general agents, but such companies are compelled to pay "renewal commissions" in greater volume upon the second premium and thereafter, so that they have to pay more in the end.

I now state in order certain points in some detail:

1. The company does not need to fix a limit below that already fixed by the late law. Whatever the previous

cost of its agencies may have been, our 100 branches at home and abroad have now been established on a scale to warrant the doing of much more than \$100,000,000 of new business per annum, the smaller totals of the last few years having been restricted by temporary causes only. Regarded as a manufacturing establishment our plant is constructed with a view to doing from \$125,000,000 to \$150,000,000 of business per annum. If in 1907 we had cut the plant down, say one-quarter, after our business had been established in so many places, the proceeding would have been attended with serious loss. The magnitude of our operations is such that the limitation of \$100,000,000 per annum proposed at the beginning of 1892, when we had in force a total insurance of less than \$700,000,000, would have required a heavier rate of expense for new business, including the proper fixed charges, than the \$125,000,000 per annum, perhaps increasing during 1911 to \$140,000,000 or \$150,000,000, now imposes upon a total outstanding business of more than double the amount. Nevertheless, our new business would have had to be cut down to a smaller scale, did it not happen that two circumstances combined during the last few years to render these years specially fruitful in surplus earnings, the great saving in expense for which your administration has been noteworthy and the great reduction effected during the last ten years in renewal commissions. It must be remarked, by the way, that our renewal commissions must now again increase to some extent, owing to the change of system enforced by the law of New York. Our profits on securities also have played a considerable part in swelling the surplus earnings of recent years, but such profits have been offset by the reduced valuation of the company's buildings. The effect of the two chief causes first referred to has been to enable the

company to make signal increases in the annual dividends, of course including in a proper proportion the dividend reserves on those policies on which dividends are deferred. At the same time we have been enabled to strengthen our reserves to a considerable extent, though they are not yet equal in all respects to the reserves held by a few of the most conservative companies. After one or two years more our regular surplus earnings, fluctuations apart, will be just about enough to meet our annual dividends, provided our new business is limited to \$150,000,000 a year. During the last four years our plant has been kept up on a certain scale, in the expectation that the limit hitherto existing will be permanently continued, everything having been shaped for our not exceeding the legal limit.

2. **The greater the size of any company the smaller must be its percentage of annual growth,** allowing for variations in exceptional circumstances. This is a well-known principle of the business, long recognized openly or tacitly by many authorities, and particularly by the leaders of the large companies who have at various times favored the idea of a limitation law, as well as by the authors of the report of the Armstrong committee itself. When a company is newly established its losses are light, while the losses of an old company are heavy. A company which has a large body of old business is depleted much more rapidly by death losses and lapses than a young company started only a few years since. There is greater proportional expense attending any large life insurance company, except, of course, those expenses which may be called fixed charges. That portion of expenses paid for new business within the legal margin, and which I shall call marginal expenses, appears to have been actually a greater percentage in the three large companies, according to the last report of the New York Insurance Department (1909), than in the great majority of smaller companies. The general principle of slower growth is recognized by the present law of New York, which limits the annual business of different companies according to their amount of insurance in force. They are arranged in groups, the group having the smallest amount in force being permitted to issue the largest proportion of new

business. The tendency, in short, is generally recognized.

3. **The oldest and strongest company in this country, and with one exception the largest in the world, should take the lead in a voluntary limitation.** The older and larger the company, the greater the tendency has been found to be toward a slackening of the pace as regards growth in size, and this company is precisely the one to take the lead in a movement of this kind.

4. **The proposed action is timely.** Delay may be injurious, because all concerned should be set at ease as soon as possible after the abrogation of the late law.

5. **What is saved in the expense of new business goes to increase the dividends of the policyholders.** I speak now of this direct effort, leaving other causes for increased dividends indirectly due to the limitation of business, to be spoken of later. I shall also consider separately the legal and moral rights of existing policyholders to such increase of their dividends. Let us suppose the limit to have been reached at the end of any given year, say, for example, 1911, and that (apart from maturing funds on deferred dividend policies) the annual dividend a year later, in the ordinary course of things, would equal the surplus earnings, provided the limitation was adhered to during 1912. If now we further assume that the limit is to be exceeded in 1912, then for each \$10,000,000 of extra insurance there must be about \$250,000 paid out in expense (less loading), reducing by that amount the surplus earnings of 1912, and by an equal amount the annual dividends at the end of the year. If expansion is to go on at all, such a rate of growth would be thought conservative by life insurance experts. The opportunity for twice that rate is eagerly sought by the one company larger than the Mutual Life. Our own company this very year is making a still greater rate of growth, as has been stated in the paragraph numbered 1. Yet on this moderate supposition of an increased growth of only 6 or 7 per cent, a percentage which would be looked upon by any expert as showing a normal, healthy increase, there would be an extra cost, under the circumstances assumed, of about \$250,000 in reduced dividends. But this is only the beginning. The next year we may suppose the paid-for business increased

to \$170,000,000, just about 6 per cent, and that the same amount of increase \$10,000,000 per annum, is continued for the future, the percentages on the increasing total showing, accordingly, a gradual decrease. The expense of these increases above the \$150,000,000 limit would rise rapidly, that of 1913 costing about \$500,000, that of 1914 about \$750,000, and so on. In the long run this increase of expense would perhaps be repaid to those who happened to be members ten or twenty years hence, such repayment being at the expense of the present members. Business is not now profitable until after long years. If in any year a certain amount of business is bought and paid for, the next year there is some small return, chiefly in savings upon the expected mortality of that block of business. In this company the renewal commissions and the dividends are not quite taken care of from the loadings. After the cessation of renewal commissions there is some tangible profit to the company to go toward repaying the first cost and compound interest thereon. Formerly, large profits were made from lapses, but such profits have gradually been dried up, the competition between the companies in regard to granting surrender values having reached the extreme limit. It was otherwise before 1899, and especially so before 1868. At that time for years this company was under no expense whatever, the profits on lapses defraying the entire expense of a rapidly increasing business. In various ways the business has been progressively liberalized, usually followed by some reduction of dividends, but I am digressing from my argument. I ought to explain that the cost of new business, less loadings, which I have stated at \$250,000 for \$10,000,000 of insurance, includes in the first place the marginal expenses which in 1909 came to very nearly \$200,000. By marginal expenses I mean those items limited by law—namely, the compensation of solicitors actually engaged in writing applications for insurance and of medical examiners. Every year we make up an account of the other, or extra-marginal expenses connected with new business, distinct from the marginal expenses and also distinct from those necessary expenses which the company would have to meet if it did nothing except care for policies already in existence. The extra-marginal expenses

in 1909 came to about \$1,500,000, of which the assigned proportion on \$10,000,000 would be \$150,000. I consider the estimate named for both items of new business, \$330,000, to be within the mark, less \$80,000 for loadings.

6. Increased dividends diminish lapsing, thereby causing a still further increase in dividends. Lapses being no longer profitable, bring little book profit at present, the amount now being hardly worth speaking of. On the contrary, each policy holder who drops his policy, by that act causes a serious loss to the company, which must be made good by getting a new policy on some one else. Also, every premium contributes to the company's expense fund, and when a lapse occurs the contribution of that policy ceases. The company's expenses remaining practically unchanged, the defection of each delinquent member necessarily increases the proportion of expense chargeable to each member remaining, which means the corresponding reduction of dividends. Every policyholder discovers sooner or later whether or not his dividend is satisfactory. If he has no other policy he hears from some neighbor, or from the agent of some other company, whether the dividend which he receives annually is or is not as large as it ought to be. If, as is now frequently the case, he has policies in two or more companies, comparison shows which company does the better for him. If for any cause one policy must be dropped the decision is against the company in which he finds his investment the least profitable. A decision is made silently and without appeal. The hard-hearted policyholder does not care whether the company is or is not striving to increase its annual business in order to spread more widely the blessings of life insurance. Lapses not due to necessity sometimes occur from other causes than small dividends, such as a misunderstanding

with an agent, or a representation by a rival agent, but the main cause is notorious, dividends which have been weighed in the balances and found wanting. There are still a number of companies whose dividends exceed our own on policies recently issued, although no company equals ours in average annual dividends, taking all premium-paying policies together, old and new. Our dividends even in the exceptional cases are not now much found fault with, lapses from this cause having been greatly reduced; but whatever loss there is will be prevented by the limitation rule. In the absence of this rule, supposing the business were to keep on growing and the dividends were to consequently fall off somewhat, there would be a consequent increase in the proportion of lapsing.

7. Under limitation the quality of our risks will be improved, thus again adding to the dividends. In 1907 our losses by death were 85 per cent of those expected by the mortality tables; in 1908 they were 78 per cent, and in 1909 they were 76 per cent. There have been wide fluctuations from year to year in the past, the percentages ranging from 73 per cent to 93 per cent. In a table before me giving the percentages of mortality in various companies during the decade preceding 1909, and adding to them the figures for 1909, the averages of the percentages for this company is very nearly 80, while that of the Northwestern for the same period of eleven years is exactly 18 per cent lower. The "expected mortality" for this company in 1909 was \$16,728,282. If we had saved 18 per cent of this amount the profit would have been a little more than \$3,000,000 for the year 1909 alone, although some deduction must be made from this estimate in the comparison by way of allowance for the more rapid rate of growth of the Northwestern. The actual percentages for the year 1909, instead of the average of eleven years, were

76.51 per cent for the Mutual Life and 53.78 per cent for the Northwestern. The Provident Life and Trust is a well known company, and this and some others not so well known show average percentages for the eleven years still better than the Northwestern. It is, in fact, impossible to exaggerate the importance to be attached to the item known as "saving from death losses" in discussing the capacity of any company to provide the best dividends. Unfortunately, this element of good management is the work of many years. The various improvements in the average quality of risks in force which have been recently effected will, if steadily persevered in for years, tell gradually but surely as time goes on. Improvements still to be made are largely dependent on the prospective limitation of new business.

8. Still further economies are practicable under limitation, which will again add to the dividends. It has been the case in the past, and it is still true to a certain extent, that the most distant fields produce on the average the worst risks without involving a lesser expense, to put the case mildly. Curtailment in such cases will be dependent on a careful consideration of all the facts. Other savings will be made as time goes on for the benefit of the dividend fund.

9. Under the limitation discord concerning the main object of the company's organization cannot arise. In every growing company one or more of the officers will naturally consider the matter of dividends paramount, while others will prefer the further growth of the business. Some progressive company may possibly have a regulation fixing beforehand the amount of growth each year, but if so such a regulation, apart from the wide limits imposed by the New York law, is unknown to me. In this company there has been entire harmony on this question, the object of all concerned being to increase the new business as fast as may be, with due regard to other points, until the limit is reached, and thereafter to abide by the limitation. In default of any such regulation, the tendency must be toward unwise expenditure or perhaps equally unwise parsimony. I have known of companies in which the superintendent of agencies has been positively cowed by a conservative President. Such cases, however, are few in comparison with those in which the superintendent has been given undue latitude. In either case there must be others in the same company holding opposite views—a situation productive of friction and heartburning. This company has happily been free from any question of the kind, and under the limitation the same freedom from friction will be automatically preserved throughout the future. Apart from any question of internal harmony, it is difficult to overrate the feeling of satisfaction which pervades every department of this office since the cessation of rivalry with other companies. Just now the new business of the Equitable and the Northwestern runs neck and neck beside our own, no one being able to tell which of the three companies may be ahead at the end of the year. The matter would have only a languid interest for this

company under the limitation. If there were no limitation I can imagine not only a quickening of interest, but also some effort involving extra expense. In short, a spirit of competition, not necessarily unhealthy, might again be aroused, and if aroused that spirit, under new officers, might in time be carried to great lengths.

10. A limitation is just, because the dividends belong to the policyholders, who own the company and who are the company. If the present policyholders were all trained actuaries and could each register his vote coolly and disinterestedly on the question now before us their decision would be unanimous. I do not mean that this or any other question should be decided by a referendum, because a representative body like this board should act according to its own best judgment in the permanent interests of the policyholders whom they represent. Years ago, even after the close of the golden age, the cost of new business was smaller, and the profits from lapses were larger than at present, so that, allowing for compound interest, a company recouped its expenses in so short a time that there was no conflict worth speaking of between the highest dividends and a fair rate of expansion. Those days have gone by forever. The present policyholders of this company, in view of the circumstances which I have recited, are entitled to the highest possible dividends, and these can be obtained in no other way. Under the limitation every motive will converge toward the one object of making and keeping this company's annual dividends eventually so large as to be beyond the possibility of comparison.

* * *

The Armstrong Report.

At the beginning of 1906 the Armstrong committee made its memorable report, of which the part relating to the limitation of business was not the least important. I quote a few sentences: "The business of the Mutual, Equitable and the New York Life has grown beyond reasonable limits. Notwithstanding the fact that they have

long since passed the point where further enlargement can benefit their policyholders, they have resorted to every effort to obtain new business regardless of the expense, which is reflected in diminishing dividends." "Much has been due to pride of growth and zeal for impressive totals, while the huge accumulations of the companies and the great responsibilities involved in their management have furnished pretexts for increased salaries and extravagant administrations." "The growth of the three companies has long been a matter of grave concern to students of insurance conditions. No useful purpose will be served by their becoming larger. Their membership is so large and their resources are so vast as to make the question of responsible control and conservative management one of extreme difficulty, and their magnitude if permitted to grow unrestricted will soon become a serious menace to the community." The committee, in fact, summed up in the few sentences which I have quoted the main reasons for a definite limitation of the business of the largest companies—namely, the diminishing dividends and the temptation to undue expenditure, not to speak of rivalry for size, which was aptly referred to by Mr. Alexander on one occasion as "the same old hell."

In January, 1909, in the course of an article of your own which appeared in the "New York Herald," you (President Peabody) gave your views on the reform legislation of 1906, with criticisms where criticism was needed, and as it was almost the only thing which appeared in print on that side of the question, it attracted considerable attention. It is especially worthy of remark that with one exception the past and present Presidents of the great companies—namely, Messrs. Hyde, Alexander and Morton in the Equitable; Beers and McCall in the New York Life, and McCurdy, Cromwell and Peabody in the Mutual Life—have each and all, upon occasion, expressed approval of the legal limitation of their business. Differing as they did in the forms of their state-

ments, in the earnestness of their views and in the character of the arguments which appealed to them, the fact remains remarkable that each one of those leaders has felt the grave responsibilities attending the management of these great corporations, and has approved this dignified method of bringing their historic rivalry to an orderly close.

It is said by the opponents of limitation that a company which stands still must go backward. Any such statement is meaningless except in this respect, that it is feared by some who disapprove the late law that if it had not been repealed the agents would lose their enthusiasm and the managers in charge of agencies would find their occupation gone. I have already shown that each individual agent will find everything to encourage him; and as regards the managers, they will be crowded as heretofore with all the multifarious cares of a still growing business. After the limit is reached, whenever that may be, we shall have \$150,000,000 of annual business to look forward to, a larger amount than has been done of late years by any company, while the volume of risks in force will necessarily go on increasing, until \$2,000,000,000, possibly even \$3,000,000,000, is arrived at in the long future, in place of the \$1,500,000,000 which we have yet to reach.

Chronicle Paragraphs

IT IS announced that Ferris E. Shaw, Vice-President of the United Insurance Company of Arizona, and who was expected to be eventually the President of the United Fire of New York, is about to sever connection with the parent company. The New York company—one of the divisions of the head office—was to have a capital of \$200,000 with surplus of \$800,000. Indications, after the report of the New York Insurance Department, point to an abandonment of the great general scheme of \$10,000,000, with \$40,000,000 surplus.

* * *

Especially as relating to the interests of the Liverpool and London and Globe Insurance Company, the annual meeting of the managers of that company for the United States and Canada was held recently in San Francisco. At that conference were Managers H. W. Eaton, of the New York office; W. S. Warren, Chicago; Charles D. Haven, San Francisco; J. Gardiner Thompson, Montreal, and J. G. Pepper, of the New Orleans office.

* * *

Through the office of Fred S. James & Co. the Liverpool-Victoria Insurance Corporation (Ltd.), of London, England, is writing surplus lines. The cash capital of the company will shortly be increased to more than \$500,000.

* * *

At Olympia, Wash., incorporation papers have been filed for the Pacific State Fire Insurance Company, with a proposed capital and surplus of \$500,000 each. It is understood that large and responsible moneyed interests are behind the new company.

* * *

Efforts are being made through the courts to dissolve the Board of Fire Underwriters of Pittsburg.

* * *

The New York Insurance Department is now examining the Hamilton Fire Insurance Company.

* * *

Fire losses in the United States for October footed up higher than for many years for the same month. In fact, it was the heaviest monthly record of fire damage which has been chronicled since the conflagration at San Francisco in April, 1906. A large portion of this fire waste was due to the destructive forest fires which also burned up buildings and contents.

* * *

Henry E. Hess, Vice-President of the Fidelity-Phenix Fire Insurance Company, has resigned. The news came rather as a surprise, because it was thought that his long and most efficient work as manager of the New York Fire Insurance Exchange would, as an officer of a large American company, give him not only a

rest from the intricate and trying duties of Exchange labors, but also provide a lasting position for him commensurate with his peculiarly strong abilities as an experienced underwriter and thorough organizer, thereby giving him an opportunity for a broader field. For many years he has been a sufferer from internal troubles, and this fact has undoubtedly hastened his resignation.

* * *

Fester, Douglas & Folsom have been appointed United States managers of the Second Russian Reinsurance Company. The deposit will be made in Connecticut.

* * *

There is a current report that efforts will be made during the next session of the New York State Legislature to introduce a measure providing for a review of the rulings of the New York Fire Insurance Exchange. This applies to cases where there occurs a clash between the assured, the broker and the Exchange. It is proposed to provide a means by which appeals from its rulings can be arranged for.

* * *

Assemblyman James J. Hoey, who is also an insurance broker and connected with the firm of the John F. Curry Company, has indicated that he will introduce a bill for licensing insurance brokers under State laws. Almost every year during the last five this same subject has come up in one way or another, either for general discussion or before the Legislature, yet this is the first time it has appeared at all possible that the question of State licensing of fire insurance brokers will be brought up for serious consideration by the Legislature of New York State. With this proposed bill will go the feature of bonding. At present some 8,000 names are certified by the New York Fire Insurance Exchange at \$10 each as an annual charge for the privilege of conducting brokerage business. In this regard attention is directed to remarks in THE CHRONICLE in the issue of September 1.

* * *

The Washington Life Insurance Company of Washington, D. C., was incorporated recently. Its capital is \$100,000 and the proposed surplus is of nearly equal amount. Officers elected are J. Grier Long, President, and B. C. Barrington, Secretary and general manager.

* * *

At the meeting to-day of the Plate Glass Underwriters' Association, held at the office of the New Amsterdam Casualty Company, there will be several important matters brought up. Among these will be the report of the special committee, and some plan discussed for tabulating experience,

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.
 Large surrender values.
 Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

Table of Contents.

Single Premiums, Pure Endowment.
Accumulations, Pure Endowment.
Forborne Immediate Annuities.
Accumulated Temporary Insurances.
Accumulated Increasing Insurance.
Single Premiums Endowment Insurance.
Single Premiums Temporary Insurance.
Immediate Temporary Annuities.
Valuation Columns.

SELECT AND ULTIMATE VALUES.

Single Premiums, Whole Life.
Life Annuities.
Terminal Reserves, Life, Limited Payment Endowment.
Mean Reserves, Life, Limited Payment, Endowment.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

- Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
- Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities. For these purposes the "select and ultimate" will be most useful.
- Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
- Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
- Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
- Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
- Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
- Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
- Warranted Commissions for New Business.
- Surrender Values.
- Dividends.

Insurance Against Unemployment

By Arthur Rhys Barrand, F. I. A.

An Address Delivered Under the Auspices of the Permanent International Committee on Social Insurances at The Hague.

THE subject of insurance against unemployment is a very difficult one to deal with, presenting, as it does, many features not found in other forms of social insurance, such as insurance against sickness and provision for old age. These difficulties arise from the absence of and the practical impossibility of obtaining reliable statistics upon which calculations as to the cost of such a system of insurance can be based; from the great differences in extent of unemployment and capacity to contribute to the cost of insurance which exist in various occupations; from the apparently well-nigh insuperable difficulties in the way of an adequate system of supervision for the prevention of fraud; and the almost equally difficult problem of the organization of the great mass of unskilled and casual labor for the purposes of such a system of insurance, a problem which must be solved if the system is to meet the real need of the country, and which, I believe, has hardly been touched by the unemployment insurance schemes that have been adopted in various countries and municipalities abroad.

The aspect of the subject to which attention is specially directed in the programme of the congress is, however, not the advisability, the possibility, or the practicability of a scheme of unemployment insurance, nor even the conditions or regulations under which such a scheme could be carried into effect. The programme, as I understand it, postulates the practicability of a national system of insurance against unemployment, and calls for a discussion of the much more limited question as to whether it would be advantageous and practicable to combine such a system with other forms

of social insurance, such as those against sickness, against accidents and against incapacity due to invalidity and old age. Before, however, proceeding to consider this aspect of the subject, it may be as well to call attention to some of the difficulties which beset any scheme of unemployment insurance, and to suggest some of the conditions which must be fulfilled if such a scheme is to solve successfully this portion of the social problem of unemployment.

It should, perhaps, be noted at the outset that unemployment insurance has, strictly speaking, nothing to do with the causes of unemployment, or with methods of removing those causes. Just as life assurance is concerned with the expected rate of mortality, rather than with medical and sanitary considerations which may affect that rate, and adjusts the premium charged to the rate of mortality, be it light or heavy, so unemployment insurance, considered strictly by itself, has only to do with the rate of unemployment likely to be experienced in the future, the cost of the insurance as indicated by that rate, and the methods by which such a system of insurance can be carried on with the maximum of efficiency and the minimum of expense. It is not, however, safe to press this comparison between life assurance and unemployment insurance too far, for whereas the rate of mortality with which the former is concerned is not subject to sudden and violent fluctuations, and, moreover, may be said to be largely independent of human volition, and changes only slowly and over long periods, the rate of unemployment is affected by many temporary and incalculable causes, and is influenced to a considerable extent by the vagaries of human nature. It is probable also that unemployment insurance, when

actually in existence on a large scale, will exhibit a phenomenon practically unknown in life assurance, but familiar to those who have had experience of workmen's compensation and sickness insurance—namely, that the introduction of the benefit increases the apparent rate of disability, and so tends to vitiate the statistics on which the calculation of the benefit was based. Moreover, some of the agencies to be employed for dealing with the problem are so closely associated with the rate of unemployment, and are so likely to affect it, that they can hardly be disregarded; indeed, one of those agencies, the Labor Exchange, must necessarily have so intimate a connection with any system of unemployment insurance as to form an actual part of the scheme. It is, therefore, difficult and, indeed, unsafe, to carry the analogy between life assurance and unemployment insurance too far in this direction, but, having called attention to the caution to be observed in the application of the principle, I propose to confine the few remarks I have to make on unemployment insurance in general to the insurance aspect rather than to consider the wider social aspects of the subject.

First.—The scheme to be adopted should embrace the whole body of workers in the community, whatever the nature or characteristics of their occupation, who may be said to be subject to any appreciable extent, to the risk of unemployment. Thus it must include organized and unorganized labor, skilled and unskilled, regular and seasonal, and, above all, the great body of casual and partly employed workers, who have been excluded in too many existing schemes, but who stand in the greatest need of such assistance and protection.

Second.—To be of any real assist-

ance in solving the problem of alleviating the distress and suffering caused by unemployment, the scheme adopted must provide a benefit, the minimum rate of which for those without dependents cannot be less than 5s. per week, rising by 1s. per week for each dependent to a maximum of 10s. per week for any number of dependents exceeding four. The rate named is a very low one, and is less than that given in many cases by local systems now or recently in force in different parts of the Continent of Europe, and is considerably less than most of the unemployment benefits paid in the United States of America. I am assured, however, by those in a position to speak authoritatively for the working classes, that the benefit referred to would go a very long way toward meeting the difficulty.

Third—The cost of such a scheme of insurance should be met by contributions from (a) all workers entitled to benefit under the scheme; (b) all employers of workers so entitled; (c) the State. In some countries and districts where unemployment insurance has been or is being tried, arrangements have been made for the local authority to contribute also. I understand, however, that this has not proved successful, and in any event it would hardly be practicable in the United Kingdom, where in most districts, and particularly in those likely to be affected by such a scheme as this, local expenditure is already very heavy, and where there is a strongly marked agitation in favor of shifting some portion of the present local burden on to the State.

Fourth—As to the rate of contribution, it is somewhat hazardous to fix the amount in the absence of statistics showing the rate of unemployment of workers as a whole, including all classes; but, if I may venture to suggest a rate to provide the benefits referred to in (2), I would suggest that both employer and employed should contribute $2\frac{1}{2}$ per cent—i. e., 6d. in the pound, of all wages paid to those entitled to benefit under the scheme, such contribution, so far as the worker is concerned, to be deducted from all wages paid to him, and accounted for, together with his own contribution, by the employer to the local insurance authority. The State's contribution will then, of course, be the difference between the amount of the combined contributions and the cost of the insurance. The worker's contribution being paid in the form of a deduction from his wages, it follows that no contribution will be required from him during unemployment, and that he will run no risk of loss of benefit through failure to pay his contribution. If it is proposed to give a uniform benefit, irrespective of the wages earned and amount contributed, it may be necessary to limit the worker's contribution to 6d. only in any one week, leaving him, if he is able and so inclined,

to make private arrangements for a supplement to the insurance grant through a trade union or friendly society.

Fifth—The question as to whether a partially employed worker should be entitled to benefit under the scheme is a very difficult one, but I think that, provided the methods of supervision are adequate, a worker should be encouraged to take even partial employment, and that so long as by such employment he was not earning more than half his usual wages when in full employment he should receive full employment benefit, with reduced benefit when earning more than half his normal wages. It would, however, be necessary, in all probability, to stipulate that he should not accept less than the current rate per hour, as otherwise the receipt of unemployment benefit would enable the employer to pay a lower rate of wages, the difference between the normal rate and that actually paid coming in reality out of the insurance fund.

Sixth—Closely associated with the question of partial employment is that of private income. A certain amount of this, say, not exceeding 10s. a week, should not interfere in any way with the unemployment benefit, but above that amount the benefit should be reduced in proportion to such income, and, where the private income amounts to £1 a week or over, no unemployment benefit should be paid. It may be possible and advisable, however, to make no reduction in the unemployment benefit where the private income, whatever its amount, is due to the provision made by the worker himself through a friendly society or trade union.

Seventh—Adequate machinery must exist for compelling a worker to accept any suitable work that may be offered him. The term "suitable work" should certainly not be confined to a man's own trade, or even to a trade closely associated to it. I think the only qualification should be that no unemployed worker should be compelled to accept work that would be likely to unfit him for subsequently working at his own trade.

Eighth—Any scheme of unemployment insurance should be worked in connection with a system of labor bureaus, and it should be a necessary preliminary condition to the receipt of any benefit under the scheme that the unemployed worker shall have registered at the local bureau. It will also be necessary to insist that he shall report himself there at least once a day so long as he is receiving benefit.

Ninth—Any unemployment insurance scheme will probably prove worse than useless unless accompanied by an adequate system of supervision for the prevention of fraud. The two main sources from which improper claims will arise are: (a) those

who could find work, but are work-shy; (b) those who are working, but pretend that they are not. Both of these classes must be prevented from receiving any benefit from the fund, and, in addition, it may be necessary to interfere with those who are spending any portion of unemployment benefit in drink or gambling. In this latter case, to stop the benefit altogether would press very hardly on the man's dependents, and it would probably be advisable to give the benefit in kind direct to the dependents, if there be any, only forfeiting the benefit entirely where the man has no dependents.

Tenth—No benefit should be payable under the scheme in respect of the first few days of unemployment, say for the first week. This provision would greatly lessen the cost of the scheme, and would not impose an undue hardship on the workers.

Eleventh—The difficult question of unemployment caused by a strike or lockout cannot be passed over without remark. Most systems of unemployment insurance provide that no benefit shall be payable in such cases, but such a provision hardly deals fairly with the problem. A better method of meeting the difficulty is to provide a permanent tribunal of arbitration for dealing with such trade disputes, and only to withhold unemployment benefit when the workers have declined to accept work on the terms which such a tribunal decides to be fair and reasonable.

Twelfth—It seems probable that any scheme, to have a reasonable chance of success, must be compulsory. In that case it is necessary to consider what limitation, if any, should be imposed on the class of workers to be included in the scheme. If membership, and therefore contribution, is to be compulsory, it is manifestly unfair to include those who run little risk of unemployment, and have consequently little chance of benefitting. There should, therefore, be excluded from the compulsory part of the scheme those en-

In New England

BOSTON, Nov. 16.—The report of the examiner of the Massachusetts Insurance Department upon the result of the triennial examination of the John Hancock Mutual Life Insurance Company, which has just been filed, shows the usual excellence of results achieved by that company. A rigid examination was made of the affairs of the company and its general methods of transacting business, and the report which was rendered early in the year to the policyholders by the management of the company was verified, the figures as of December 31, 1909, being as follows:

Assets	\$64,945,609.73
Liabilities (including policy reserve)	58,786,457.50
Unassigned funds	6,027,956.93

The accounts of the company were found to have been accurately kept and the system of caring for collection of premiums and interest and payment of claims was commended.

In summarizing his report the examiner took occasion to call attention to a very important phase of the business by special reference to the reserve accumulations held to the credit of the weekly premium policies.

Attention was called to the inadequacy of the mortality table as prescribed by the Massachusetts law in its measurement of the mortality among the industrial classes, the fact being brought out that this table of mortality, while adequate for treatment of the ordinary, or yearly premium, business, did not set a proper standard for the industrial or weekly premium business, the mortality of the weekly premium branch being in excess of the expectation by the mortality table prescribed.

The company has since the completion of the standard mortality table, so called, set aside in special liability an amount of funds sufficient to bring the reserve for several years

past up to the amount required by that table, which represents the actual mortality experience of the industrial companies in America, and is fortunate in that it has in its surplus reserve a strength that would enable it to go far toward complying with any requirement for increasing the reserve to the standard above referred to.

To Contest Receivership.

Proceedings for the appointment of a permanent receiver were instituted last Monday in the Superior Court at Providence, R. I., against L'Union St. Jean Baptiste d'Amerique, of Woonsocket, which, as noted in last week's CHRONICLE, was severely criticised in the report of a joint examination made by the New York and Massachusetts Insurance departments for irregularities in the conduct of its insurance business. The resignation of Supreme Secretary J. Adelard Caron, of Woonsocket and the appointment of a temporary receiver followed. The corporation is now cited to show cause why a permanent receiver should not be appointed on the petition of John B. Brindamour, a member of the Finance Committee which found deficits in the accounts of several of the supreme officers, and as both sides have engaged able counsel a stubborn legal contest is expected.

A movement has been started to hold a new convention to annul the proceedings at the last meeting at Manchester, N. H., at which supreme officers were elected.

It is also planned to change the headquarters from Woonsocket to Providence, Boston or Worcester.

New England Brevities.

The grand lodge of Connecticut, Ancient Order of United Workmen, has brought suit in the Superior Court of Massachusetts against the grand lodge of that order in Massachusetts to recover a judgment of \$25,111.3, which was obtained against the defendant in the courts of Con-

necticut. The court in which the judgment was obtained was the outcome of the financial relations of the two bodies at the time of their separation in 1901.

* * *

Urban Parker, of the John C. Paige & Co. office, Boston, has been advanced to the position of chief counter man, following the assignment of Ernest B. Fletcher to outside work. Both are capable and popular gentlemen and have squarely earned their promotions.

* * *

La Nationale Fire Insurance Company of Paris, represented in the United States by Starkweather & Shepley, has applied for admission to Massachusetts.

* * *

A bill to authorize the Insurance Commissioner to change the form of fire policies from time to time, as the public good may require, has been introduced in the Vermont Legislature. A bill suggesting methods to reduce the Vermont fire loss ratio would be more to the purpose. On with the bureaucratic dance; let damphoolishness be unconfined!

* * *

It is now reported that the directors of the Puritan Life of Providence have turned down the offer of reinsurance said to have been made to that company.

* * *

Vermont, the home State of the American Fidelity of Montpelier, has authorized that company to write automobile property insurance, in addition to the original lines provided for in its charter.

* * *

The Berkshire Life will add two stories to its home office building in Pittsfield, Mass.

OBITUARY

John J. Henry.

John J. Henry, President of the Newark Fire Insurance Company, with which he had been connected in various capacities for forty years, died last Saturday at his home in Newark, N. J., of a complication of diseases. He was sixty-three years old. He was Treasurer of the Park Presbyterian Church and was active in fraternal, building and social organizations. He is survived by his wife and two children.

William Osgood Blaney.

William Osgood Blaney, Third Vice-President of the John Hancock Mutual Life Insurance Company, died at his home in Commonwealth Avenue, Boston, last Saturday at the age of 69 years. He was born in Bristol, Me., in 1841, and in 1869 became a member of the Boston Corn Exchange. Two years later the name of the exchange became the Boston Commercial Exchange, and in 1881 Mr. Blaney was elected President, serving until 1884. Later the Commercial Exchange became, in turn, the Chamber of Commerce, and he served as chairman on various committees. In 1900 he became President of the Commercial National Bank of Boston, after serving eight years as a director. He remained at the head of this bank until his death.

George Warren Hayes.

George Warren Hayes, for more than forty years prominent in fire insurance circles of this country, died at the home of his daughter, in Seattle, Wash., on Sunday in his seventy-third year. Mr. Hayes was born in Terre Haute, Ind., in April, 1838; graduated from Wabash College, Crawfordsville, in the class of '60, and had his army experience with the old 76th Indiana. In October, 1864, C. C. Hine appointed him a local agent at Waverly, Ill., and a year later Mr. Hayes entered the Illinois field as special agent for the Aetna. In May, 1874, he became special agent of the Franklin of Philadelphia for Illinois,

Wisconsin and Minnesota, and in May, 1879, manager at Milwaukee of the Northwestern department of the Western of Toronto. A similar department for the British America was added in January, 1893. In 1906 Mr. Hayes retired from active work on a pension for life from these companies. Mr. Hayes entered many young men in the insurance business and always took an active interest in the Illinois State Board of Fire Underwriters, of which he was at one time

Secretary. From 1877 to 1883 he was the Secretary of the Fire Underwriters' Association of the Northwest, and Vice-President of that association in 1901. His son, George Washburn Hayes, has for many years been connected with Benedict & Benedict, insurance brokers of this city, and is a member of the Executive Committee of the New York Credit Men's Association, and is also chairman of the Fire Insurance Committee of that association.

Adjustment Bureau Work

IN ITS annual report the General Adjustment Bureau reviews for the benefit of its stockholders and patrons the period from June 1, 1906, when the bureau actually started to handle losses to June 1, 1910.

Under the guidance of General Manager William J. Greer the bureau has steadily advanced in its usefulness, and for the last year of the period covered by the report it shows that 63 per cent of the companies involved in the losses handled by the bureau have made use of the facilities it offered, and that the average cost to its patrons for services, travelling expenses, appraisals, estimates, experts, etc., was only \$1.35 per \$100 of adjusted loss on losses for the four years aggregating \$22,193,367.

The General Adjustment Bureau now has eighty-five members, and the territory covered by its operations embraces the States of New York (except New York City), New Jersey, Pennsylvania, Delaware, Maryland, West Virginia and the District of Columbia. This field is divided into six departments under the supervision of able managers. These departments are designated as follows:

Head office, in New York City, covering New York State from Poughkeepsie south and Northern New Jersey from Trenton north, with Will-

iam J. Greer in direct charge of the field.

Pennsylvania department, east, covering Pennsylvania as far west as York, Harrisburg and Williamsport; Northern Delaware, including Wilmington and New Jersey south of Trenton, with John G. Monroe as manager.

Pennsylvania department, west, covering Western Pennsylvania, except five northern counties; Northern West Virginia and the City of Cumberland, Va., with Wilfred Garretson as manager.

New York State department, west, covering New York State west of Syracuse and the counties of Tioga, Potter, McKean, Warren and Erie in Northern Pennsylvania, with J. W. Williams as manager.

New York State department, east, covering the State north of Poughkeepsie and west to Syracuse, with Charles H. Hibbs as manager.

Maryland department, covering Maryland east of Cumberland, Southern West Virginia, Delaware south of Wilmington, the Cumberland Valley in Pennsylvania and the District of Columbia, with John F. Rice as manager.

When the General Adjustment Bureau first entered the field of the adjustment of fire losses it encountered many difficult problems, which were handled with such diplomacy and

ability by General Manager Greer that its progress soon became assured and the accessions of confidence are clearly demonstrated by the increase in the proportion of losses assigned to it for adjustment. The bureau in a little booklet covering its operations during the four years of its existence announces:

"It is the aim of the management to

cultivate the highest standard of efficiency, and to continue to illustrate by a reasonable and consistent reduction in cost, and in every other practical way, the advantages of co-operation and concentration in the adjustment of fire losses."

The present officers of the General Adjustment Bureau are: E. H. A. Correa, President; C. D. Dunlop, Vice-

President; William J. Greer, general manager; D. C. Brown, superintendent of adjustments; N. B. Bassett, Secretary.

The membership includes nearly all the prominent fire insurance companies operating in this part of the country and the bureau service is also extensively used by companies not affiliated as stockholders.

State Insurance Proposed on the Coast

A STATE industrial insurance department, paying specific benefits to injured workmen, is provided for in the tentative draft of an employers' liability bill as framed by the Washington Employers' Liability Commission, appointed several months ago by Governor Hay. Details of the proposed measure were made public following a meeting of the commission at Tacoma last week. The bill will be submitted to a number of prominent Washington attorneys, who will pass upon the points of law involved, but it is expected to show but few changes from its present form when presented to the next Washington Legislature for enactment.

The measure if enacted will eliminate liability insurance written by stock casualty companies in Washington. Attorneys of the class known as "ambulance chasers" will also find the State a poor field for operations. Ordinarily an injured worker will have no need for counsel, the exception being in case of an appeal from the Insurance Department. Then the court shall award a reasonable attorney's fee, in addition to the judgment rendered on the appeal.

The draft provides that employers shall be exempted from judgment for personal injuries by paying a premium into an insurance fund to be legally created. Every workman will be entitled to the benefits to be paid out of the fund, unless he desires otherwise and so informs his employer in writing.

All workmen and administrative officers employed in mines, factories and workshops where machinery is used; on wharves, dredges; in smelters, laundries, quarries, engineering works, logging and lumbering camps and mills where machinery is used, shall be insured under the provisions of the act.

Premiums are to be paid by both employer and employee. An employer under the act shall pay to the County Treasurer a certain premium based on the entire earnings of his employees. A workman shall pay to the County Treasurer through his employer, a stated sum, to be deducted from his wages. Workingmen are also to pay 50 cents a month through employers to the County Treasurer for first aid and a hospital fund. All premiums received from the employer and workman are to constitute an "accident fund."

It is provided that such insurance shall cover the risk of personal injury arising in the course of the employment and resulting in death or in disability. If a workman leaves a widow or children at the time of his death, a weekly payment shall be made his heirs equal to 75 per cent of his weekly wage, but not exceeding a total of \$4,000. Other provisions are made to fit other conditions of survivors.

The draft provides that the permanent total disability weekly payment shall be paid not to exceed the workman's wages for five years, or \$4,000 in all. Hospital benefits of \$5

a week and funeral benefits of \$75 are provided. The draft provides for the creation of a medical board, in the creation of which the workman shall have a voice.

THE GLASGOW MAY COME.

In a prospectus issued to the shareholders of the Glasgow Assurance Corporation, of Glasgow, Scotland, it is proposed to increase the capital stock £100,000. The reason for this additional strength is shown in that portion of the prospectus which reads thus:

"Following the policy adopted by such leading companies as the Royal Sun, Commercial Union, Atlas and Liverpool and London and Globe, the directors intend to make the business of the corporation, so far as possible, world wide. The great advantage of so doing is to make the company independent of the state of trade in any one country during any single year, experience having proved that insurance rarely suffers a bad year in more than one country at the same time."

From this it would appear that the Glasgow Assurance Company may enter the United States.

Workmen's Compensation in Great Britain

A REMARKABLE showing in regard to the profitability of the workmen's compensation departments of British companies writing employers' liability insurance is presented in the current issue of the "Post Magazine and Insurance Monitor," of London. In view of the significance of the statement for American underwriters, particularly in this State, the entire article, together with the elaborate table which appeared on another page of the same issue of the "Post Magazine," are given here:

"As will be seen from the following summary of the Board of Trade returns for the year 1909 filed by thirty-four tariff and twenty non-tariff companies, and from the table given on another page, the unsatisfactory features of workmen's compensation business have been maintained and accentuated. Our summaries of the totals in 1908 are added for comparison, although the offices represented are not identical:

TARIFF COMPANIES.					
	1908.			1909.	
	£	%		£	%
Claims	1,256,684	61.90		1,250,845	64.60
Commission ..	267,409	13.17		233,646	13.10
Expenses	463,338	22.93		437,985	22.62
	1,989,431	98.00		1,942,475	100.32
Profit margin or deficit...	40,799	2.00		6,151	— .32
Earned premiums	2,030,230	100.00		1,936,324	100.00

NON-TARIFF COMPANIES.					
	1908.			1909.	
	£	%		£	%
Claims	371,335	71.15		350,816	74.23
Commission ..	80,423	15.42		70,009	14.81
Expenses	120,801	23.16		106,042	22.43
	572,562	109.73		526,867	111.46
Deficit	60,780	— 9.73		54,189	— 11.46
Earned premiums	621,782	100.00		472,678	100.00

TOTAL.					
	1908.			1909.	
	£	%		£	%
Claims	1,628,019	63.80		1,601,661	66.49
Commission ..	347,835	13.63		323,654	13.43
Expenses	586,139	22.97		544,027	22.58
	2,561,993	100.40		2,469,342	102.50
Deficit	9,981	— .40		60,340	— 2.50
Earned premiums	2,552,012	100.00		2,409,002	100.00

"It would seem from these figures that inadequate provision has been made in the rates of premium for the tendency of claims for industrial accidents to increase in number and in cost. This tendency, although well recognized in theory, is in practice usually disregarded. Only when companies have lost money does the need for substantial rates appear to be realized. The increase then obtainable is generally inadequate to repair the inroads on the funds, and the best

that can be done is to make a hand-to-mouth provision for the immediate future. Two features are obvious, one the extreme difficulty of fixing rates with such exactitude that no safety margin for untoward contingencies is requisite, the other that a loading of 40 per cent is too narrow to allow for expenses and profit. We are inclined to think that the fact that fire insurance is usually conducted at an expense ratio of about 35 per cent has been allowed

to obscure the greater frequency of claims received in workmen's compensation insurance for a like number of policies and probably for a like amount in premiums. On earned premiums of £1,936,324 the tariff companies record the receipt during the year of 1,661 notices of fatal and 143,942 notices of non-fatal accidents, together with 145,603 notices, or over

75 notices for every £1,000 of premium, entailing a considerable outgo presumably not capable of strict allocation to the expense of claim settlement. We have no means of comparing this with the experience in fire insurance, but the point appears likely to repay investigation and consideration.

"We venture to doubt whether in

some instances the Workmen's Compensation Department, if made absolutely self-dependent, instead of being partially subsidized, would not show even less satisfactory results. There can, perhaps, be no objection to allowing one department to pay for another as long as the public are con-

(Continued on Page 11.)

EMPLOYERS' LIABILITY INSURANCE BUSINESS OF BRITISH COMPANIES IN 1909.

The object of the following table, referred to in our leader columns, is to set forth the profit results accruing from the employers' liability insurance business transacted in this country during 1909, and in the majority of cases the figures relate to accounts covering the twelve months to 31st December last. The arrangement is in all respects identical with that adopted in regard to the 1908 business, which was analysed in our issues of 25th December, 1909, and 8th January

following. The figures in Column 2 represent the net premiums brought into account, increased by the unearned premiums (or reserve for unexpired risks) at the end of the previous year, and diminished by the corresponding amount at the end of the year of account. No regulation has been laid down as to the proportions of this unearned premium reserve, and Column 11 has accordingly been added, showing what percentage of the premiums reported is represented by such reserve at the

end of the year of account. The figures in Column 3 represent the scheduled item—"Payments under policies, including medical and legal expenses in connection therewith, after deduction of sums re-insured," increased by the amount reserved for claims outstanding at the end of the year, and diminished by that brought forward from the previous year. Columns 9 and 10 show the margin of profit or (where a minus sign appears) loss.

Mortgage Clause in Standard Policies

THE Appellate Division of the New York Supreme Court has handed down a decision of considerable importance in regard to the rights of the mortgagee under a mortgage clause attached to a standard fire policy. The decision in effect says that there is no obligation upon the mortgagee to do anything whatever in the way of making a claim against the company except to bring action at any time within six years and recover, and this without any prior notice whatever to the company of any loss claim. The decision was rendered in the case of the appeal of Simon Heilbrun vs. German Alliance Insurance Company, from an order sustaining a demurrer of the complaint. Jacob R. Schiff appeared for the appellant and Leo Levy and Arthur Levy for the respondent. Judge Scott wrote the opinion, with Judges Ingraham, McLaughlin and Clarke concurring. Judge Scott said:

"The action is upon a policy of fire insurance issued by defendant to one Cecelia M. Siff, to cover loss by fire to a specified building. The plaintiff's assignor held a mortgage upon the insured building, and there was attached to the policy a mortgage clause, which, as the demurrer admits, provided that the loss or damages, if any, to the premises insured should

be payable to Henry Gerken, mortgagee as interest might appear, and further provided that the insurance as to the interest of the said mortgagee therein should not be invalidated by any act or neglect of the mortgagor or owner of the property described therein, nor by any change in the title or ownership of the property. The complaint alleges the fire on the premises and the amount of loss resulting therefrom; the other insurances on the property and the proportion of the loss which defendant is liable for under its said policy. The complaint does not allege that the insured or Gerken, the mortgagee, or plaintiff, as assignee of the latter, had ever served notice of the loss or proofs of loss upon defendant, and the demurrer for general insufficiency is directed especially to this omission.

"The decision below rested upon the proposition that the plaintiff's assignor, although only a mortgagee, was bound as a condition precedent to a recovery, to allege and prove that he or the mortgagor had within the time prescribed by the policy given to the defendant notice of the loss and furnished proofs of loss. Whether or not such an obligation rested upon the mortgagee is the crucial question involved in this appeal. The question has never been directly passed upon in this State, and in other jurisdictions there are decisions both ways. In the present case the complaint does not undertake to set forth either the insurance policy or the mortgagee clause in their precise words. We must assume, therefore, that the policy was in the standard form, which alone can be lawfully issued in this State, and that the mortgagee clause is substantially in the form set forth in the complaint and admitted by the demurrer, to wit, that it provides that the insurance as to the interest of the said mortgagee therein shall not be invalidated by any act or neglect of the mortgagor or owner of the property described therein. The effect of such a clause has long been settled in this State. It created a new and distinct contract, which places the mortgagee upon another and a different footing from that of a mere assignee or appointee to receive the loss, and removes him beyond the control or effect of any act or neglect of the owner of the property, and renders such mortgagee a party who has a distinct interest separate from the owner, embraced in another and a separate contract.

"The interests of the owner and of the mortgagee are regarded as distinct subjects of insurance. As was said by Rapallo, J.: 'I think that the intent of the clause was to make the policy operate as an insurance of the mortgagors and the mortgagees separately, and to give the mortgagees

the same benefit as if they had taken out a separate policy, free from the conditions imposed upon the owners, making the mortgagees responsible only for their own acts' (Hastings vs. Westchester Fire Insurance Co., 73 N. Y., 141). Considering the contracts with the owner and the mortgagee as separate contracts in which each is subject only to the obligation expressly imposed upon him we must next turn to the standard form of fire insurance policy to ascertain what those obligations are.

"That form of policy was devised with the greatest care and constitutes the only lawful form of policy which may be issued in this State. Its conditions are plainly expressed in numbered lines. Lines 56 to 59 inclusive state distinctly what conditions and obligations apply to and rest upon a mortgagee, as follows: 'If with the consent of the company an interest under this policy shall exist in favor

of a mortgagee, or of any person or corporation having an interest in the subject of insurance other than the interest of the insured as expressed herein, the conditions hereinbefore contained shall apply in the manner expressed in such provisions and conditions of insurance relating to such interest as shall be written upon, attached or appended hereto.' The use of the word 'hereinbefore' in the above clause is most significant, and when we come to consider the nature of the conditions which precede the clause, and those which follow after it the significance of its language and its location in the policy becomes absolutely controlling. Lines 7 to 55, preceding the mortgage clause, refer to acts done by the insured prior to the issuance of the policy, or to certain contingencies under which the insurer will be liable to no one, as, for instance, if a loss occurs by reason of invasion, insurrection, riot, etc.

"Lines 60 to 112, on the other hand, which follow after the above quoted mortgage clause, refer wholly to conditions to be complied with by the insured after a loss has occurred. Many of these obligations thus imposed upon the owner relate to matters concerning which a mortgagee is not to be presumed to have knowledge or with which, in the nature of the case, he could not comply. Throughout the policy it is quite apparent that the 'insured' who is required to do certain things after a loss has occurred, does not include a mortgagee. The obligation imposed upon the insured by lines 60 to 112 of this policy are, therefore, by the very terms of the policy imposed upon the original insured person and not upon the mortgagee. This includes the giving of immediate notice of the loss, of which the mortgagee may be ignorant for a long time, and the furnishing of proofs of loss which the mortgagee may be quite unable to do, and by the neglect of the owner or mortgagee to do which it is expressly provided that the insurance as to the interest of the mortgagee shall not be invalidated. We are, therefore, of the opinion that the mortgagee was under

no obligation to furnish proof of loss, or to give any other or earlier notice of loss, than that involved in the commencement of this action. It was not, therefore, necessary to allege that he or the mortgagors had given such proofs of loss, or to set up an express waiver thereof by the insurer.

"It follows that the order appealed from must be reversed with \$10 costs and disbursements and the demurrer overruled with costs, with leave to defendant to withdraw the demurrer and answer within twenty days upon payment of such costs.—Ingraham, P.J., McLaughlin and Clarke, J.J., concur."

Judge Laughlin, in a dissenting opinion, pointed out the danger of the position taken by the majority of the court, saying:

"It scarcely needs reflection to realize that if a mortgagee may recover six years or more after the loss, without notice of the fire, proofs of loss or opportunity for arbitration, the door will be opened wide not only to fraudulent claims upon which the company will be victimized, for they will be helpless in many instances to defend themselves against dishonest claims, but also to collusion between owners and mortgagees."

Judge Laughlin's opinion is in part as follows: "I am of opinion that the standard mortgage clause under the New York standard policy of fire insurance does not relieve the mortgagee from giving notice of the fire, and furnishing proofs of loss to the insurance company, and affording it the benefit of the arbitration provision with respect to the amount of the loss and of the short statute of limitations of one year prescribed in the contract for bringing the action to recover the loss.

"Line 36 to 59 inclusive of the policy provide as follows: 'If, with the consent of this company, an interest under this policy shall exist in favor of a mortgagee or of any person or corporation having an interest in the subject of insurance other than the interest of the insured as described herein, the conditions hereinbefore contained shall apply in the manner expressed in such provisions

and conditions of insurance relating to such interest as shall be written upon, attached or appended hereto.'

"I do not agree with the construction that these provisions of the policy show a legislative intent or an intent on the part of the author that none of the subsequent provisions were to be applicable to the mortgagee. The preceding provisions, so far as they relate to acts of the owner, relate to matters and things existing, occurring, or that might occur, before the fire, with the exception of filing false proofs of loss by him and his participation in estimating the damages, while all of the succeeding provisions relate to matters and things occurring or required to be done, after the fire. By the lines quoted, which were evidently drafted before the clauses to be attached were prepared, it is plainly provided that the application of the preceding provisions to the mortgagee might be limited and defined by a slip or rider or indorsement on the policy, and as thus contemplated and pursuant to the statutes cited, three mortgagee clauses were prepared. One of the forms relates to policies in which the owner has no interest. The other two relate to policies requiring payment to the mortgagee 'as interest may appear,' and are alike with the exception that one limits the liability to a proportionate part of the loss in case of other insurance.

"In my opinion the only theory on which the liability of the company to the mortgagee without substantial compliance with these conditions precedent could be sustained is that the mortgagee clause alone constitutes the contract and that not only are all provisions succeeding lines 56 and 59 excluded, but also all preceding provisions that are not expressly continued by the mortgagee clause. Such a contention would be untenable. None of the provisions of the first six lines, which I have discussed and considered, are expressly continued by the mortgagee clause. Moreover, it is expressly provided in lines 31 to 35 inclusive, that the company shall not be liable for loss caused directly or indirectly 'by invasion, insurrection,

riot, civil war or commotion, or military or usurped power, or by order of any civil authority; * * * or * * * by explosion of any kind, or lightning; but liability for direct damage by lightning may be assumed by specific agreement hereon.' None of these provisions are expressly continued by the mortgagee clause, but could it be successfully or even seriously maintained that these provisions do not form part of the contract between the mortgagee and the insurance company? Is it reasonable to suppose that liability to mortgages was imposed upon the insurance companies by the Legislature, or voluntarily assumed by them for a loss arising from a cause expressly excluded from the risks assumed? It is also significant that these provisions are

not expressly limited to liability to the owner, but are general and relate to all liability under the policy. Likewise lines 36 and 37 provide, 'If a building or any part thereof fall, except as the result of fire, all insurance by this policy on such building or its contents shall immediately cease.' These provisions are not expressly continued by the mortgagee clause, but for the reasons already assigned I think that they constitute part of the contract with the mortgagee. There are other provisions preceding line 59 to which the same argument applies.

"Provisions rendering the policy void for misrepresentations on the part of the owner with respect to his interest in the property invalidates it also as to a mortgagee under the standard policy and mortgagee clause. (Genesee Falls Assn. vs. U. S. Fire Insurance Co., 16 App. Div., 587; see also Graham vs. Germania Ins. Co., 87 N. Y., 69). Now if I have succeeded in demonstrating that the provisions of the policy preceding line 59 which are neither expressly modified nor continued in force by the mortgagee clause constitute, so far as applicable, part of the contract of insurance with the mortgagee, then it follows logically, I think, that the provisions with respect to notice of the fire, proof of loss and arbitration likewise become part of that contract, for, although the specific requirement with respect to these things is contained in lines succeeding line 59, yet there are, as has been seen, in the first sentence of the policy, general provisions with respect thereto which in reality make them part of the very first provisions of the contract. The provisions with respect to notice of the fire, proof of loss, arbitration as to the damages, and fixing a short statute of limitations—of course, the question as to the statute of limitations is not presented by the demurrer—may fairly be said to be applicable to any claim made against the company under the policy, and without expressing an opinion as to whether the mortgagee is an insured within the contemplation of the contract, I am decidedly of opinion that the action cannot be maintained without alleging compliance by the owner with the requirements of the policy with respect to giving notice of the fire, filing proofs of loss and affording the company an opportunity to arbitrate the loss, or in default of compliance by the owner, such compliance in those respects on the part of the mortgagee as could be made in the exercise of due diligence and reasonable care. I am of opinion that the decision of the Court of Appeals in Eddy vs. London Assurance Corporation (supra), tends to sustain these views. There Judge Peckham, writing for the court, in deciding that the contract with the mortgagee is separate, said:

"By taking the insurance in the manner the mortgagee herein did, in-

stead of taking out a separate policy, all the provisions in the policy, which from their nature would properly apply to the case of an insurance of the mortgagee's interest would be regarded as forming part of the contract with him, while those provisions which antagonize or impair the force of the particular and specific provisions contained in the clause providing for the insurance of the mortgagee, must be regarded as ineffective and inapplicable to the case of the mortgagee.'

"The views expressed by the Court of Appeals in Hicks vs. British Am. Assn. Co. (supra), tend also to uphold the contention made in behalf of the insurance company. In that case Chief Judge Parker, writing for the court, pointed out that the purpose of requiring proofs of loss was to prevent the perpetration of fraud on the insurance companies. It scarcely needs reflection to realize that if a mortgagee may recover six years or more after the loss, without notice of the fire, proof of loss or opportunity for arbitration, the door will be opened wide, not only to fraudulent claims upon which the companies will be victimized, for they will be helpless in many instances to defend themselves against dishonest claims, but also to collusion between owners and mortgagees. I, therefore, vote for affirmance."

The matter will be taken to the Court of Appeals for its ultimate decision.

CITY LIABLE FOR EMPLOYEE.

The first damage suit brought against the City of New York under the Employers' Liability law resulted in a judgment for \$6,000 in favor of Mrs. Delia Lynch on Monday from a jury before Supreme Court Justice Brady. Mrs. Lynch's husband, John, was an employee of the Department of Sewers, and was drowned while trying to remove an obstruction in the sewer. The jury held the city responsible because Lynch's foreman did not take precautions for his protection.

A PHILIPPINE COMPANY.

The Insular Life Insurance Company (Limited) has been organized at Manila, P. I., with a capital of \$1,000,000 pesos, equivalent to \$500,000 gold. Leon Mooser, formerly of Sacramento, Cal., is managing director of the company. The Insular Life is the first Philippine life company, although several American and Chinese companies are operating in the islands. Among the former are the West Coast Life of San Francisco and the New York Life.

WORKMEN'S COMPENSATION.

(Continued from Page 7.)

tent to have it so, yet there would seem to be no reason why a business involving the collection of over £2,400,000 in premiums should not at least be self-supporting.

"Some of the unsatisfactory experience of the last year is due to inadequate provision made a year ago for claims which arose prior to the end of 1908:

The reserves brought forward by tariff companies from 1908 for claims in 1904-05-06-07 and 1908 amounted to £703,657

There has been paid in respect thereof in 1909..... £520,455
And reserved at the end of 1909 322,044

£842,499

Leaving a deficiency of.. 138,842

£703,657

"This deficiency of £138,842 represents over 11 per cent of the claims of £1,250,845, nearly 19¼ per cent of the reserves of £703,657, and is, in fact, 7.17 per cent of the earned premiums of £1,936,324. It is important as indicating the existence of a form of postponed liability which may press with increasing weight on future years as the liabilities of the past accumulate.

"It is interesting to notice that the majority of the offices have been at fault in their estimates made a year ago. The following summary will help to make this clear:

"Number of offices whose reserves at 1908 were:

Year	1904	1905	1906	1907	1908
In deficit...	11	9	11	15	29
In excess...	4	4	4	7	3

"It is inconceivable that the companies should have wilfully underestimated their liabilities or should all have been misled by the facts before them when their estimates were made, and we may fairly infer that in most cases fresh developments have arisen which could not have been foreseen, while it is, of course, possible that the addition to the reserves at the end of the year of account may have been made for the purpose of strengthening the position and may be more than is actually required. Our comments in this respect are limited to the returns of the tariff offices, for the reason that complete returns of the non-tariff companies have not yet reached us.

"The following summaries formed by grouping the premium incomes of the offices according to the percentages of claims on premiums show how small a proportion of the busi-

ness is done at a favorable claim ratio:

TARIFF OFFICES.			
1908.

23,564	4.52	30,209	128.25
521,782	100.00	371,336	71.15

1909.			
Premiums earned.	% of total volume.	Claims.	% of Claims on premiums.
£ 2,898	.61	£ 185	6.38
1,946	.41	421	21.85
20,059	4.24	6,976	34.78
33,839	7.16	15,864	46.88
21,909	4.64	12,021	54.87
12,699	2.69	8,769	68.97
309,916	66.57	235,212	76.90
61,412	10.87	43,072	83.78
704	.15	820	116.47
17,297	3.66	27,464	158.90
472,678	100.00	350,816	74.23

"In 1909 81.02 per cent of the business of tariff offices bore a claim ratio of over 64 per cent, as against 70.84 per cent with a claim ratio of over 62 per cent in 1908, while of the business of the non-tariff offices under review of 82.94 per cent in 1909 bore claims in excess of 68 per cent, as against 85.57 per cent in 1908 with a claim ratio of over 66 per cent.

"For tariff offices the average cost of claims arising and settled during the year has been, for fatals £94 14s., for non-fatals £3 15s., while the estimates for those which arose during and remained unsettled at the end of the year are, for fatal cases £103 2s. 5d., and for non-fatals £21 9s. 3d. The average annual payment for a permanent case works out at £24 14s. and the annuity values average 106 years' purchase this time a mass of experience sufficient to warrant a revision of rates, and, if the business is to be made a source of profit, a general increase would seem essential. As matters

stand, a fall in claim ratio is hardly to be looked for, and if, as we think possible, the postponed liability from past years develops as time goes on, Workmen's Compensation Insurance will cease to be worth conducting even as a source of introduction for other lines."

NINETY-FOUR VARIETIES.

Use of the official letterhead of the House of Representatives to push a private financial scheme over the name of Representative Harry M. Coudrey of St. Louis has caused much talk in Washington. Mr. Coudrey was defeated in the recent election. The following letter has been sent out under date of November 3:

"Dear Madam: The purport of this letter is to state that I desire to take up with you an exceptionally fine business proposition, and make inquiry to learn if you care to have the facts placed before you.

"The foundation has been laid; also the cornerstone, and the balance of the structure is to be composed of the persons of standing. To this end I have conferred with many people who are in a position to say who are desirable. You have been so recommended; therefore this letter of inquiry.

"The writer would greatly appreciate hearing from you. I am,

"In your reply Yours sincerely,
please refer to H. M. COUDREY.
Personal File 'C.'"

Mr. Coudrey's enterprise is called "The Lincoln National Holding Corporation of America," which is advertised as having "proposed capital and surplus of \$15,000,000."

The literature issued advertising this concern makes it appear to be an embryo insurance trust. The Lincoln Company declares a purpose of organizing and buying a controlling interest in many subordinate insurance companies, which "will handle 94 different kinds of insurance combinations."

The 94 kinds of insurance include everything, from life, fire, theft, hail, tornado, burglary, and lightning insurance to insurance for court bail bonds and registered mail.

"Often Copied: Never Equalled."

Insurance News in the West

CHICAGO, Nov. 16.—A prominent union manager has added some interesting comments to those already made on the unfortunate abandonment of the effort to reduce large city expenses. This manager was active in the movement and probably understands the whole situation as well as does any man in Chicago. He says that in his opinion the non-union companies have just ground for complaint at the attitude the union companies have assumed in refusing to take up the "excepted" cities, un-

less the whole Western field is taken up. The non-union companies which are in the Western Insurance Bureau, he says, have a large undertaking on hand at present in adjusting agency contracts in half a dozen States. They cannot do everything at once and are not to be criticised for excepting certain cities, such as Indianapolis, Detroit, Minneapolis, St. Paul and Kansas City, in addition to the six "excepted" cities. When the companies took up this expense question they took it up merely for the "excepted" cities, where no organization has supervision and where conditions are the worst as regards expense. Had the companies carried out the program started upon the union companies would have helped the non-union companies to meet present expenses in other territory by reducing their large city expense, but the non-union companies would have performed a similar service for the union companies.

This manager also points out that this is not the first time union companies have failed to carry out their undertakings regarding the "excepted" cities. At one time a number of years ago several managers joined the union on the understanding that the large cities were to be taken up. But they were not taken up, and to-day some of the leading members of the Western Insurance Bureau are those that then joined the Union, but left it later.

He says that one cause of the present deadlock is the attitude of some of the union managers toward the non-union managers. While this is not in any sense a universal attitude, there is a certain union contingent which carries its orthodoxy to an extreme. It can see nothing good in any company out of the Union; can scarcely understand how any reputable manager can stay out of the big organization, and because many managers do stay out doubts whether they really are to be considered reputable. This suspicious attitude makes co-operation between the two classes of companies difficult.

* * *

Somebody has been doing some very plain talking in Iowa. A few days ago one of the Des Moines daily papers quoted the secretary and manager of a fire insurance company (not named) as saying that "conditions governing fire insurance in the State of Iowa will have to be changed if the Iowa companies are to survive." He says that he doubts if more than two of the State companies made any profits last year, while some lost heavily. The main trouble, he points out, is in farm insurance, where the loss ratios are growing higher nearly every year.

This is very frank talk, and the fact that an officer of a company would

disclose the serious situation in which the Iowa companies find themselves raises a fair presumption that they see no way of getting relief except by admitting they are "up against it." The re-election of Governor Carroll does not make the situation look any better. For seven or eight years Iowa has had no more determined enemy of the fire insurance business than Mr. Carroll, not because he is set upon ruining it or even injuring it, but because of his firm belief in certain policies under which it is almost impossible to avoid chaos in the field and losses in underwriting some classes of business.

The situation in the State of Iowa is peculiar and interesting. In perhaps no other Western State is there such bitter hatred of the insurance companies by the people, evidenced by as strong an anti-compact law as can be drawn, a law forbidding the use of the co-insurance clause and other oppressive measures. That this public attitude was brought about by the high-handed tactics of the companies years ago is beside the question. Iowa has more home companies than has any other Western State, originally fostered by laws which made possible the starting of companies on very little cash capital and a reserve law which bears lightly on young companies. In the old organization days underwriting profits were very large, as witnesseth the Hawkeye paying dividends of \$30,000 annually for years, while its cash capital was only \$25,000, the other \$75,000 being stockholders' notes. This excessive profit also bred new companies. The State, being almost purely agricultural, most of the home companies turned largely to farm insurance. For years they made money on that, and the profitability of it raised up a horde of mutuals to take much of the cream of the business and lower the average of that left to the stock companies. As the cities have grown up the big Eastern and foreign companies, most of which do not write farm business, have corralled much of the city business.

* * *

With the growth of tenant farming and the increase in the number of large barns, with practically all farm values concentrated in them, and the gasoline and machinery hazard added, the profits on farm business have gone down until for some companies they have disappeared. While the Iowa business as a whole usually shows a loss ratio around 40 per cent, which means a good underwriting profit, it is the outside companies operating in the cities and towns which are reaping most of this, while the home companies, carrying the bulk of the farm business, are suffering. None of the farm companies wants to cut the old standard rates which prevailed in compact days, but none has the nerve to

advance those rates alone, and the anti-compact law prevents the companies from agreeing upon an advance.

With a few exceptions the Iowa companies are practically confined to an unprofitable field. Most of them are too small to go into outside States with much hope of success. They cannot wrest the more profitable city and village business from their stronger competitors. They cannot advance farm rates to a profitable point under the present law. It can readily be seen that there must be a change in conditions if they are to survive.

It has been suggested that the best way out of their difficulties would be through consolidation. The little companies are burdened with too many officers for their assets and the volume of business they do. They are also employing too many special and local agents, keeping up a hot competition for business which is of questionable value when they get it.

* * *

Rumor has it in Chicago that the State's Attorney's office is going to take up the subject of rebating by life insurance companies. Last week on the witness stand in the Municipal Court a well known agent admitted that he had given a rebate of \$500 on a large premium. His general agent is said to have asked advice from the home office as to what to do. Representatives of other companies are expressing hope that the State's Attorney will take up this case. The company, whose agent is involved, is no worse than plenty of others, if as bad. As the Illinois law visits the sins of the agents upon their companies also, a number of companies are likely to find themselves in trouble if the State's Attorney gets busy and conditions really are what some agents say they are.

* * *

There is some criticism of the custom which local associations of life underwriters have fallen into of soliciting funds for the entertainment of the National Association from local companies, which at the national meetings are likely to get jumped

upon for their methods. Nearly every Western city of importance now has one or more local life companies. With but few exceptions they are preliminary term companies, many of them were organized by unapproved methods, and a number conducting their business in a way not looked upon as orthodox. The better portion of the membership of the National Association of Life Underwriters is composed of representatives of the old companies which operate in New York. They are entitled to express their views freely, and in doing so they are very likely to criticise the younger companies. It is hardly consistent for the local bodies to place the visitors in the position of enjoying the hospitality of companies they do not approve and are likely to "roast" before they got out of town.

* * *

Last week's election is likely to result in the shifting of a considerable

amount of surety business in Chicago. The Democrats carried every county office except Probate Judge. As the Republicans have been in power for years, a general housecleaning is expected in the county building—before a Civil Service law is enacted. While a number of surety offices had Republican connections which gave them some of the county official business, it is expected now that the bulk of this business will be controlled by George E. Brennan, manager of the United States Fidelity and Guaranty, and John McGillen, who has recently taken a general agency of the American Bonding under the Chicago branch office, following his resignation of the United Surety. Both of these men are prominent in Democratic politics and stand close to Roger C. Sullivan, who is the controlling factor in the party in Illinois.

LA SALLE.

THE USE OF ALCOHOL.

The annual convention of the agents of the Southwestern Life Insurance Company of Texas, held in Dallas, heard an address by H. D. Lindsley, President of the company.

Whitfield Harrall, medical director, has just issued to the medical examiners of the Southwestern Life the following instructions in regard to the use of alcoholic beverages by applicants for insurance:

"One of the most important duties of the medical examiner is to ascertain and report, without offending, the habits of an applicant regarding the use of alcoholic beverages. Such terms as 'temperate,' 'occasionally,' 'moderately,' 'social drinker,' 'very rarely,' convey no definite information and necessitate correspondence.

"Be specific and state WHAT the applicant drinks; HOW MUCH and HOW OFTEN. 'Ten drinks a day,' 'two drinks a week,' 'not over one glass of beer a month,' are statements that indicate something definite. It is sometimes very difficult to obtain the truth from an applicant, either on account of his desire to overstate facts or conceal them.

"Two types of hazard are represented—one the steady drinker, the other the periodical drinker. The first shows the result in organic changes, chiefly in the kidneys and liver. In the other these changes do not occur so early, but the effect on the nervous system is marked, and the added moral and accident hazard is very great. The lives of such individuals are shortened, and hence are not desirable.

"Neison's table shows the influence of alcohol upon the expectancy at various ages to be as follows:

Age. Intemperate. General.		
20	15.5	44.2
30	13.8	36.5
40	11.6	28.8
50	10.8	21.2
60	8.9	14.3

"From the above you will note that the expectancy of the alcoholic is only one-third of the general at age 20, while at 60 it is nearly two-thirds.

"The examiner should give the company the benefit of his knowledge regarding the habits of an applicant, no matter how much at variance the same may be with the applicant's own statements."

UNEMPLOYMENT INSURANCE.

(Continued from Page 2.)

gaged in government or municipal service, those employed on the rail-ways and similar concerns, and generally those whose employment is, by its nature, of a permanent character. It will probably be found necessary also to fix a wage limit, and confine membership of the scheme to those whose earnings do not exceed a certain low, fixed sum. Such sum should certainly not exceed the limit named in the Workmen's Compensation Act, 1906—namely, £250 per annum, and might reasonably be fixed at a lower amount.

In regard to the machinery for carrying out such a scheme, the author gave reasons for the opinion that it should be independent of existing trade union organizations, although the co-operation and assistance of these latter should be welcomed and sought. He next proceeded to consider the possibility of combining such a system of insurance with those dealing with sickness, invalidity and old age, and assuming such a possibility, the advantages of such a combination.

In approaching the subject, he said, from this point of view, one is at once struck by the fact that all these forms of insurance are, in reality, insurances against unemployment. It would not be necessary for such a Congress as the present to consider the risk of sickness and invalidity and the provision for old age, were it not that these conditions all imply more or less complete inability to work, with the consequent loss of income. Pearing in mind that insurance is principally concerned with the dimensions of the risk, rather than with the causes which produce the risk, it seems prima facie probable that the risk of unemployment, however arising,

can advantageously be dealt with by one system of insurance, which shall include unemployment arising from failure to find work, from sickness, from invalidity and from presumed incapacity arising from old age.

It is easy to see that the collection of information as to unemployment from all causes, whether sickness, invalidity or absence of work, if these are combined in one system, can be accomplished with as little labor, and perhaps with less labor, than would be required in the case of each system of insurance if taken separately. Moreover, all difficulty of classification, such as between sickness and invalidity, or between these and inability to continue work by reason of enfeebled physical condition, would disappear, if all the forms of insurance were combined in one system.

It is, I think, equally easy to show the advantages from the point of view of organization that will result from combining into one system all forms of social insurance. In the first place, in any such system as that which I have outlined above, and, assuming that where contracting out is allowed it will only be allowed in respect of all forms of insurance or none, the contributions will in every case be payable at the same time and place, and by the same persons, for all forms of insurance. The fixed charge for insurance, which could hardly in any circumstances exceed a deduction of 5 per cent from the wages, would be a premium for all insurance against all forms of unemployment, including unemployment due to incapacity arising from old age.

In the second place the machinery necessary for carrying on any one system of social insurance is practically identical with that required for any other; and it is, therefore, manifest that, at least so far as the working of the systems is concerned, they should be combined into one organi-

zation. Without such combination considerable difficulty would arise in the matter of the overlapping of the different forms of insurance, as, for example, where a man in receipt of unemployment benefits fell sick and received, or endeavored to receive, sick pay in addition. With regard to the supervision of those receiving benefit, it is manifest that the same system would be applicable, in the main, to all forms of insurance; and the same staff of supervisors could carry it out. I am of opinion that in practice it will be found better to organize unemployment insurance according to locality, rather than according to trade.

PURITAN LIFE AFFAIRS.

The Executive Committee of the Puritan Life Insurance Company, of Providence, R. I., advises its stockholders that its financial condition is so strong that a well known New York company proposed to take over the business on very favorable terms. This offer was placed before the Board of Directors and was rejected by an almost unanimous vote, eighteen out of the twenty directors being present.

Chronicle Paragraphs

AT THE next meeting of the Insurance Society of New York on November 22 an address will be made by Samuel R. Weed on the subject of "Moral Hazard." This lecture should be an interesting one because open to all of the insurance fraternity and held at the rooms of the New York Board of Fire Underwriters, 123 William Street. Mr. Weed is not only a good speaker, but also well versed upon any subject pertaining to insurance.

* * *

Nearly fifty new names have been added recently to the membership of the Insurance Society of New York. The total number is now over 650, embracing nearly every branch of insurance, realty and financial business.

* * *

On January 1 the new law goes into effect (as to New York State) regarding the operations of all Lloyd concerns. It is thought that this enactment may restrict materially London Lloyds in this State. As no person or firm can act directly or indirectly—agent or representative—it would seem that such prohibition would preclude the binding or acceptance of risks, at least upon those located in New York State for account of Lloyds of any kind.

* * *

With a proposed capital of \$500,000 and surplus of \$100,000, the Peerless Fire Insurance Company has been incorporated at Waco, Texas. The underwriting operations, it is stated, will be on a basis of less than tariff rates.

* * *

It is under contemplation by the New York Plate Glass Company to change its name to the City of New York Casualty Company. This would be in line with President Major A. White's idea as to conforming the title to that of the City of New York Fire Insurance Company, of which institution he is also President, and, besides, give opportunity for using a broader name in view of the proposed enlarged scope as to casualty lines.

* * *

Frank & Dubois will take additional office space at 45 William Street to provide for the firm's increased business as United States managers for the Yorkshire Fire.

* * *

R. J. Kerr, at present Assistant Secretary of the United Surety Company, has been engaged as manager of the bonding department under Whilden & Hancock, who are general agents of the Pacific Coast Casualty Company for New York and New Jersey.

* * *

It has often been remarked by fire underwriters that two companies, each with a capital of \$200,000 and a surplus of equal amount, would do more

business under the same office representation than a single company with \$400,000 capital and \$400,000 surplus. This may seem a paradox, but it is, nevertheless, the peculiar ethics of fire underwriting experience. And yet we hear of continued amalgamations for purposes of increased capital and surplus. Ability to reduce expenses thereby may undoubtedly accrue, but as to increased lines, that does not often materialize, as brokers have often noted.

* * *

It is expected that the New Jersey Fire Insurance Company of Newark, which is rapidly approaching completion, will shortly be ready for business.

* * *

From the Department of Insurance at Bismarck, N. D., under Bulletin 37, comes information regarding violation of law relating to misrepresentation. It is charged that the mode of procedure is somewhat as follows, quoting from the bulletin referred to:

"That a man who has a deferred dividend policy, and who has paid say ten annual premiums, or thereabouts, is approached by an agent, who inquires as to what kind of insurance he is carrying, and when advised of the fact that he is carrying a deferred dividend contract upon which he has paid in the neighborhood of ten premiums, he is advised by the agent that he can carry the same amount of insurance without any cost to him whatsoever; that it will be taken care of by his deferred dividends, and will not cost him a cent. The proposition looks good to the person who is approached, and at the request of the agent he signs what he supposes to be an application, and he knows no difference probably for a year, when he is requested to pay the premium on both policies and also the interest on a loan, which is probably the amount of the first premium on his additional insurance. He has signed an application for a loan without his knowledge.

"These are the facts as explained to the department, and if such a thing is being done by any insurance agent and it can be conclusively proven to the satisfaction of the department, not only will the agent's license be revoked, but the license of the company employing such an agent will be revoked."

Over 125 agents were licensed in North Dakota for fire companies during October.

* * *

Unexpired risks of the Shawnee Fire of Topeka, located in Georgia, Florida, Alabama, North Carolina, Virginia and South Carolina, reinsured in the National of Hartford, have been taken over by the People's National of Philadelphia.

Aviation Hazard the New Problem

EVERY few days life and accident underwriters are being strengthened in their position as to the hazard involved for policyholders in the spread of aviation. The death of Johnstone at Denver last week, which appears to have been due to carelessness in a slight repairing job on the machine in which he made his ascension, accentuates the situation. For some time past several companies have been sending notices of their intention to cancel policies of men identified with aviation contests, regardless of whether the policyholder makes a flight or not.

The most conspicuous instance of

this course occurred in September, when Allen A. Ryan, chairman of the Committee of Arrangements of the International Aviation Meet at Belmont Park, was notified that his continued connection with the meet would be deemed sufficient reason for cancelling policies held by him. Mr. Ryan did not own an aeroplane, did not intend to buy one and had no idea of making a flight. His duties as chairman of the Committee of Arrangements consisted of attending to the details of the meet. He was not even required to be on the field during the flights. Despite this, he was notified that he would be compelled

to forfeit all his claims under the policies he held if he retained his position in the meet.

Mr. Ryan's case was by no means a solitary instance. There is no question that the aviation hazard will have to be allowed for in some form sooner or later, especially in so far as it does not include those who actually make the flights. In view of the experimental nature of aviation up to date, several prominent life underwriters have hesitated recently to take any position just yet, other than that of cancelling all policies held by persons identified in any way with the promotion of aviation contests.

Classification Tables and Their Reason for Existence

IN A circular letter to its agents, the Hartford Fire Insurance Company has made public an expression of its views in regard to the value of classification tables to the most successful fire insurance companies in their underwriting practice. In the course of this letter the Hartford management says:

"Moreover, such tables enable companies to know at all times what proportion of the various classes their agents are offering, and whether the average quality of their business is being satisfactorily maintained or not. Again, in deciding what lines may be properly and safely assumed, classification tables are most helpful.

"From time to time it is suggested that the proper way to determine fire insurance rates for all risks is to fix premium charges by results of the classification table. Even a prominent Insurance Commissioner has recently remarked that it may be desirable to require from companies 'a uniform classification, figured so that the experience of each company on results of each classification can be readily determined.' * * * Reference to the classification would determine the justness of the rate charged."

"This method of settling a vexed question seems plain and easy—and it is a reflection on generations of fire insurance men that they have overlooked so simple a solution—provided the whole conception be not a fallacy. But unfortunately for fire underwriters, classification tables, as formulae for the making of rates, are wholly inadequate and unreliable. To an experienced insurance man the results of classification have some general and indeterminate suggestive value, but they afford absolutely no material for accurate deduction.

"There is no similarity between fire insurance classification tables and the mortality tables of the life companies. In life insurance the individual insured is a standard man. He must inevitably die, and the company knows in advance just how much it must pay when he does. There are no partial losses in life insurance. The average expectancy of life is easily ascertained, and the life actuary has exact mathematical data on which to figure his rates. Not so with the fire insurance company. Few of its risks are 'standard' or can be made so. Many of its insureds never suffer from fire, and when a claim is made

it may be for the face of the policy or for an insignificantly small proportion of the amount insured.

"To fire insurance there is no fixed basis on which to found mathematical calculations of rates. Risks are complex and seldom precisely alike. As a single instance of complexity, we may take a three-story brick building occupied on the ground floor as drug store; on the second floor, as millinery shop, and on the third floor as printing office. Here, in one building, are presented the distinct hazards of three kinds of risks. To what class shall it be posted? Perhaps there is not another building in the same State occupied by exactly the same combination of hazards. A company writing the stock on the ground floor would classify its risk as a drug store. The company writing the property on the second floor would probably call it a millinery store. The company writing the property on the third floor would doubtless classify it as a printing office. Now, a frame dwelling situated next door catches fire, and, the fire spreading, entirely destroys the three-story brick building and contents. The loss did not arise from a cause inherent in any of the classes contained in

the brick building. What good reason is there for saying that this occurrence has any relation to the discriminatory rates which should attach to other drug stores, millinery stocks and printing offices?

"One fundamental difficulty about classification tables is the impossibility of arriving at such a division of classes as will produce results having scientific value. Every risk, naturally, has its own inherent hazard, and if each risk of a class were identical both as to building and contents, and every one were situated detached, classification tables might be devised which would approximately show the fire hazard of individual classes. But with almost every risk there are circumstances which differ from those of other risks of the same class. Some buildings are of sole occupancy. Those variously occupied have combinations of hazard differing one from the other. The number of possible combinations is infinite. No class can be made up of risks identically the same, and yet if we pile into one class all risks of a general kind, irrespective of how they may be combined with others or what peculiar conditions they may have surrounding them we get results obviously valueless. On the other hand, if we seek to avoid this difficulty by multiplying classes and classifying together only risks closely approaching each other as to characteristics, we have such a variety of classes and so we reduce the volume of each as to narrow the average and show abnormal results produced by transient or exceptional causes. We are between Scylla and Charybdis.

"As illustrating the infinite combinations which exist in fire insurance risks we may instance stocks of merchandise alone, mentioning a few of the variations important to consider when fixing rates for insurance. Some stocks are in brick buildings and some in frame; some are in buildings with shingle roofs; others in buildings with tin roofs; some buildings have walls of certain thickness and capacity to withstand fire; others have thinner walls or thicker; some buildings are one-story, some are twenty; some buildings have interior divisions in the shape of walls with openings protected; others have no interior divisions and have area varying from small to mammoth proportions; some risks are exposed by brick buildings and some by frame; some by business structures and some by manufacturing establishments; some stocks are more subject to damage than others, and some, in case of small fires, cause total loss to the companies because the amount of insurance carried is low. Coinsurance is obtainable in some places and prohibited by law in others. Some establishments are clean, some dirty; some successful, some failures. Every one of these features and many others are important to consider when making rates. They differentiate the risks presenting them, and thousands of

combinations occur.

"If rates were to be fixed by the results of classification must not there logically be also thousands of classes to correspond with all these variations? And if so we further must multiply the total several times over to provide for risks of these respective kinds when situated in towns with good fire departments, in towns with poor departments and in towns with none at all. We speak here only of stocks of goods, but dwellings and each individual class of manufacturing risks must needs be divided in like manner.

"Care, cleanliness, character and business methods are all entitled to consideration in the making of rates, but how can they be expressed in a classification table? Trapped elevators, iron shutters, watchmen and automatic alarms, everybody knows, have prevented loss, but nobody knows how much they have prevented, so nobody can say, except as a matter of judgment, how they should affect rates. The value of these uncertain qualities cannot be ascertained by means of classification.

"If, for sake of argument, we concede the possibility of logically establishing a rate on any class by the results of its classification, what do we then have? A rate, it is true, but after all only an average rate. It is conceivable that it might not be the exact rate of any individual risks in the class. All will remember the patriotic citizen who claimed for his town the attractive average temperature of 60 degrees—made up, as was afterward ascertained, of 100 degrees in Summer

and 20 degrees below zero in winter. If we find that the average rate of a certain class is 1 per cent shall we reduce to that figure all its inferior risks, now paying more, and increase the rate on its better built or carefully managed establishments for which we now charge less?

"One cause of loss which upsets all attempts at scientific deduction from classification is exposure. The most frequent cause of fire in particular risks is its communication from another building, near or remote. This fact vitiates all classification undertaking to prove the relative fire hazard of different classes of risks by the amount of the loss each presents.

"But even if we had the science of classification reduced to a point where there was absolute connection between the dollars of loss shown in each class and the causes which produced such loss, we should still be without an effective guide for the future making of rates. We should have a history—that is all. Great changes are constantly occurring in methods of building, material for construction, in processes of manufacture, in growth of cities, height of buildings, and in the use of such agents as gasoline and electricity. The conditions which produced the classification figures of the last ten years have altered, and what results the change will inevitably bring there is none can tell. By the time the results of such changes could be crystallized into classification tables other changes would have occurred, again making our tables unreliable."

Maccabees of the World

THE case of Wright vs. the Knights of the Maccabees of the World, which may involve more than 90 per cent of the millions of outstanding fraternal insurance, came up for argument last week in the Appellate Division of the New York State Supreme Court. Alton B. Parker appeared for the fraternal society. A brief has been filed by George W. Miller, who is an authority on legal aspects of fraternal insurance and a law partner of Representative James R. Mann, of Chicago. The case involves directly the continued life of the fraternal system of insurance, for the reason that the right to collect from members rates adequate to provide sound insurance is at issue. Counsel on both sides regard the outcome of this case as momentous to fraternal insurance throughout the country, which is held by upward of 6,000,000 members.

This case of Wright vs. the Knights of the Maccabees of the World originated in 1904. Dennis L. Wright, of Watertown, N. Y., in 1905 was suspended from membership in the Knights of the Maccabees because of

failure or refusal to pay membership dues at rates advanced by the Supreme Council because the previous rates were found to be inadequate to pay the cost of insurance and of management. A suit was brought to secure the reinstatement of Wright and to enjoin the fraternal association from changing its dues and assessments. The case has been passed upon before by the Appellate Court, the lower court, which held for the plaintiff, Wright, being reversed. On the second trial judgment was entered for defendant, which was confirmed by the Appellate Division of the Supreme Court, but this was again reversed by the Court of Appeals. On the third trial the plaintiff again won, and the hearing is again on appeal, this time of the defendant society.

The case involves the main points covered by the bill for State regulation of fraternal insurance recently adopted by the National Convention of Insurance Commissioners and endorsed by the National Fraternal Congress and the Associated Fraternities of America, the question of adequate rates. The Insurance Commis-

stoners bill would make adequacy of revenue compulsory upon all societies.

"If these associations have not the right to readjust their rates," the Miller brief alleges, "so as to collect from their members rates of contribution which will enable them to redeem their outstanding obligations and pay their promised benefits as they mature from time to time, it means that each of them will struggle along for a few years more when increasing mortality will lead to their destruc-

tion, and it will be the end of this beneficent system of insurance."

The right to readjust rates in these associations has been a matter of controversy in the courts of the country before, and the Supreme Courts of Indiana, Georgia, Illinois, Virginia, Massachusetts, Kansas, Nebraska, Tennessee, Michigan, one of the Appellate Courts of Missouri, the Court of Civil Appeals of Texas, the Appellate Division (Second Department) of New York, as well as every Federal court which has heard the question.

The Future of Fraternals

IN A statement recently prepared Actuary George D. Eldridge expressed with clearness the conditions confronting fraternal orders, in the course of which he said:

"The agreement at Mobile, through which there is presented for the supervision and regulation of fraternal beneficiary societies the draft of a bill which has behind it the support of the Insurance Commissioners' Convention and of the fraternal orders, as represented in the two great bodies, the National Fraternal Congress and the Associated Fraternities of America, is a matter of national

economic importance. Nothing less than what is therein required can accomplish the perpetuation of the system of fraternal protection.

The time has come when the managers of every society should recognize that nothing is to be gained from the mere temporary advantage of cheapness born of failure to provide for obligations incurred; that those institutions that have already placed themselves upon a proper foundation of rates, instead of thereby making themselves the target for an unjust competition, have led where all must follow, and that the sooner the steps

necessary for such following are taken the better will it be for the system of fraternal protection and for all who are charged with its responsibilities.

"The great fundamental principle of the proposed bill is recognition of the right of each society, as a self-governing, responsible body, to work out its salvation by its own selected means.

"If a society is able to make its returns, as now required, to the several insurance departments, without enforcing balances or guessing at results, then with comparatively little trouble or expense the material for a valuation can be had. If it has to force balances or guess at figures, then it is likely to find the preparation for a valuation somewhat difficult and expensive.

"Unless a society's records are so kept that a valuation can be fairly easily made they are not so kept that the membership can be given accurate knowledge of the condition and needs of the society as a whole, or that the individual can know whether his certificate of membership is a stated, redeemable provision for protection of his dependent ones, or simply something to cozen him and them into a belief that he has done his duty by them, when in reality he may have betrayed their most sacred interests."

Nebraska Rating Law Unconstitutional

THE United States Circuit Court has declared the Nebraska State Rating law unconstitutional and has issued a permanent injunction restraining the Governor, Attorney General and Auditor of the State from attempting to enforce its provisions. The Nebraska State Rating law, which is Chapter 27 of the Laws of 1909 of Nebraska, provides for a State board to fix the rates for fidelity and surety premiums to be composed of the Governor of the State, the Attorney General and the Auditor of the State. The American Surety Company opposed the enforcement of the act and instituted proceedings in the United States Circuit Court, District of Nebraska, to secure a temporary injunction restraining the State officials from enforcing its provisions pending the decision of the court as to its constitutionality.

This action on the part of the surety company aroused the animosity of the State officials, who immediately started retaliatory litigation against the company, bringing two actions for \$5,000 each as fines for having resisted the law, and the Attorney General brought a separate action in equity to have the American Surety Company thrown out of the State. The suits to impose two fines of \$5,000 each on the company came up before Judge

T. C. Munger of the United States Circuit Court, who decided against the State officials and granted the temporary injunction prayed for by the American Surety Company. The action to have the company debarred from Nebraska never came to trial.

The decision just handed down disposes of the Rating law and is very interesting to all insurance interests because Judge Munger takes the position that the fixing of the price of insurance or surety premiums is not within the province of the State any more than the fixing of the price of any commodity would be, and that an endeavor to do so is a violation of the Fourteenth Amendment of the Constitution of the United States. The American Surety alone deserves the credit for the success of this litigation, because it conducted the fight independently, and, in fact, against the advice of the other members of the Surety Association of America, which voted by a large majority not to oppose the Nebraska law.

Judge Munger in his opinion said in part:

"The real controversy in the case is over the power of the State to fix the rates to be charged for insurance. No case has been cited where such a question has previously risen, although acts somewhat to the same effect have been passed in other

States (Laws of New Hampshire, 1899, Chap. 85, Sec. 1; Laws of Kansas, 1909, Chap. 152, Sec. 3).

"May the State exercise this power, in view of the Fourteenth Amendment to the Constitution of the United States, which declares that no State shall 'deprive any person of life, liberty or property, without due process of law?'"

The liberty to enter into contracts is not an unrestricted liberty, but is subject to the police power of the State. The extent to which the State may go in the exercise of this power in regulating or prescribing the prices of goods or services is not clearly defined. In earlier days it was usual for Parliament to fix the rates which lawfully could be charged even by those who were engaged in private business, and such legislation also existed in the colonies before the adoption of our Constitution (Freund on Police Power, Sec. 318). The right to regulate the charges for services of those whose business is devoted to a public use has been thoroughly established. It is also well settled that the right exists in the State to regulate the charges to be made by those whose business is affected by a public interest. (Munn vs. Illinois, 94 U. S. 113-125; Budd vs. New York, 143 U. S. 517-544; Brass vs. North Dakota, 153 U. S. 391.)

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

- Low premium rates.
- Large surrender values.
- Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in instalments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

For further information apply to
JOHN H. ROBINSON, General Agent
FRANK ALLEN, Associate General Agent
For New York and New Jersey,
Postal Building,

253 Broadway, • • • NEW YORK.

The three cases just cited involved the validity of statutes regulating the charges which lawfully might be made by those owning grain elevators, and in each case it was declared that the business conducted by them was so affected with a public interest that the State could regulate the charges imposed by them. Some of the characteristics of that business which led the court to declare it to be affected with a public interest were: The practical monopoly of the business at the places where it was carried on, and the consequent power to levy tribute upon the community; its relation to the business of transportation, and to the business of common carriers, thus, being of a quasi-public character.

The business of the companies engaged in furnishing surety bonds has none of those characteristics. It is in no way a monopoly, for individuals and partnerships are free to furnish such bonds in competition with them, and to make any charge or no charge for assuming such risks. No one is compelled to resort to the surety companies as practically the only source from which may be obtained surety bonds. The public interest in the business of such companies is no different from its interest in the business of any large mercantile or manufacturing company, whose capital, experience and facilities may enable it to have a widely extended patronage, but such characteristics do not make the business one which is affected with a public interest. (State vs. Associated Press, 159 Mo. 410, 60 S. W. 91.)

If the State may fix the amount of compensation for which an insurer may lawfully contract for furnishing such insurance the State may dictate the price for which all other commodities shall be sold, including the price which may be paid for labor. This cannot be done. The Fourteenth Amendment to the Constitution protects the right of those engaged in purely private business to fix the price at which they will sell their services or commodities.

The case of Chesapeake and Potomac Tel. Co. vs. Manning, 186 U. S. 238, 246, involved the right of Congress to regulate the charges to be made by any person or telephone company doing business in the District of Columbia for the use of such telephones. The court said:

"And we start with the proposition that it cannot be presumed that a Legislature intends any interference with purely private business. It cannot ordinarily prescribe what an individual or corporation engaged in a purely private business shall charge for services, and, therefore, although the language of a statute may be broad enough to include such private business it will generally be excepted therefrom in order to remove all doubts of the validity of the legislation. It appears that some portion of the defendant's business is of a purely private nature, the receipts

whereof are spoken of in its reports as private rentals, and as to such business Congress could not, if it would prescribe what shall be charged therefor. In many buildings, both those belonging to the Government or the District, and those belonging to private individuals, is what may be called a local telephone plant—that is, an arrangement of telephones by which parties in different rooms can communicate with each other; a system which is not connected with the general telephone exchange, and is no more public in its nature than the speaking tubes or call bells in a building. It is only for the personal use of parties in the building. By it those in the building cannot communicate with the general public, nor can such public reach parties in the building. It is simply a local convenience for the use solely of those who are in the building. Such combinations of telephone instruments in a single building, with no outside connections, are furnished by the defendant, and the rentals therefrom, as well as the expenses thereof, are entered in its books of account, and constitute a part of its business. The mere fact that such telephones are furnished by the company, which also does a public business, does not make them a part of such public business, or subject them to the regulation by Congress of its charges. A railroad company may, if authorized by its charter, carry on not simply its strictly railroad business but also an establishment for the manufacture of cars and locomotives. The fact that it is engaged in these two different works would not in itself subject the manufacture of cars and locomotives to the supervision of the Legislature, although such body would have the right to regulate the charges for railroad transportation. So, in an inquiry of the reasonableness of the charges imposed by Congress in this legislation, it is essential that the receipts and expenses from such private telephone systems be excluded from consideration."

In the case of People vs. Coler, 166 N. Y. 1, 59 N. E. 716, the court had before it an act of the Legislature of

The Connecticut Mutual

That means the best life insurance to have and the best to sell. If you can sell life insurance, you can sell more of it for the CONNECTICUT MUTUAL.

Men of Character and Ability are invited to apply.

Conn. Mutual Life Ins. Co.,
Hartford, Conn.,

Please mention this paper.

New York providing that laborers on public works should be paid the prevailing rate of wages. This provision of the statute was held to be void, and the court said:

"The contractor is a private individual, engaged in private business. When he enters into a fair and honest contract for some municipal improvement that contract is property, entitled to the same protection as any other property. It is not competent for the Legislature to deprive him of the benefit of this contract by imposing burdensome conditions with respect to the means of performance or to regulate the rate of wages which he shall pay to his workmen, or to withhold the contract price when such conditions are not complied with in the judgment of the city. When he is not left free to select his own workmen upon such terms as he and they can fairly agree upon he is deprived of that liberty of action and right to accumulate property embraced within the guaranties of the Constitution, since his right to the free use of all his faculties in the pursuit of an honest vocation is so far abridged."

In *Street vs. Varney Electrical Supply Co.*, 160 Ind. 338, 66 N. E. 895, an act of the Indiana Legislature was in question. It provided that unskilled labor employed on any public work of the State, counties, cities and towns should receive not less than 20 cents an hour. In holding this law to be in violation of the Fourteenth Amendment to the Constitution of the United States, the court said:

"If the Legislature has the right to fix the minimum rate of wages to be paid for common labor then it has the power to fix the maximum rate. And if it can regulate the price of labor it may also regulate the prices of flour, fuel, merchandise and land. But these are powers which have never been conceded to the Legislature, and their exercise by the State would be utterly inconsistent with our ideas of civil liberty. Among the most odious and oppressive laws ever enacted by the English Parliament, in the worst of times, were the statutes of labor of Henry VI and Edward III. These

enactments fixed a maximum rate of wages for the laboring man, prohibited him from seeking employment outside of his own country, required him to work for the first employer who demanded his services and punished every violation of the statutes with severe penalties. In the very nature and constitution of things legislation which interferes with the operation of natural and economic laws defeats its own object, and furnishes to those to whom it professes to favor few of the advantages expected from its provisions. The circumstances that the act of March 9, 1901, reverses the conditions of the statutes of labor of Henry VI and Edward III, and lays the burden and the penalty upon

the employer instead of the laborer, does not render it any less pernicious and objectionable as an invasion of natural and constitutional rights. Statutes similar to this have been before the courts of other States, and in nearly every instance have been held unconstitutional."

See also *State vs. Norton*, 5 Ohio (N. P.) 183; *State vs. Firecreek Coal and Coke Co.*, 33 W. Va. 188, 10 S. E. 288.

The act of the Nebraska Legislature of 1909 falls within the principles announced in these cases, and as it does not seem that the portions of the act are separable the whole act must be declared void, and its enforcement will be enjoined.

Life Underwriting Problems

THAT the question of getting the right kind of men as recruits for the army of life insurance agents is a practical problem of much moment to company executives is indicated by the prominence being given to the subject in the programme of the fourth annual meeting of the Association of Life Insurance Presidents, to be held at Chicago on Friday and Saturday, December 9 and 10. In a letter now being sent to invited guests, inclosing a copy of the preliminary programme, the following statement is made:

"One of the problems of the life insurance business to-day is found in recruiting the field forces—the men who spread the gospel of protection for the home and who write the business. This is a difficulty experienced by every company, whether large or small. It is hoped that some practical solution will be pointed out in the discussion of this subject which has been arranged for the first day of the meeting. Executive officers of companies and agency managers will relate the nature of the troubles they have had in this respect and some will explain how they have recently overcome this situation to a certain extent. Representatives of universi-

ties prominent in the vocational training movement in this country will tell what institutions of higher learning are accomplishing in the professional training of men for business positions, and probably the way will be indicated for a more practical direct application of this method of instruction with respect to the life insurance business. It is hoped that the officers of all companies will come prepared to join in the general discussion and thus add the benefit of their experience and thought to this important subject."

The investments made by trustees for life insurance policyholders, savings bank depositors, etc., is another subject which will receive attention at the meeting. It will be broadly discussed in a paper by Prof. James Laurence Laughlin, of the University of Chicago, who is an economist with an international reputation.

No institution employing men in positions of financial trust need look beyond the advertising columns of THE CHRONICLE for FIDELITY INSURANCE.

AGENTS WANTED FOR UNOCCUPIED TERRITORY

Dutchess in Court Again

CHARLES J. Stovel, representing California policyholders, caused an order to be served upon the Directors of the old Dutchess Insurance Company last week to show cause before Justice Tompkins at White Plains to-morrow why a receiver should not be appointed. The law firm of Baldwin & Hutchins, of 27 Pine Street, New York, is acting for Stovel.

In addition to the affidavit and order there was a summons and complaint against the Directors to remove

them as trustees and let the receiver transact all the business. The trustees named are: Lewis H. Vail, Milton A. Fowler, William S. Ketcham, John N. Lewis, Eugene Ham, Cyrenus P. Dorland, Samuel H. Moore, I. Reynolds Adriance, Alonzo H. Vail, Floy M. Johnston, Edward S. Atwater, George H. Sherman and J. Wilson Poucher. These men still have charge of the funds of the company, which went out of business after the San Francisco fire and earthquake. There is an action pending in the Supreme Court here, brought by these same trustees, to determine what shall be done with nearly \$100,000, which represents the balance of funds remaining after the settlement of the San Francisco claims for 30 cents on the dollar.

In his complaint Stovel says that the other suit was not brought in good faith. But it "is brought in furtherance of a fraudulent scheme and conspiracy on the part of the defendants here on their part to obtain a judgment in such action, which will validate the various unlawful and fraudulent acts of the defendants herein and will operate as a bar to any action which may be brought by a stockholder or creditor of the Dutchess Insurance Company." Stovel, in his complaint, says that there are \$200,000 or more of the assets of the old company which will not reach the stockholders unless summary action to appoint a receiver is taken by the court.

NEW COMMISSIONER IN FEDERAL DISTRICT.

George W. Ingham, statistician of the District of Columbia Insurance Department, has been appointed superintendent of that department by the District Commissioners. He succeeds the late Thomas E. Drake, who died in July. Daniel Curry, examiner of the department, has been acting as temporary superintendent. After announcing the appointment the Commissioners gave out the following statement:

"After weeks of careful investigation and consideration of the matter of filling the vacancy in the position of Superintendent of Insurance of the District of Columbia, the Commissioners concluded that either of the two ranking employes of the office is as competent to fill the position as is any other person that is available.

"It becomes, therefore, the duty of the Commissioners, in accordance with their policy of filling vacancies by promotion where practicable, to name one of the employes next in line. In the case of Daniel Curry they took cognizance of his long and faithful service and the good work he has done as acting Superintendent of In-

surance. Mr. Curry has the indorsement of many of the leading professional men and others of Washington.

"George W. Ingham has been connected with the Insurance Department since its organization, possesses fine ability and, in the judgment of the Commissioners, is thoroughly competent to perform the duties of the office. He is indorsed by nearly 30 per cent of all the insurance companies doing business in the District of Columbia, which has, of course, had weight with the Commissioners in determining the relative merits of those under consideration. Mr. Ingham's appointment is made in the best exercise of their judgment to obtain the best service in the position of Superintendent of Insurance that appears to be available."

HELVETIA CASE ENDS.

Judge Lacombe in the United States Circuit Court has vacated warrants of attachment against the Central Trust Company, Weed & Kennedy and the New York State Insurance Department in the case of Max J. Grandenstein and others against the Helvetia Swiss Insurance Company. The warrants were sworn out by the United States marshals of the Northern and Southern districts of New York in suits instituted by residents of San Francisco for judgments recovered against the Helvetia Swiss for losses during the San Francisco conflagration.

The case of the Helvetia Swiss is one of the most complicated legal tangles of all the litigation arising from the great fire. In 1906 the Helvetia Swiss had its statutory deposit with the New York Department. The company was not doing business direct in San Francisco at the time of the fire, but is alleged to have purchased the business of a smaller Swiss company which had established there. After the fire the small company closed up its office and withdrew from the country. The loss claimants, therefore, attached the funds of the Helvetia Swiss in the Central Trust Company, Weed & Kennedy and the New York Department. Since then the Helvetia has ceased doing business in this country and the money has been held awaiting the disposition of the suits.

SURETY STATEMENTS.

Assistant Secretary of the Treasury Hilles has issued a circular calling the attention of surety bonding companies, doing business with the United States, to the act requiring them to file statements in January, June and October of each year, showing their financial condition. Mr. Hilles states that the Secretary of the Treasury has no authority to extend the time, within which these statements must be filed, but that it will be his duty to enforce the penalties required by the law of August 13, 1894, for failure to comply with its provisions.

In New England

BOSTON, Nov. 22.—The recent death of former Insurance Commissioner Theron Upson, of Connecticut, recalls to a writer in the "Hartford Times" the circumstances of Mr. Upson's retirement from the office of Commissioner when the present Commissioner, Colonel Theodore Macdonald, was appointed in his place. The story runs as follows:

"He had been Commissioner for five years and had made a record for efficiency of which he had reason to be proud. He had expected to be reappointed by Governor Woodruff. But he would not ask the Governor for a reappointment. With confidence he relied on his record to secure for him the favorable consideration of Governor Woodruff. Nor would he allow any of his friends to ask the Governor to reappoint him. He repeatedly said that he was not a candidate in the sense of being an applicant for a reappointment. It was only to a few intimate friends that Mr. Upson admitted he would accept a reappointment, but he positively forbade these friends to repeat his statement to the Governor. His position created the impression on the minds of those who were not in his confidence that he was not a candidate and that he did not care to continue as the head of the Insurance Department of the State. But whatever doubt there might have been as to Mr. Upson's desire was removed by the appearance of a dispatch from this city in a New York financial paper, stating positively that Mr. Upson was not a candidate for reappointment. When this item made its appearance every one was satisfied that Mr. Upson wished to be relieved of the duties of the Commission. Governor Woodruff appointed his friend and townsman, the present efficient Commissioner, Colonel Macdonald, to succeed Mr. Upson. It was afterward learned that the author of the dispatch had misunderstood

Mr. Upson. It has always been thought he was unwittingly the cause of the superseding of Mr. Upson in the office of Insurance Commissioner. Mr. Upson, however, never had any feeling about the matter. He rather excused the sender of the dispatch by accusing himself of not having been sufficiently explicit in his statement. It was characteristic of Mr. Upson not to blame any one for the circumstances that contributed to his retirement from the office of Insurance Commissioner. He was never inclined to find fault and he took everything, even the disappointments of life, with a philosophical cheerfulness."

The office of Insurance Commissioner, by the way, is among the appointments to be made by Judge Baldwin, Governor-elect of Connecticut.

Little Bureau Meets.

The annual meeting of the Underwriters' Bureau of New England took place at 93 Water Street, Boston, on Wednesday, the 16th inst. Among those present were: United States Manager Crosby, of the Royal Exchange; Vice-President Galacar, Springfield; President Sargent, New Hampshire Fire; Secretary Ludlum, Home; Assistant Secretary Guy Beardsley, Aetna; General Agent E. T. Cairns, North British and Mercantile; Supt. F. C. Moore, of the sprinklered risk department, Hartford Fire; Supt. F. M. Blake, of the sprinklered risk department, Phoenix of Hartford.

The usual reports were read. Manager Gorham Dana reported a successful year with fire losses, which were less than the previous year, and a considerable increase in the number of surveys sent out.

The following were elected:

Executive Committee—Royal Insurance Company, National Insurance Company of Hartford, London and Lancashire Fire Insurance Company, Scottish Union and National Insurance Company, New Hampshire Fire

Insurance Company, Home Insurance Company, Queen Insurance Company, Aetna Insurance Company, German-American Insurance Company.

Membership Committee—Phoenix Insurance Company of Hartford, North British and Mercantile Insurance Company, Northern Assurance Company.

Secretary, Gorham Dana; Treasurer, E. B. Cowles.

George Neiley was elected chairman of the Executive Committee.

New England Notes.

The opening lecture for the season of the Boston Insurance Library course will be given on Friday evening, December 2, at the assembly room of the New England Insurance Exchange, by C. W. Fletcher, controller of the Massachusetts Bonding. His topic will be "Fire Insurance Legislation."

* * *

The handsome building at 95 Milk Street, Boston, owned by the Mutual Life of New York, is on the market for improvement, commercially speaking. Architecturally it is one of the finest structures in Boston, but occupies a plot too valuable for a building of the old fashioned type.

* * *

The Vermont Life Underwriters' Association had a successful annual meeting and dinner at Montpelier last week. Thomas Magner, of Burlington, was elected President, and Glenn A. Wilkinson, of Morrisville, Secretary for the ensuing year, while T. J. O'Brien, of Burlington, was made chairman of the Executive Committee. Fourteen new members were added, and among the after-dinner speakers were Governor Meade, President DeBoer, of the National Life, Thomas Magner and T. J. O'Brien.

* * *

Last Friday night new offices were opened for the New England Mutual Life at Portland, Me., in the new Fidelity Building. The occasion was celebrated with a dinner, at which several members of the home office staff were in evidence.

Insurance News in the West

CHICAGO, Nov. 23.—The Illinois Fire Insurance Commission expects to have its report in the hands of Governor Deneen, and the bills it will recommend for passage, ready when the Legislature convenes early in January. What the practical results of the commission's work will be will depend largely upon the organization of the Legislature. A majority of both houses is Republican, but not all in either house belong to the Governor's wing of the party. If the Governor's friends or-

ganize the two houses and his opponents in his own party stand with the majority the bills should have a good chance of passing, unless some external pressure is brought to bear. If, however, the minority Republicans and the Democrats should co-operate as they did in the last Legislature the Governor's measures may fare badly as a matter of politics.

Two of the committee's bills will provide for supervision of concerns not now under department control and for an anti-discrimination measure, providing for the filing of basis rates and schedules of charges and credits with the department, so that it may judge whether there is discrimination as between classes of risks. Should this become a law one important result would be a reduction in preferred rates in Cook County, or, what is not at all likely, an increase in the rest of the State. This anti-discrimination bill will also prohibit rebating, unless that evil should be treated in a separate measure.

It is taken as a sign that unauthorized companies see that there is to be legislation curtailing their freedom of action that within the last few weeks five of them have been admitted to Illinois, which heretofore have been operating as surplus line companies without license. Three of these are big French companies—the General Fire, Union and Nationale.

Considerable support in putting through a bill placing unincorporated concerns under supervision and strengthening the surplus line law is expected from the local agents of the State. Many of them have suffered severely from the inroads of London Lloyds particularly, and other unincorporated concerns in a less degree. At the meeting of the Illinois Association of Local Fire Insurance Agents last week at Decatur measures were taken to increase the membership of the organization. Secretary Meisant will spend considerable time working among the agents seeking their cooperation in the organization movement. Incidentally he will use his influence in favor of such legislation as the local agents need. Another force in this direction will be H. F. Espenscheid, of Danville, formerly state agent of the National of Hartford and one of the most influential field men in the State. He is now a local agent. He has one or more friends in nearly every town of any importance in the State and his influence with them is such that he can "start something" for the benefit of local agents generally and make his work felt.

On this proposition of supervising Lloyds the authorized companies and the agents can work together. London Lloyds are now said to have three-fourths of the automobile busi-

ness in Chicago. A fire the other day showed them on a large risk for \$104,000. These are merely samples of what the Lloyds are doing to the stock companies.

* * *

In appointing Thomas R. Weddell, editor of the Insurance Post and Insurance editor of the Chicago Record-Herald, as publicity man, the publicity bureau of the Western Union made a good choice. Mr. Weddell will not give up any of his present connections. Therein lies much of his value. As a newspaper man, rather than as representative of the fire insurance companies, he will seek the cooperation of newspapers and trade papers in a campaign for reduction of the fire waste. His first letters have met with a generous response. A number of influential trade papers have asked for articles by experts on hazards peculiar to their lines and several trade associations have requested speakers for their meetings. The Western Union among its inspectors and hydraulic and electrical engineers has some excellent men, who can either write or speak on their specialties in a practical manner suited to impress business men. Eventually it is expected to get much matter to the public through the country newspapers, all aiming to impress the people with the tax they are laying upon themselves in burning up so much property every year.

* * *

It is hoped that the Fire Marshal's department of Illinois can be made effective before the first of February. Governor Deneen has expressed his intention to send a special message to the Legislature at the beginning of the session asking for the passage of an appropriation bill with an emergency clause to release for use the Fire Marshal's funds now tied up through a defect in the law which created the office. During the period in which he was unable to carry on his intended work, Fire Marshal Doyle has addressed a large number of commercial bodies on the fire waste and has made the acquaintance of the members of the new Legislature, thus creating a sentiment in favor of the department and allaying opposition to it.

* * *

Reports from Des Moines are to the effect that there is much talk about consolidation among fire insurance companies in Iowa. The Insurance Department is examining a number of them and finds several of them in weak condition, especially when it is taken into account that they have a large amount of farm notes in their assets.

* * *

Some of the life insurance companies are considerably worried over the the campaign against rebating which

State's Attorney Wayman at Chicago started last week in bringing suit against two companies and three agents to collect fines. As the Illinois law provides that the informer shall get half the penalties imposed there is a chance for no end of trouble and for somebody to get rich if he can unearth even a fraction of the rebating which is alleged to have been going on.

* * *

The Executive Committee of the Chicago Surety Underwriters' Association is now endeavoring to work out plans for effectively stopping certain abuses which have appeared in the business, especially within the last few months. The committee recognizes that it has a difficult task in working out any rule which shall define and govern brokers and at the same time be acceptable to a majority of the managers and general agents. While it is pretty generally recognized that it is against the spirit, if not the letter, of the present rules to pay commissions to lawyers, every little while some office reports having been offered business by a lawyer if it would pay him a commission, and, having refused, only to find later that the bond had been executed. This is

a hard class of cases to deal with.

* * *

The Globe Surety of Kansas City has been admitted to Illinois and has had a representative in Chicago looking over the general agency material, but up to the end of last week had not announced any appointment. The company is regarded as a desirable one, and there are several men in Chicago controlling considerable business who have been looking for a general agency.

* * *

From current reports a few of the burglary insurance companies are going to make a sorry showing when their Illinois loss ratios for the year are made up. One general agent who does a fair amount of business says he will be in luck if he gets out with a loss ratio of 85 per cent. Two large offices have admitted that they have been hit hard. In the case of one the full losses may not show in this year's figures, as it is resisting several of them which it believes to be crooked. On the other hand there are some companies which up to the present time have played in good luck. Their turn may come before New Year's, however.

LA SALLE.

Railroad Relief to Employees

AT A meeting of the New York Railroad Club last Friday night Joseph N. Redfern, of Chicago, superintendent of the relief department of the Chicago, Burlington and Quincy, read a paper on "Employers' Liability and Railroad Relief Departments." Referring to public sentiment having been aroused in favor of "employers' liability" and a "workmen's compensation" act, and a prevailing difference of opinion as to which should be adopted, Mr. Redfern said the general proposition of both is that every industry shall be compelled to bear the expenses of all injuries to employees which happen in the industry without wilful negligence of the employee—particularly the ex-

ception as to wilful negligence amounts to nothing. It is argued that there is no sound reason for distinction between accidents caused by negligence and those which are unavoidable.

"To attempt to make an employer pay for something for which he is not responsible," Mr. Redfern declared, "is equivalent to confiscation of property, and it is not to be expected that laws such as are now proposed can be enforced except with a delay of years, until the question can be submitted for final determination to the United States Supreme Court.

"There does not seem to be any sound reason for compelling an employer to pay damages to an employee

who breaks his leg because he accidentally stubs his toe on the stairs of his employer, which were not defective, or because of a defective sole in his shoes; if an employer can by law be compelled to pay damages in such cases could the employer be compelled to pay damages for similar injuries inflicted while the employee was on his way to work, but not on the premises of his employer?"

Mr. Redfern insisted that fraternalistic work in foreign countries is no reason why their steps should be followed in this respect any more than we should follow in their steps as regards wages paid employees. "Contrast the recent railroad strike in France," he remarked, "where one of the principal demands of the men was for a minimum wage of \$1 a day, with the wage of the railroad employees of the United States. If our employees received the wage paid in other countries there might be some reason for society's assuming the proposed obligation, but, considering the fact that they receive the highest wage of any workmen, it would seem they should do something for themselves.

"The experience of railroad relief departments is that over one-half of the total amounts paid in benefits to members and their beneficiaries is on account of disability and death from sickness and injuries received while not at work, and this, too, in a line of work which is admittedly of the most hazardous character.

"There are six railroad systems in the United States operating relief departments. They are: Baltimore and Ohio, 1880; Pennsylvania lines east, 1886; Philadelphia and Reading, 1888; Burlington, 1889; Pennsylvania lines west 1889; Atlantic Coast Line, 1890. These roads employ about 400,000 men. About 275,000 of them, or 70 per cent are members of these relief departments. The members are contributing to the funds annually about \$4,000,000, and the companies are contributing a like amount in cash and facilities. There is being paid to the members and their families about \$4,000,000 a year, and to date about \$50,000,000 has been paid in benefits over one-half on account of sickness."

HERE AND THERE

An odd and interesting pamphlet entitled "A Few Helpful Suggestions for the Man Behind the Gun," has been issued by T. Howard Lewis, Boston Manager of the Mutual Life of New York. The pamphlet contains originalities as well as bromides.

* * *

Rhodes & Morrison, a firm composed of Frederic H. Rhodes and Frederick A. Morrison have been appointed general agents of the Berk-

shire Life for New York and New Jersey. John H. Robinson will continue to represent the companies as a general agent.

* * *

The Northern Insurance Company of Moscow has made the deposit in the State of Connecticut and was licensed on Monday. This is the second admitted reinsurance company under the management of Fester, Douglas & Folsom, and will enter the various States. The Northern has home office assets of nearly \$6,000,000.

* * *

Four cases involving the constitutionality of the Employers' Liability law, passed by Congress in 1908, which were to have been argued before the Supreme Court of the United States on November 28, have been reassigned for argument on January 16. This action was taken at the request of Attorney-General Wickersham.

* * *

Insurance Commissioner Beedle of Wisconsin has issued a circular on rebating as regards surety bonds, which are being issued in large numbers just now on newly elected public officials. He asserts that the anti-rebate law does not forbid insurance companies to alter rates, but does prevent agents from reducing rates by rebating part of their commissions. If he rebates he is liable to a fine, imprisonment and the revocation of his license for three years. The department also declares that agents, especially of health and accident companies, are taking a note for a part of the commission, with the understanding that the note is only to be paid from a claim under the policy, if any. This is plainly a rebate in violation of the statute and will be prosecuted.

* * *

The attempt of policyholders of the American Temperance Life Insurance Association to elect one of their own number to the vacant directorship in place of James H. Pettit, who was supported by the officers of the company, failed on Tuesday and Mr. Pettit was re-elected. The meeting, which was held in the rooms of the National Temperance Society at 3 E. Fourteenth Street, was stormy at the outset owing to dissatisfaction with the administration. It ended more peacefully, however, when it was announced that in spite of the victory the officers had gained they would for the sake of harmony allow one of their directors to resign and in his place elect Henry W. Wilber of Philadelphia. The resignation of Dr. D. A. Dobie was accepted at the directors' meeting that followed and Mr. Wilber was chosen in his place.

No head of a family need look beyond the advertising columns of THE CHRONICLE for LIFE INSURANCE.

DARWIN P. KINGSLEY IN NATIONAL SURETY.

Darwin P. Kingsley, President of the New York Life Insurance Company, has been elected a director of the National Surety Company. At the meeting of the directors the stock dividend of 33⅓ per cent to present shareholders, as provided for at the stockholders' meeting, was formally declared, payable to holders of record of November 30. In addition thereto, the directors declared the usual quarterly dividend of 2 per cent, payable January 3 to holders of record of November 29. It was also announced that the 5,000 shares of new stock authorized at the shareholders' meeting of November 9, which is to be sold at 150 per cent or better, has been oversubscribed four times the amount to be allotted.

TO SUCCEED CROUSE.

The Board of Public Works, which consists of the Governor, Controller and Treasurer of Maryland, has elected unanimously Emerson C. Harrington as Insurance Commissioner for the term of four years. Mr. Harrington is from Cambridge, Dorchester County, where he was born in 1864. He was graduated from the St. Johns Academy, Annapolis, in 1884, and then for four years taught Latin and mathematics; then for two years he was principal of the Cambridge Academy, and when it was combined with the Cambridge Female Academy he continued as its principal for nine years. While connected with this school his energies were given to the study of law, and in time he was admitted to the bar. In 1899 he was elected on the Democratic ticket as State Attorney for Dorchester County and served four years. He was one of the organizers of the Farmers' and Merchants' Bank of Cambridge and also one of its Directors. Professor Joseph E. Green, who has been Deputy Commissioner since 1905, will be retained.

Steel Trust Gets a Medal

THE permanent exposition of safety of the American Museum of Safety and Sanitation was opened in the auditorium of the Engineering Societies Building, at 29 West Thirty-ninth Street, on Monday night.

It is the design of the promoters to create a clearing house for safety devices for all phases of American activity. Efforts to conserve health will be recognized also.

On behalf of the Travelers Insurance Company S. C. Dunham, President of the company, presented to the United States Steel Corporation a gold medal awarded to the industrial institution whose management had done most during the last year to conserve human life and prevent accident. The medal was received by William B. Dickinson, Vice-President, on behalf of the corporation.

Edson S. Lott, representing the casualty companies, made the opening address. He made it clear that the accident companies are very much

interested in the museum. He said that the companies will be direct beneficiaries of the good which the museum is sure to accomplish. Any agency which would tend to lessen liability losses would lessen premium rates.

"The largest percentage of profit on all lines of insurance, I think, and on liability lines, I know, is made from the lowest premium rated risks," said Mr. Lott. "Every casualty insurance company has a prohibited list—that is, there are certain lines which some companies do not insure at all. The prohibited list varies with different companies. Some companies do not insure sewer construction of any kind, some do not cover steel construction work, others will not write policies on mining operations.

"But not a single low premium rated risk is on the prohibited list of any insurance company. The prohibited industries are always those which pay the highest premium rates for their insurance. It must be, then, that, from purely selfish motives, if

none other, all casualty insurance companies will welcome the work of the museum of safety and sanitation, because it will reduce premium rates and at the same time increase underwriting profits.

"Of course, employers of labor will be actuated by the same motives. And I believe that the vast majority of employers of labor will be actuated by a nobler motive, by the humanitarian aspect. I have spent the greater part of my business life dealing with employers of labor, and my experience with them has taught me that they, as a class, are profoundly interested in any practical measure looking toward the betterment of conditions affecting their employees."

William H. Tolman is director of the museum, and its officers are Philip T. Dodge, President; Charles Kirchhoff, Vice-President; T. Commerford Martin, Frederick R. Hutton and Dr. N. E. Ditman, chairman of the committees; William J. Moran, counsel.

British Underwriting Novelty

THE current issue of the "Policyholder," of Manchester, England, an article of unusual interest appears under the caption, "A New Life Assurance Scheme," as follows:

"While a practically unceasing supply of new and ingenious schemes of insurance or indemnity emanate from the department known by the comprehensive term of 'casualty insurance,' it is comparatively seldom that fresh ground is broken in the domain of life assurance. The explanation of this is obvious. In the one department the opportunities of putting new ideas into shape are severely limited by the nature and purpose of the contract; in the other department innumerable subdivisions can be made—

there is inexhaustible material for the manufacturer of insurance novelties. A well-known expert, speaking on the general prospects of insurance business, declared recently that there is hardly any contingency in life for which a quotation cannot be made; that the day is coming when insurance companies will cover every risk that a human being is heir to; that there are countless branches of insurance, out of which profit is to be made, as yet untouched; and in the brief period which has elapsed since these observations were made several striking adaptations of the insurance idea given to the world might be cited in confirmation of the belief they expressed. Looking back upon the development of life assurance in the last

thirty years, the most important modifications of the original scheme are seen to be the endowment assurance policy and the policy with 'options' at maturity, while other noteworthy variations have been a plan providing for the discontinuance of payment of premiums during disablement, one for dispensing with medical examination and one combining life and invalidity insurance. Various alterations and concessions as regards the method of payment of premiums have also been introduced into the system, the offices constantly vying with one another in their efforts to make the contract of assurance convenient and attractive to the public. At the present time a

Good men, whether experienced in life insurance or not, may make direct contracts with this company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, N. Y.

Paul Morton on Conservation

PAUL MORTON, President of the Equitable Life Assurance Society, has made an appeal to his agents in behalf of that phase of conservatism which signifies most to life underwriters. In this appeal he says, in the main:

"The Equitable Life Assurance Society of the United States has nothing to do with politics, but it has a great deal to do with conservation.

"The conservation of the country's natural resources deserves the consideration of all thoughtful men, but the conservation in which we are interested is the conservation of insurance.

"The Equitable was the first company to show the public that a life insurance policy could be paid as promptly as a bank draft; it was the first company to make the insurance contract incontestable after one year; it formulated the system of investing the assets in the localities contributing them; it has always been recognized as a pioneer in reforms for the benefit of policyholders, and I should like to see it take the lead in adopting the most efficient measures for the conservation of insurance.

"The American people have shown a greater appreciation of life insurance than any other nation. But, although they have insured more readily, they have been less steadfast than the people of other nations, and the result has been the surrender of many policies for trivial reasons, or without reason. This has resulted in much waste, and has done serious injury to the steadfast policyholders who have remained, as well as to those who

have retired.

"The Equitable has done, and is doing, much to minimize this evil, but much more may be attained by concerted action.

"If all our general and local agents will write in a campaign of education and in an earnest endeavor to keep outstanding insurance on the books they will render an important public service, and will gain an enormous personal advantage. For the permanently successful agency is the one which is supported by a loyal army of policyholders; and any agent is short-sighted who concludes that his time is wasted if spent in persuading members of the society to keep their policies in force. It makes no difference whether these policyholders are clients of the particular agent or not. The man who has been insured by some other agent and then surrenders his policy can do you as much harm as a deserter from your own ranks. In the army the most severe punishments are for desertion. This is not simply because the services of the deserter are lost, but because his example has a demoralizing influence on those who remain, and because he sows dissension wherever he goes.

"No agent can hope for permanent success unless he secures public confidence in the community in which he is working, and every deserting policyholder in that community will exert an influence which will tend to retard the growth of public confidence.

"The very act of surrendering a policy prematurely suggest the inference that the policyholder is dissat-

isfied. The maintenance of a policy, on the other hand, indicates satisfaction. Surrendered policies influence no new insurance, while a matured endowment or a death claim paid are utilized by every competent agent in extending his business."

ACCIDENT POLICY RENEWALS.

At a conference between Superintendent Hotchkiss of New York and Commissioner Hardison of Massachusetts several questions came up for consideration and decision relative to the laws of both States, which go into effect on January 1 next, whose purpose is to regulate the issuing of accident and health insurance contracts.

In respect to the renewal of policies issued before that date and which have no provision giving the insured the right to renew by the payment of successive premiums, it was decided that, although it is a close question whether or not these so-called renewals are not technically new contracts, calling for the use of new policies as prescribed by law, yet, in view of the practical difficulties in the way and the loss which might result to policyholders, the benefit of the doubt should be given to the present method of renewals, and any further question which might arise thereunder be left to the courts or to further legislation. There will be, accordingly, no interference by these departments with the renewal of contracts now in force by renewal certificates, if that method is acceptable to the companies and their policyholders.

However, the departments urge that policies issued under the new law have a renewal provision, so that, in respect to such policies, no question can arise as to whether or not a renewal certificate is legal.

(Continued from Page 11.)

policy can be paid for by weekly premiums (in the industrial branch), by monthly, quarterly, half-yearly or single payments, and the companies give every possible facility to enable the assured to keep their policies in force.

"In spite, however, of the helpful assistance given by the companies in emergencies when the lapsing of the policy is one of the alternatives confronting the assured, it is one of the objections alleged against the life assurance contract that the premium must be paid on a fixed date, and that the premium notice may arrive at a time when it is most inconvenient—perhaps impossible—to pay. 'There are a few men,' says a leaflet on 'Life Assurance and Investment Assurance,' recently issued by the Economic Life Assurance Society, 'who can afford to make the necessary provision for those dependent upon them and set their mind and conscience at rest by a payment down of a single premium. They are to be congratulated. There is, again, a large class of happy men with assured positions and fixed or increasing salaries to whom the recurring premium periods present little anxiety. They can forecast accurately their available means, but, however carefully they may arrange their expenditure, they cannot forecast the unexpected calls on their purse occasioned by illness or other unforeseen calamity.' It is, however, to the very large and important class of men who are in professional or business work on their own or on partnership account—the class which has to expect and allow for a fluctuating income—that the scheme proposed by the Economic should specially appeal. The society offers a policy the unique feature of which is that premiums are optional as to date and amount—the assured practically can pay as he pleases and when he pleases.

"The plan submitted by the Economic is a simple modification of the single premium principle—and the single premium policy, whatever may be urged for or against it, must be the method of payment which involves the smallest amount of anxiety as regards the future. Under the new scheme the total amount of the premiums payable is limited to the amount of a single premium, and of this it is only necessary to pay 5 per cent to begin with, the remaining 95 per cent being payable in instalments of any amounts and at any periods convenient, interest at 4 per cent (less income tax) being payable on the balance unpaid. By this arrangement the assured secures all the benefits, and options too, attaching to a paid up policy, subject only to the debt represented by the amount of premium unpaid, which can be reduced from time to time in small or large amounts just as it may suit the convenience of the assured. We get a good idea

of the working of the scheme by the illustration given in the society's leaflet. Age 32 next birthday is selected for the purpose, and the hypothetical policy is for £1,000, with profits, on the whole-life plan. The total amount of premiums payable is £444 4s. 2d., and the first instalment of premiums (5 per cent) is £22 4s. 2d. Having paid this first instalment the policyholder is assured to the extent of £1,000, plus any bonuses which may have accrued at the time of his death, but subject to deduction of any portion of the balance of premium and interest which may be unpaid. When the policy has been in force a year and the time has come when, under an ordinary policy, the renewal premium would have to be paid, the assured is in a position to temporize. He can, if things are temporarily bad, pay only the interest on balance of premium (£422), viz., £16 17s. 8d., and leave the question of reducing the premium till the following year. Then he may find business good and the shakel\$ flowing in well, and he may be glad to pay, say, £72 on account of premium plus interest £16 17s. 8d., leaving £350 to be paid off premium account, and reducing interest to £14. In the following year we may assume a swing of the pendulum in the direction of bad business, and the policyholder merely pays £14 interest; in the succeeding year things are much improved and he can reduce his debt by £100, in addition to payment of interest, £14, leaving £250 due for premium, and interest reduced to £10. Of course, interest would continue until the remaining £250 of the total premium is finally cleared off.

"A point not to be overlooked in connection with this scheme is that the policy is to rank for the full sum assured at each bonus distribution, and the policyholder will have the option of using the cash value of the profits then allotted to reduce the amount of loan then outstanding. In this connection the bonus prospects of the Economic become an important consideration. The society has sought to attract the insuring public in the past chiefly by offering the benefits of life assurance at an exceptionally low premium, and that fact ought always to be borne in mind when comparing its bonuses with those of other offices charging higher premiums. But, after all, the Economic declared at its last investigation (as at December 31, 1908) a 'compound' bonus of 20s. per cent, and its invariably favorable mortality experience, moderate expenditure and the high average rate of interest earned on the funds (it was £4 6s. 10d. per cent last year, as compared with 3 per cent assumed in the valuation) afford grounds for the belief that at future valuations the society will not disappoint those who have formed reasonable expectations as to its continued prosperity."

REFORM IN UTAH.

State Insurance Commissioner Done of Utah is continuing his campaign for clean practices in insurance circles in that State, and last week issued the following statement and warning concerning the operation of life insurance agents:

"The Commissioner of Insurance calls attention to certain practices which are likely to creep into life insurance work at this season. In their attempts to secure a large volume of business in the last months of the year, agents are likely to be tempted to make use of rebating, twisting and misrepresentation. The department takes this opportunity of warning agents and applicants for insurance against these things. The offence of rebating involves both the giver and the taker of the rebate, and both are criminally guilty, and if discovered will be prosecuted to the full extent of the law. The other offenses involve the agent alone, and will also subject him to prosecution and punishment.

"Upon the due proof presented to this department that an attempt had been made by an agent to lapse a value-bearing policy, or that misrepresentation has occurred or an offer has been made to rebate any part of the premium, the license of such agent will be immediately revoked."

Bruce Committee Again

DANIEL F. GORDON, Chief Fire Insurance Examiner of the State Insurance Department, testified on Tuesday before the Legislative Investigating Committee that there were at present 375 fire insurance companies doing business in New York State and that the aggregate capital of the companies was \$69,000,000 and their combined surplus \$164,000,000. The total amount of losses paid by the companies last year was \$133,000,000 and the total amount of premiums collected \$271,500,000.

Mr. Bruce wanted to know if the London Lloyd companies had any license to do business in this State, and was told that they had not. Mr. Gordon said that the "general opinion" was that several of the London Lloyd companies were operating here, but that he had no personal knowledge of it. He admitted that if they were really operating here it would be a violation of the law, and that the proper procedure in such a case would be for the State Superintendent of Insurance to make a report to the Attorney General and the District Attorney.

Mr. Gordon testified that the usual commission paid by the fire insurance companies to their agents was 25 per cent. He added that insurance brokers were sometimes paid by the insured and that in some instances, where brokers were employed by department stores, it might be that preferential rates are allowed.

Albert W. Whitney, Professor of Mathematics and Insurance at the University of California, and actuary of the Legislative Committee, produced a report he had compiled for the San Francisco Chamber of Commerce, after the San Francisco fire,

showing many facts pertinent to the fire loss of both the insurance companies and the property owners out there.

Mr. Whitney said that the fire loss in San Francisco was about \$200,000,000. The average commissions paid by the insurance companies of this country to their agents was 21½ per cent on new business. Some of the companies paid as low as 15 per cent and some as high as 41 per cent.

Taking six of the largest fire insurance companies in the United States, he said their average profit during the last twenty years was 10½ per cent, and that one of the companies paid an average dividend of 5-10 per cent during that period.

George W. Babb, general attorney for the Northern Assurance Company, and a member of the National Board of Fire Underwriters, described the objects of the national board. "Its work," he said, "is educational and of public service." Its most important work was in bringing about improvements in construction.

Mr. Bruce announced that the committee was especially interested just now in the economic side of fire insurance, but that for the present it would be considered only in its elementary form. As the inquiry progresses an effort would be made to pick out weak points in the present insurance system and suggest remedial legislation.

NEW ENGLAND BREVITIES.

La National of Paris has been admitted to do a fire insurance business in Massachusetts, with S. E. Barton as its Boston representative.

* * *

By the death of John J. Raleigh, of St. Louis, State agent for Missouri

of the John Hancock Mutual Life, who passed away Friday of last week, the company has lost one of its ablest and most successful representatives.

* * *

George L. Fickett, for the last four years an electrical inspector for the New England Insurance Exchange, and prior to that city electrician of Portland, Me., has been appointed superintendent of the fire alarm system of Boston by Fire Commissioner Daly.

* * *

We are indebted to D. N. Handy, Secretary, for a copy of the "Proceedings of the First and Second Conferences of Insurance Institutes of America."

* * *

The announcement is made that Franklin W. Gans has resigned as Vice-President and director of agencies of the Columbian National Life Insurance Company of Boston. This is a step he has had in contemplation for some time, as he wishes to return to his original work as a general agent for the company. It is reported that the directors are negotiating with a man of national reputation to become the insurance manager of the company. EMIL SCHWAB.

Chronicle Paragraphs

A MEETING of the Surety Association of America was held at the Waldorf-Astoria Hotel on November 10. Many important matters were discussed, but one of the principal topics, relating to the question of difference between the American Bonding Company and the National Surety Company as to timber bonds, apparently did not receive attention. This fact rather has the appearance of straining the organization and its stability, not so much from the alleged rate cut as the possible allowance of the larger companies to violate rules to the detriment of smaller ones. The outcome of the controversy is of much interest to all concerned.

The receiver of the Guardian Fire of Pennsylvania, George H. Calvert, is reported as suing at Pittsburg, Robert* Dickson, R. D. Tweeddale and G. N. Thompson, to recover more than \$100,000, the amount claimed to be due the company.

A new fire insurance company is being organized by President W. J. Harris, of the Georgia Fire, Atlanta, to be a running mate to the parent company. Its capital to start with will be \$100,000, with \$50,000 surplus. The same officers will operate both companies.

The Franklin Fire Insurance Company of Washington, D. C., is about to increase its capital stock to the full authorized amount of \$250,000. John A. Kelly, of Kelly & Fuller, is President of the company, which has just declared its 182d semi-annual dividend.

The regular forms for floater policies, under some seven or eight different kinds of phraseology, are up for change. To the Rate Committee of the New York Fire Insurance Exchange the matter has been referred. This chiefly on a question of rate, since changed features have entered into a proper consideration of the wording of floater forms. Originally these printed forms were the result of the careful thought and long experience of the late George M. Coit, of the Royal Insurance Company. They have stood as law for many years in the Exchange. Owing to the steady growth of the metropolitan district and the rapidly changing conditions—physically and from area standpoint—it is quite possible that some alterations would be needed in "floater" forms as well as others.

On Tuesday of this week a meeting was held in Asbury Park of New Jersey local insurance agents for the purpose of forming a State organization, this to become affiliated with the National Association of Local Fire

Insurance Agents. The call for the meeting was signed by many prominent agents from Asbury Park, Elizabeth, Newark, Jersey City and other important localities. Although this so-called "advisory bureau" system has been established since the abolition of the Newark Fire Insurance Exchange, yet still it is fairly well known that certain agencies or companies have brought about a cutting of rates and broadening of commissions which has resulted in many "twistings" of policies. Of course, this is naturally of much deep concern to local New Jersey agents.

From the office of Maguire & Wood, attorneys, of Rochester, N. Y., comes an opinion that the Suburban Fire Insurance Exchange is fully within the requirements of New York State laws.

The Sovereign Fire Insurance Company of Canada, as also the Marine Insurance Company (Limited) of London, has been duly admitted to do business in New York State. For the Sovereign Kelly & Fuller have been appointed metropolitan district managers.

Advices from the West indicate that the Pacific States Fire Insurance Company of Los Angeles has been chartered in California. The capital stock is placed at \$500,000, with a surplus of about \$250,000. It is stated that the Pacific States Underwriters' Company will be the managers for the new organization.

As United States correspondents, Hall & Henshaw have received appointment for the Royal London Auxiliary Insurance Company (Limited) of London. This company is a subsidiary one of the Royal London Mutual Insurance Company, founded in 1861, with total assets of \$13,000,000.

The Franklin Fire of Philadelphia has appointed Ten Broeck, Morse & Co. of New Jersey as head suburban agents.

To fill the vacancy caused by the death of Duncan H. Scott, F. LeRoy Templeman has been appointed manager of the accident and health department of the Maryland Casualty Company. He has been in the company's service since 1899, and during the greater portion of those eleven years has handled personal accident and health claims.

The recent receivership proceedings against the St. Jean Baptiste Society ended unexpectedly in the Superior Court at Providence, R. I., last week. Attorneys for both sides agreed to settle the case out of court.

INSURANCE CO., LTD.

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS\$13,885,802.88
LIABILITIES 8,766,622.58

SURPLUS\$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of\$2,710,650
And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

The Insurance Institutes of America

SERIES of examinations of insurance men in fire and casualty insurance has been planned by the Insurance Institutes of America, of which Albert R. Hosford, assistant manager of the Royal, is Chairman, and E. R. Hardy, assistant manager of the New York Fire Insurance Exchange, Secretary and Treasurer.

The members of the Institute are: The Fire Insurance Club of Chicago, the Fire Insurance Society of Philadelphia, the Fire Underwriters' Association of the Pacific, the Insurance Institute of Hartford and the Insurance Society of New York. The committee in charge of the examinations comprise E. R. Hardy, Chairman; L. N. Denniston, of the Travelers of Hartford, and L. A. Tanner, of the Home Insurance Company of Chicago. All communications of a general nature from those dealing in the subject of fire insurance should be sent to Chairman Hardy, at 84 William Street, New York, while inquiries in regard to the casualty side should go to Mr. Denniston.

The Institute, which was organized at Philadelphia in 1909, and held its second conference in 1910, is putting forth as one result of its deliberations a system of study and examinations.

Insurance in all its branches has developed to such an extent that there is to-day considerable insurance literature, textbooks and reference books. More and more is the practical insurance man realizing that he must rely on insurance literature and use it as a necessary part of his day's work.

The existence of insurance literature carries with it the opportunity for study. Insurance education has grown to such an extent that there are insurance courses in a number of universities and colleges, and the insurance societies all over the country are giving lectures and educational courses. Such facilities are available to many men who live in the large cities or principal centres, but they may not be available to the great number of men who are working in

smaller towns or who cannot take the regular courses. It is to reach all that the Insurance Institute has prepared its study course. It is intended to give every ambitious man the opportunity to study at his own home the principles and practice of the branch of insurance in which he is engaged. It aims to help him acquire knowledge which he would otherwise have to acquire by the rule of thumb. It aims to help the man who is willing to study to do the work of his present position in a better manner, and to prepare himself for promotion to a better paying post. It will be helpful by suggesting to the young men engaged in insurance work what they ought to know if they are to attain a degree of efficiency which will make them useful and successful members of the business. We can readily appreciate what an advantage this would be to a person seeking employment in different parts of the country, or in the world, for that matter, if he can show that he has passed these examinations and holds a certificate from the Institute.

The work of The Insurance Institute of America is patterned after The Insurance Institute of Great Britain and Ireland, which has been so successful that in ten years the number of candidates increased five times, and the number of papers submitted three times. If the educational work of the Institute abroad has proved so successful, then the work of The Institute of America bids fair to be equally successful.

The first work of The Insurance Institute of America will be the holding of a series of examinations during the year 1911. The details covering these examinations are set forth in the official circular issued by the committee in charge.

EXAMINATIONS

1911.

Entrance.—All men interested in insurance are invited to take the examinations.

There is *no age limit*.

Membership in an insurance society is not necessary, though desirable on account of the use of the library.

Enrolment.—Registration blanks will

be sent on application, and the same must be filled out and returned, together with the stipulated fee not later than *January 15, 1911*.

Fees.—The registration fee is \$2 for each year that examinations are taken. No fee is returned. In case the student cannot take the examination the amount will be placed to his credit for further examination in any year that he may choose to take it.

Certificate.—A certificate stating the branch, the subjects and the mark, will be issued, and the names of the successful candidates will be published in the annual report of the Conference and sent to the insurance press.

Date.—The examinations will be held in *June 1911*, and in the evening. Students will be advised of the exact date, time and subject at least two weeks before.

Place.—Arrangements will be made for the holding of examinations in Boston, Chicago, Philadelphia, New York City, Hartford and San Francisco. At each of these points there is an insurance organization who will have matters in charge. Examinations will also be held at Atlanta, Indianapolis, Denver, New Orleans and Cincinnati, providing a sufficient number of students enrol.

Subjects.—The student must take examinations in not less than three subjects, specifying his choice of subjects at the time of filling out the registration blank.

Marks.—The marks of a student's work will be under one of two headings—"Pass" or "Honor."

Examinations Limited.—As a general rule no student will be permitted to take examinations in more than one branch in the same year.

FIRE INSURANCE PART I.

Surveying and Inspecting.

a. **Building Construction**, including heating and lighting.

(The student should have a general knowledge of building terms; a knowledge of the construction of frame, ordinary, mill-constructed and fireproof buildings, carefully covering, in addition to other

things, walls, roofs, floors, chimneys, heating and lighting systems.)

Books of Reference.

Building Construction and Superintendence; Kidder. John Wiley & Sons, New York.

Masonry Construction, Treatise on; Baker. William T. Comstock Co., New York.

Building Construction for Beginners; Riley. Macmillan, New York.

Model Building Code. National Board of Fire Underwriters, 135 William Street, New York.

b. **Hazards.**—Hotel and lodging houses, printing and allied industries, storage and warehouses, cotton mills.

(In connection with this topic the student will be expected to describe the general hazards in two of the group—one, either hotels and lodging houses or warehouses; the other, either cotton mills or printing and allied industries.)

Books of Reference.

Special Hazards. Lectures delivered before Fire Insurance Club of Chicago. Rough Notes Pub. Co., Indianapolis, Ind.

Life Articles on Special Hazards. Weekly Underwriter, New York.

c. **Draughting to Scale.**

Books of Reference.

Primer of Architectural Drawing; Dana. William T. Comstock Co., New York.

Practical Draughting Work; Hasluck. Cassell & Co., New York.

PART II.

a. Correspondence.

(In addition to the ability to write a well-phrased and tactful letter, the student will be expected to show such a knowledge of the general practice of fire insurance as would enable him to deal with every-day occurrences.)

b. **Standard Policy of New York State.**

(The student should familiarize himself with the conditions in regard to policies previous to the adoption of the standard policy in Massachusetts in 1873, in New York in 1886.)

Conrad Reno, "Employers' Liability Acts."

h. Workmen's Compensation Acts

in New York State.

Laws of New York (1910), Chapter 352, Section 3, and Chapter 674.

PART II.

Accident and Health Insurance.

Books of Reference.

History of. Yale Readings in Insurance, Dunham.

"Policy Contract Forms," Faxon. Vol. I, Proceedings, Insurance Institute, Hartford.

"Classifications and Ratings," Parker. Vol. II, No. 1, Proceedings, Insurance Institute, Hartford.

"Underwriting," Ahern. Vol. II, No. 2, Proceedings, Insurance Institute, Hartford.

"Adjusting," Eaton. Vol. II, No. 2, Proceedings, Insurance Institute, Hartford.

"Preservation of Public Health," Messenger.

"Work Accidents and the Law," Eastman.

"Workingmen's Insurance in Europe," Dawson and Frankel.

"Insurance," Papers read at Wharton School of Finance, Philadelphia, Pa.

PART III.

Correspondence.—In addition to the ability to write a well-phrased and tactful letter, the student will be expected to show such a knowledge of the general practice of insurance as would enable him to deal with every day occurrences.

Preparatory.—The question will naturally arise as to the requirements of general education previous to the taking of the examination. It will be assumed that the student has a general knowledge of chemistry and electricity, is familiar with ordinary book-keeping, with mathematics (including arithmetic, algebra and geometry), and commercial geography. It is not the intention to hold examinations in these subjects, but, governed by the character of the papers submitted, the committee may ask the second or third year or before the final certificate is given for certificates as to ability in these topics.

Books of Reference.—The student will understand that the books of reference are listed for his convenience, but it is not necessary that the information should be obtained from the works noted. If it can be secured from any other source that is optional with the student.

Life and Marine.—No examinations are offered for the present year in Life and Marine. These will be offered next year, in addition to Fire and Casualty.

Instruction.—The Institute will offer no instruction, but it is expected that the various insurance societies will open courses for those students who desire to take the examination. If any are interested in taking the course by correspondence the chairman will be pleased to answer all communications relative thereto.

THE CHRONICLE for LIFE INSURANCE.

Interstate Commissioners in Agreement on New Employers' Liability Provisions

AT THE conference of members of commissions on employers' liability, held in Chicago on November 10, 11 and 12 last, the following were represented:

United States Employers' Liability Commission.

New York Commission on Employers' Liability.

Wisconsin Industrial Insurance Committee.

Ohio Employers' Liability Commission.

Minnesota Employers' Liability Commission.

Illinois Employers' Liability Commission.

New Jersey Employers' Liability Commission.

Montana Employers' Liability Commission.

Massachusetts Commission on Compensation for Industrial Accidents.

United States Commissioner of Labor.

Special Committee of Commission on Uniform Laws.

Special Delegate from Connecticut.

The following general programme for proposed legislation was agreed upon:

1. What employments shall the act cover? All employments.

2. Shall all injuries be covered, irrespective of negligence?

(a) Irrespective of employers' negligence? Yes.

(b) Irrespective of employees' negligence? Yes, except where injury is self-inflicted for the purpose of recovery. Burden of proof that injury was self-inflicted to be placed on the employer.

3. Shall all persons engaged in such employments be included? Yes.

4. Shall compensation be paid in a lump sum or in instalments?

(a) Temporary disability? Instalments.

(b) Permanent disability or death? Instalments with right to commute after given time with approval of some public official.

5. Amount and duration of compensation?

(a) Temporary disability? Fifty per cent of the impairment of wages; maximum of \$10 per week, minimum of \$5 per week; or if wages less than \$5, then full wages (or 66⅔ per cent of wages up to \$7.50 of wages per week, then 50 per cent of balance until compensation amounts to the maximum of \$10 per week, maximum). Payments not to exceed beyond period of 300 weeks.

(b) Permanent disability? Same as temporary disability.

(c) Partial permanent disability? Fifty per cent of impairment of wages. Maximum of \$10 per week. Payments not to extend beyond period of

300 weeks.

(d) Death?

1. Total dependents.

If orphans, 50 per cent of wages of deceased.

If widow alone, 25 per cent of wages.

If widow and one child, 40 per cent of wages.

If widow and two children, 45 per cent of wages.

If widow and three children, 50 per cent of wages.

If widow and four children, 55 per cent of wages.

If widow and five children or more, 60 per cent of wages.

If widow, father or mother, 50 per cent of wages.

Children under sixteen years of age only to be included and only during period they are under sixteen years of age.

Maximum of \$10 per week, minimum of \$5 per week, or if full wages less than \$5, their full wages (or 66⅔ per cent of wages up to \$7.50 of wages per week, then 50 per cent of balance until compensation amounts to \$10 per week maximum). Payments not to extend beyond period of 300 weeks.

2. Partial dependents?

Fifty per cent of the portion of the wages contributed by the deceased to the partial dependents.

3. No dependents?

Expenses of last sickness and burial not exceeding \$200.

6. Length of waiting period? Two weeks, during which period employer shall furnish medical treatment or hospital care to an amount not exceeding \$100 in value.

7. Shall dependents include aliens and illegitimate relations? Shall not include aliens residing outside the country. Illegitimate children not to be mentioned.

8. Shall employees contribute? No.

9. Shall it be permissible for employers to substitute voluntary schemes? Yes; provided the voluntary scheme covers all points covered by the law and is approved by

some public official to be determined in the law.

10. Method of determination of controversies. A system of board of arbitration approved.

11. Nature of scheme; Compensation, insurance or state insurance. (a) Voluntary; (b) Compulsory? Compulsory insurance, state insurance. If these not possible, then compulsory compensation providing that the employer may transfer his liability by insuring in companies approved by a legally constituted public body or official.

12. Repeal of other laws? All other laws should be repealed.

13. Constitutionality. General discussion; no definite agreement reached.

It will be observed that the agreement leaves the door open, either for State insurance or for merely holding the employer liable. There is otherwise no special recognition of insurance or provision for it.

The proposals are, however, a great advance over the positions hitherto taken and the substantial unanimity of opinion is promising. The chief defects appear to be:

Failure to recognize insurance, so as to provide for adequacy of reserves, for complete release of insured employers, and, above all things, for the insurance inuring to the benefit of injured employees and dependents of employees who are killed.

Cutting short the period of payment to the disabled or to dependents to 300 weeks at most, which cannot be defended on principle, will largely destroy the economic advantages of the plan and is less than is done in any European nation.

Death of George F. Seward

GEO. FREDERICK SEWARD, President of the Fidelity and Casualty Company of New York and Vice-President of the New York Chamber of Commerce, died suddenly on Monday at his home in this city. He was a contemporary of James G. Batterson, first President of the Travelers Insurance Company and the founder of personal accident insurance in this country. Like Mr. Batterson, Mr. Seward was a man of decided views, and an exponent of the principle that insurance is a private business, and as such constitutionally entitled to make such contracts with policyholders as a company's charter allows, and its ability permits. He could see no good in the style of State supervision which presumed to dictate the details of the business, and, for instance, fought consistently against the recently enacted law which prescribes provisions and prohibitions to be included in personal accident and health policies. He maintained that this law abridged the constitutional right of contract.

Possessing these convictions, Mr. Seward had command of a forceful and lucid style, and in consequence his opinions were received with respect and interest by insurance men and State officials all over the country.

He was born in Florida, N. Y., on November 8, 1840, and was educated at Seward Institute and Union College. When he attained his majority Mr. Seward was attracted to the public service by reason of the prominence of his uncle, William H. Seward, who served in President Lincoln's Cabinet as Secretary of State. In 1861, the year his uncle became Secretary, George F. Seward was sent to Shanghai as Consul of the United States, becoming two years later Consul General, an office he held until 1876.

In 1869 he was also Minister to Korea, and from 1876 to 1880 Minister to China. He was familiar, too, with Siam, having been sent there on a special mission in 1867. While in the Far East he investigated many of China's problems as they related to the United States, and was an advocate of Chinese immigration.

Upon his return to this country Mr. Seward wrote a book called "Chinese Immigration and Its Social and Economic Aspects," which embodied the results of his investigations and his experiences as President of the North China branch of the Royal Asiatic Society, an office he held from 1865 to 1867. Mr. Seward wrote on other social and economic problems, his conspicuous books being a digest of the New York taxation and "Rapid Transit in New York and Other Great Cities."

A few months ago William H. Hotchkiss, State Superintendent of Insurance for New York, was investigating the past relations of fire insurance companies to legislation affecting their business, Mr. Seward was called to give testimony, and he frankly told about the Black Horse Cavalry and strike bills.

"Every Legislature in the country passes more insurance bills than one can easily keep track of," Mr. Seward said in the course of his testimony. "We are kept hopping all the time when the Legislatures are in session. If, as just suggested to me by Superintendent Hotchkiss, we should authorize a permanent board on insurance legislation, that would be in session all the time, how would we ever be able to go to Europe in the Summer for a rest? Why, only last year I personally examined more than 3,000 insurance bills from all parts of the country."

Mr. Hotchkiss read to Mr. Seward an interview in which he was quoted as saying that the fire insurance people "had not been playing honest," and asked him if he had been correctly quoted.

"In the main, yes," answered Mr. Seward, adding, "but the fire insurance interests are harassed and bedevilled all the time from every legislative quarter, and sometimes they have used money wrongfully. Years ago, when I used to go to Albany and meet legislators they would ask me if there was any money in it."

"I recall one particularly shameless proposition that was made to me in 1892. Roswell P. Flower was then Governor. A bill had been introduced to confine companies like mine to one class of business. Passage of this measure would have meant ruin to us. I received a telegram from Albany asking me to meet a gentleman who represented a certain member of the Assembly."

"The telegram requested me to go to Sing Sing and meet my man in the Penitentiary there. This gentleman rejoiced in the name of Brown. It

was not the Brown who then was Warden of the Penitentiary, but another Brown, who held some sort of position there. He told me he was authorized to say that for \$10,000 Timothy D. Sullivan would kill the bill. I sat down and dictated to Brown this telegram to Sullivan:

"Mr. Seward says you can go to h—l."

"Is that the man commonly known as 'Big Tim' Sullivan, now a member of the Senate?" asked Mr. Hotchkiss.

"I suppose so," answered Mr. Seward, who said later in more positive terms that it was "Big Tim."

At the same hearing Mr. Seward said: "When it comes to grafting at Albany there is no difference in the parties. There are Republican grafters and Democratic grafters. The Black Horse Cavalry was composed of men of both parties. But there was never a time when you couldn't rally a sufficient number of honest members against the Black Horse Cavalry to obtain honest legislation."

Mr. Seward explained that the Black Horse Cavalry was a combination of grafters, while a strike bill usually came from an individual. He also told about other attempts of legislators to extort money from his company.

By way of refuting the accusation against him "Big Tim" Sullivan dug into the Congressional records and brought to light the fact that an effort had been made to impeach Mr. Seward. Of this Mr. Seward said:

"There was an effort made in the Forty-fifth Congress to impeach me for alleged wrong in my official conduct as Consul General at Shanghai. This effort was made during the time I was Minister to China. The effort was defeated in the House of Representatives and the prosecution failed."

"In the proceedings to have me punished for contempt, as I remember them, the vote in my favor gave me a majority of four. The House that time was Democratic by a majority of fifteen or twenty. After the failure of the contempt proceedings, as I remember it, the whole matter was dropped. I returned to China as United States Minister, and remained there for a year and a half or more."

UBERTO C. CROSBY, General Manager.

RICHARD D. HARVEY, Assistant General Manager.

"The Forty-fifth Congress was the first Congress after the Civil War with a Democratic majority, and in the campaign which elected it the cry was: 'Turn the rascals out!'"

"I had been instrumental in sending home several consular officers for misconduct, and five of them went before the Committee on Expenditures in the State Department with all sorts of charges against me, and the committee thereupon proceeded to investigate. It sent to China for wit-

nesses, books and papers, and carried on its investigations during the greater part of the first session and nearly all of the second session of that Congress, with the result already stated."

Mr. Seward's wide sympathies led him to join many associations. He was a member of the American Geographical Society, Academy of Political and Social Science, Institute of Civics, Electro-Chemical Society, American Peace Society, Chamber of

Commerce, Civil Service Reform Association, New England Society of Orange, N. J.; Historical Society of New Jersey, National Municipal League, Sons of Revolution and the Union College Alumni Association of New York.

Mr. Seward was Commander of the Dragon of Annam, a French order, and Commander of Daneborg, an order of the Danish Government. His clubs were the Lawyers, Authors and Reform.

President Liberty & Casualty Co.*

Merchants Accept Merritt's Invitation

FRANK R. CHAMBERS, Chairman of the Committee on Insurance of the Merchants' Association, has replied to a recent letter sent by Chairman Merritt, of the Legislative Investigating Committee, who offered the Merchants' Association the "opportunity to make complaint before the committee in regard to unjust practices—if there are any—on the part of fire insurance companies or their agents." In this reply Mr. Chambers has suggested as suitable subjects for investigation the commissions paid by fire insurance companies and the taxation of fire insurance companies. Mr. Chambers asserts that of the premiums paid by insurers from 5 per cent to 37½ per cent is paid by insurance companies as commissions to agents and brokers for securing business, which, together with the revenue taxes imposed upon the insurance business, increases the cost of insurance and hence the premiums paid by policyholders.

In his letter to Mr. Merritt Mr. Chambers says in part:

In the City of New York 5 per cent or 10 per cent brokerage is paid upon premiums derived from the central business district, increasing to 25 per cent in the case of residences, churches, etc. In other parts of the State many companies pay flat commissions to agents of 15 per cent, others pay 20 per cent or 25 per cent and an additional commission up to 10 per cent, contingent upon the profits on business secured. The large amounts so paid for commissions are, of course, included by the companies in the cost of doing business, which total cost must be provided out of the aggregate premiums derived from insurers.

In consequence these premiums are materially higher than they would be were the commissions gauged upon the scale of compensation to salesmen which usually prevails in other branches of business.

The great disparity between the cost of selling insurance and the cost of selling merchandise raises the question whether the existing system and scale of commissions do not impose an excessive and unnecessary burden upon the premium payer, without any corresponding benefit to the insuring companies, and whether the existing system might not be so modified as to materially reduce the loading which each policy now carries by reason of the large cost of commissions.

While this association is not prepared to assert that the present system of commissions is not a reasonable and proper adjunct of the insurance business, or to assert that it involves a large element of avoidable waste, to the detriment of policyholders, it submits that the subject might be inquired into by the Legislative Investigating Committee, in order that the facts may be fully developed and that if any unreasonable waste be found to exist a remedy may be devised.

This association calls attention to the heavy burden of special taxation laid upon insurance companies in this State, but actually borne by insurers, whereby the cost of insurance is materially increased. The imposition upon the business of insurance of taxes for revenue is opposed to sound principles of taxation. Ordinary taxes represent the payment to the Government of a part of the profit derived from the economic use of wealth. Taxes derived from an insurance fund represent an addition to the burden upon a community imposed by the destruction of wealth. It is wholly unjust that the fund exacted from the community to distribute the burden of destruction should be increased by governmental exaction.

The business of insurance, however, is one to which government regulation is applied on the theory that the business shall be safely and properly conducted and that those who contribute to the fund shall be

guaranteed the protection for which they pay. If governmental regulation is necessary, it may not be unreasonable that the cost of such regulation should be borne by the business of insurance and paid for out of the premiums derived from insurance. Any taxation of insurance beyond the sum necessary to pay the cost of regulation is unreasonable and unjust, and should be abolished.

At present a corporation tax is exacted from insurance companies under Section 187 of the Tax Law, from which the State derived during the last fiscal year \$1,236,973.53. Under Sections 33 and 34 of the Insurance Law, a so-called reciprocal tax is imposed upon companies of other States, the rate of said tax equalling the rate imposed by such other States upon the insurance companies of this State. The amount collected under these provisions was \$427,074.40. The local authorities of every municipality in the State having a fire department are likewise empowered to impose a tax of 2 per cent on the gross premiums derived from all insurance business transacted by foreign companies within that municipality. No data are available showing the aggregate amount of such local taxation. In the city of New York, however, during the last fiscal year the amount exacted under this special tax was \$301,577.05, which amount was paid for the benefit of the Firemen's Pension Fund.

The aggregate of the item cited above is upwards of \$1,965,000. The total cost of conducting the State Insurance Department, to which the regulation of insurance companies is intrusted, was about \$226,000 during the same period. Thus, after payment of all the expenses incident to regulation, the State derived a net revenue from the taxation of insurance companies of about \$1,739,000, exclusive of the probably considerable amount paid to local authorities for the benefit of fire department.

Owing to the varying rates of taxes imposed upon insurance companies of different classes, it is impossible to state the average percentage upon the aggregate of premiums represented by the foregoing total, but it is probable that the special taxes exacted amount to between 2 and 3 per cent. The

premium rates charged by insurance companies represent not only the amount necessary to meet fire losses, plus a reasonable profit upon the capital of the companies, but also represent and are based upon the expense of conducting the business, and of this expense the item of taxation is a large and important one.

In the course of the inquiry held during the current year by the Illinois Fire Insurance Commission there was

presented a tabulation of the taxation of fire insurance companies for the eighteen years 1891 to 1908, inclusive, showing the ratios of taxes to premiums less losses and expenses. This tabulation was compiled from official figures of the New York State Insurance Department and showed that, while the profit to premiums in the eighteen years had been only 3.06 per cent, the ratio of taxes to premiums had been 2.67 per cent, and

that the taxes paid in the period named aggregated an amount equal to 87.5 per cent of the profits derived from the business transacted.

As urged above, this excess of taxation is simply a burden upon calamity. The whole subject should, therefore, be carefully investigated by the Legislative Investigating Committee with a view to recommending legislation to modify or abolish these burdensome and objectionable taxes.

New York City Built Up by Speculators Aided by Life Insurance Loans

AT THE last meeting of the Business Science Club, in the rooms of the Aldine Association, Controller Walter Stabler, of the Metropolitan Life Insurance Company, told some 300 real estate men that almost all the present building operations in Greater New York were being conducted by speculative builders. The chief capital of these speculative builders is their faith in the city's inevitably increasing real estate values, and they finance their building operations by borrowing on mortgage from "lot operators," financial institutions and life insurance companies. The mortgages on practically all the big buildings are held by the life insurance companies, because, in Controller Stabler's own language, "the life insurance companies are the only people who have the money."

Mr. Stabler continued:

Real estate development in this city is different from that of any other city in the world. It is conducted by a class of persons known as "speculative builders." There are more of these speculative builders in this city than in any other. They buy lots and build houses on them by means of mortgages for the purpose of selling them. They are a type which never has much money. They buy the lot from another class of business man known as a "lot operator."

Lot operators are usually men of considerable means, who have bought their lots for cash. These lot oper-

ators then sell their lots to the speculative builders at an advance price, but for little or no cash payment. They take a mortgage on the lot and lend the speculative builder money to erect the building. When the building is completed the speculative builder raises a permanent loan of from three to five years on the house and lot through the title companies or other financial institutions at a fair rate of interest. With the money raised in this way the speculative builder pays the lot operator off.

Very recently building loan men have entered the real estate field here and speculative builders have had to have a little more money. The building loan associations lend the speculative builder enough to complete the building, but charge him from 2½ to 5 per cent interest. This is more expensive to the speculative builder.

When the speculative builders get loans from my company the interest charged is generally 6 per cent, and includes a mortgage on the land. We insist on having a first mortgage, and all the plans and specifications of the speculative builder's building have to be submitted to our architect. Our architect examines them and makes suggestions, and he and his inspectors keep inspecting the building in every stage of its construction.

New York is the most mortgaged city in the world. New York builders and real estate men have more nerve than those of other cities. They have supreme confidence in New York City real estate values, and to develop it use other people's money at low rates.

Savings banks by law can lend only

50 per cent of the appraised value of the property. Insurance companies can lend two-thirds of the appraised value and estates 60 per cent of the appraised value. Building loan associations lend from 80 to 90 per cent of the appraised value. Building loan associations have enabled many people of small means to own their own homes. In this city, however, building operations are so costly that the loans have to be made by the strong corporations. The large loans are almost always made by the insurance companies.

ST. LOUIS MEN GET UNITED SURETY CONTROL.

The stockholders of the United Surety Company, of Baltimore, at a meeting held this week, decided to change the corporate name of the institution to the American Bankers' Assurance Company. Application will be made immediately to the State Insurance Commissioner to change the name. A resolution was also adopted authorizing the increase of the capital stock from \$250,000 to \$600,000 by the issuing of 3,500 additional shares of the par value of \$100.

The announcement is made that the United Surety Company, which will be known as the American Bankers' Assurance Company, will be controlled by outside interests. Control has passed into the hands of a number of St. Louis capitalists, who will hereafter manage the company.

Insurance News in the West

CHICAGO, Nov. 30.—Announcement last week that J. H. Lenehan had resigned as Western general agent of the Fidelity-Phenix came as a surprise to Chicago fire insurance men, and yet not altogether so, for there was a belief more or less prevalent that his tenure of office was limited. As long ago as last December it was openly predicted that Mr. Lenehan would be retired. While the prediction was a long time coming true the signs pointed in the direction of its fulfillment. Other general agents of the old Phenix were cut off one after another, and there was no reason to expect an exception

to be made in Mr. Lenehan's case.

Mr. Lenehan resigned, but he did so only upon receipt of a letter from Vice-Pres. Kline stating his services would not be wanted after the end of the year, and that if he desired to resign now it would not put the company to any inconvenience. What Mr. Lenehan will do in the future is not yet known. He has been one of the big figures in Western fire insurance. As special agent, assistant general agent and general agent he has been recognized as a strong man. His associates have honored him by electing him president of the organization of which at the time he was a member—of the Illinois State Board as a field man and of the Western Union as a general agent.

In Chicago it generally is expected that Charles R. Street, assistant general agent, will become general agent. Mr. Street has been in the Western department of the Phenix and of the Fidelity-Phenix more than twenty-five years. His father was a Phenix man before him down in Mississippi. He is a fine underwriter, a splendid office man and a tremendous worker; in fact, he is regarded as a Henry Evans type of fire insurance man.

* * *

A special agent who for several years has travelled over a large Western field states that never before in his experience have local agents been so insistent in their efforts to make the companies accept bad forms. This tendency is not characteristic of any one part of his field alone, but of practically all of it. He is unable to explain it.

There apparently are two or three causes which may contribute to this condition of affairs. The tendency toward bad forms has been growing for some time. Unwilling for various reasons to deviate from advisory rates, and finding it constantly more difficult to keep up their premium incomes, some companies have been inclined to favor their agents by accepting forms which before they would have turned down.

Now that a large number of companies formerly bound by no commission rules are in the Western Insurance Bureau and in some cases have been obliged to reduce commissions to comply with its rules, agents naturally insist upon concessions in other directions if there is any hope of getting them. What the position of the bureau companies is on this question of "easy" forms cannot be stated—probably each has its own position, but it is known that one objection some of them had to joining the Western Union was that it would take from them their liberty to accept what forms they pleased.

Possibly another contributing cause is the competition local agents are

experiencing from city brokers. One of the strong cards of the brokers is their ability to draw forms favorable to the assured, and, by reason of the large business they do, make the companies accept them.

* * *

The official merger of the Northwestern Department of the Aetna at Omaha into the Western Department at Chicago occurred on Thanksgiving Day. General Agent W. H. Wyman, of Omaha, is now on the retired list after forty-eight years in the company's service, and General Agent Thomas E. Gallagher, of Chicago, now has one of the large departments of the West, with about 5,000 agents reporting to him.

It was fortunate in two ways that this merger took place at this time. While most of the experienced employees of the Omaha office were brought to Chicago a number of junior clerks and boys were left behind. This was just the class of help the North British and Mercantile left behind in Chicago when its Western Department was moved to New York a few weeks ago. This enabled many of these North British people to find employment with but little loss of time, and saved the Aetna the trouble and expense of breaking in a number of utterly inexperienced subordinates.

The moving of the United States Department of the Sovereign Fire to New York throws out a few employees here, but the office had not yet grown large enough to employ many people.

* * *

The decision of the People's National to write hail insurance in the Northwest next season will doubtless result in large additions to that company's fire business in the Dakotas and thereabouts. Hail companies are as much in demand there as farm companies are in some other Western States. Only about half a dozen stock companies write hail insurance.

* * *

In some parts of the West there is very serious complaint of want of co-operation in the field. A Wisconsin State agent said recently that co-operation in that Commonwealth is almost unknown at present. There is more or less talk of the same kind in other States also. The field men have been having a hard time in some ways this year. As recently published, two or three Western departments have made a careful tabulation of their business and found that they have increased their liability to a considerable extent while the premiums have increased only a little or have even decreased. Managers have admitted that until they saw the figures they were tempted to believe that some of their competitors were getting their business by unfair means, but they find that it is

the natural result of the improvement of risks they have been feeling. Municipal improvements, introduction of better construction and of sprinklers and other betterments of individual risks are reducing premiums faster than new business is increasing them.

The field man in his smaller sphere has felt the same thing. In spite of his best efforts the premium income would not show any marked advance. In some cases he may have become suspicious and in some he may himself have resorted to unapproved methods in an attempt to increase his business. With a practically stationary premium income the heavy losses some companies have sustained in the West have been magnified in the loss ratio as against what they would have been if premiums had increased rapidly. Apparently, then, some field

men have neither increased their business nor held down their loss ratio, a discouraging state of affairs, for which in most cases they probably are not responsible.

* * *

Chicago surety men are beginning to do some speculating as to the amount of corporate surety banks will give the city for protection of its deposits. For several years there has been a constant tendency to consolidation evident among the banks. It has happened that in the various mergers those banks accustomed to give personal bonds for protection of city deposits have had the preponderating influence. Thus the American Trust and Savings Bank used to give corporate bonds, and the Continental National gave personal ones. When they got under one control, no cor-

porate bonds were given. In the past the Commercial National has given corporate bonds at least in part. This year it has become a part of the Continental National, and it is a question whether that bank will give any corporate bonds for next year's deposits.

City Controller Wilson is very desirous of getting a higher rate of interest for the city if possible and with that end in view suggested recently accepting bonds for a smaller amount than in the past. When the surety companies raised the depository rate from 25 to 50 cents, the banks cut down their bids on interest from 2½ to 2 per cent because of the higher cost of bonds and then many of them gave personal bonds and were ahead one-half of one per cent on the deposits they secured. LA SALLE.

Life Companies and Railroad Rates

AT A hearing last Saturday before the Interstate Commerce Commission in Washington on the application of the railroads to increase freight rates George E. Ide, President of the Home Life of New York, appeared. Mr. Ide's address follows:

The decision of the question now before this Commission will have a potent influence upon the future earnings of our railroads, and upon these earnings will depend the value of their securities.

I appear for the life insurance interests, which represent an aggregate holding of railroad securities far beyond what is ordinarily believed. For whom are these securities held? The assets of life insurance companies represent accumulations to provide a reserve required by law against each policy, and also a surplus fund held for future contingencies. In all companies the reserve fund is distinctly maintained for the protection of each individual policy. The surplus fund belongs in part or whole to the policyholders according to the character of the organization. In mutual companies it is entirely theirs. Let

me cite a specific case to make my meaning clear.

In the company with which I am connected the total admitted assets are \$23,600,000. Of these assets \$6,400,000 is invested in mortgage bonds, \$8,160,000 in railroad bonds and \$705,000 in railroad stocks. Thirty-seven and one-half per cent of the company's total assets is invested in railroad securities. About 45,000 policyholders are the real beneficiaries and practical holders of these securities. It is not an intangible, vague corporation which owns these bonds for the benefit of a few wealthy stockholders. The bonds are held sacredly in trust for 45,000 citizens scattered over the entire United States. These are the facts concerning only one of the companies, and a small one at that.

It is said that if by reason of your action the earning power of railroads should fall below the requirements for dividends and fixed charges under existing or future conditions the only sufferers would be the stockholders who would receive a reduced dividend. This is not a full statement of the case. The value of any prior lien is affected by the margin of safety over the lien. Take a mortgage loan

on real estate. It is common practice to loan, say, \$60,000 on a conservative valuation of \$100,000. Suppose some law were to be enacted or some new condition created which should reduce the value of real estate so that this property, originally worth \$100,000, should be only worth \$80,000. In the first case the margin on the loan is \$40,000. Under the new conditions that margin would only be \$20,000. The value of the investment is impaired, and yet the owner may continue to pay his interest. It is not necessary to wipe out all of the margin before the value of the security is affected. Why is it that so many of our States have laws requiring that a railroad company must pay dividends on its stock for a given number of years before its bonds shall be a legal investment for savings banks, unless it is because it is generally believed that by such a record of dividend earning power the value of the underlying security is enhanced.

In investments for life insurance companies the trustees of these funds seek safety, satisfactory interest return and stable values. It is also of extreme importance to secure long term investments if possible. It is a

GEORGE F. SEWARD, President.

Robert J. Hillas, V.-P. & Sec'y. Henry Crossley, Asst. Sec'y. Frank E. Law, 2d Asst. Sec'y. Geo. W. Allen, 3d Asst. Sec'y.

trite axiom that credit is based largely on sentiment. If there is, for any reason, created in the mind of the financial world the slightest suspicion that our railroads cannot earn a fair living, then credit will be at once impaired, for buyers of these securities will not be found.

I am not here to plead for the holders of junior securities, although they have their rights, but I do not wish to impress upon your minds the fact that if distrust were created the bonds, the underlying securities, will be injured in their value. Who will suffer? As

nearly as I can learn, of the entire bond issues of the steam railroads of this country amounting to \$9,118,000,000, the life insurance companies doing business in the State of New York hold \$1,139,000,000, or one-eighth of the entire railroad bond issues of the country. There are about 20,000,000 policyholders in these life insurance companies, and they are all collectively and individually interested in the integrity of this investment. Any move which even sentimentally affects unfavorably the railroads of the land will strike a blow at these securities which will affect this vast army of thrifty citizens. It is not necessary to reduce railroads to a condition of bankruptcy before the value of the underlying securities is affected. For those policyholders I therefore appear. They are not able to plead for themselves.

I know that in your deliberations you are giving to this momentous question the most careful thought and investigation, but it seems to me of vital importance that in arriving at a sound conclusion one should not overlook the fact that a false step at this time will affect seriously a vast

number of our citizens who, unable individually to make their own investments in securities of railroads, are yet indirectly but intimately interested in their prosperity and well being, and further that your action will be considered as a precedent to guide the commissions of our several States in their consideration of similar problems. The shipper, the jobber, the salesman and consumer all have rights of paramount importance, but the policyholders and savings banks investors must also be considered, for their interests are already vested in securities which have been purchased for their protection and profit, which were wise and conservative investments on the part of their trustees at the time they were made. The individual investor has his rights as well, but he is able to appear for himself. Under our general economic system the small saver who may become the future capitalist is a partner in these enterprises. Anything which affects unfavorably the prosperity and extension of our railroads will ultimately be felt by him, and his welfare is of vital importance to the upbuilding of our nation.

First National Promotion

THE following statement was issued last Friday by the New York State Insurance Department for publication:

The investigation by the New York Insurance Department of the Fire Securities Company of New York and the First National Fire Insurance Company of Pennsylvania, which when begun in July last developed only the fact that these companies, then recently organized, had not actively begun operations, was resumed a few days ago. Such action was based upon information that the President and Secretary of the Fire Securities Company, the former a resident of New York, had resigned and that the promoters of the company, residents of Pennsylvania, were forming or had formed the Fire Securities Company of Delaware. It is thought that it is the intention of such promoters to transfer the assets of the New York corporation to the new Delaware corporation of the same name, and thus to escape departmental examination under the new New York law permitting the Insurance Department to examine promoting companies of this class.

"On the examiners of the department proceeding to Harrisburg (the present home office of the company) early this week for the purpose of examining the books, accounts and financial transactions of the Fire Securities Company of New York, such examiners were refused access to such books by W. W. Abbott, of Harrisburg, who stated that he was the Vice-President of the company, and F. B. Maccarthy, its local counsel, the latter stating that the company had a big deal pending and would not permit

the examination until after such deal was consummated. He did not state whether the deal referred to was with the new Fire Securities Company of Delaware.

"The First National Fire Insurance Company of Pennsylvania seems as yet to be merely a name, though it expects to have \$500,000 capital and \$500,000 surplus. For reasons above indicated, however, the department cannot as yet give accurate information as to the transactions to date of the Fire Securities Company of New York. It apparently is, however, but a promoting company of the class brought to public attention by recent examinations of the Insurance Department. It seemingly was organized merely to accumulate through the sale of its stock to small investors a sufficient fund which, after deducting a considerable promotion expense, would be used in purchasing the stock of the Fire Insurance Company. The capital of the Fire Securities Company is \$1,000,000, consisting of 100,000 shares at \$10 a share. Thus far such stock has been sold in part at par and in part at a premium of \$2.50. From the best information obtainable, about \$40,000 has been paid into its treasury for stock, and of this sum from \$20,000 to \$25,000 has been already disbursed in expenses. Its President, Charles S. Barker, of Brooklyn; its Secretary, Charles White, of Llanarch, Pa., and its counsel, Charles W. Ridgway, of 100 Broadway, New York, who were its three incorporators, have all resigned. Its refusal to permit proper investigation of the books, standing and methods is, for the above reasons, thought to be significant."

In New England

BOSTON, Nov. 30.—A. C. Adams, manager for Boston and the metropolitan district of the Aetna Insurance Company, died last Thursday evening in the Hotel Touraine. Mr. Adams was born in Barnstable, Mass., thirty-three years ago. After leaving school he was for a brief time engaged in mercantile business. In 1865 he entered the service of the Howard Insurance Company of Boston as a clerk, and stayed with that company until 1872, when advancement came to him with the Globe, also a former Boston company, of which he became Assistant Secretary. In 1877 he transferred his services to the Liverpool and London and Globe as its New England special agent, and as such developed a fine capacity and large acquaintanceship as a field man. In 1891 he entered the service of the Aetna, taking charge of its New England field, and in 1897 was appointed Assistant Secretary of the company at its home office in Hartford. Here he remained until 1907, and then returned to Boston, taking charge of the company's local office in succession to the late B. B. Whittemore, and held this position till the end. He had been an active and influential member of the New England Insurance Exchange, and that body, as well as the Boston Board of Fire Underwriters, has appointed committees to prepare tributes to his memory, and were represented at the funeral, which took place on Sunday afternoon at Mount Auburn Chapel, Cambridge. Among those present also were: H. E. Rees, Secretary; Guy Beardsley, A. N. Williams and E. J. Sloan, Assistant Secretaries, and H. L. Hiscock, R. S. Ives and F. W. Mathews, special agents in this territory of the Aetna. Mr. Hiscock is in charge of the Boston office of the company for the time being.

New England Brevities.

The Standard Insurance Directory for New England, 1910-1911 editions,

has been received and commands our thanks. All the valuable features which have distinguished this useful compilation in past years, are excellently maintained, only this year there are seventy pages more of them than last. The Directory grows with the growth of the business, and is worth many times its price—\$2 a copy—to any one concerned in the underwriting interests of this section.

The Swiss National Fire of Zurich was last Friday admitted to Massachusetts to do a reinsurance business, with Simmons & Wetherbee as Boston representatives. Also the Michigan Millers' Mutual of Lansing, with similar authorization and Edmund Winchester as Boston agent.

The New England Insurance Exchange has appointed Gayle T. Forbush, W. F. Rice, C. D. Palmer, F. A. Wetherbee and F. H. Battilana a nominating committee, under the amended by-law, to propose officers for 1911.

The committee on 1911 nominations appointed by President Edward Marsh, of the Boston Life Underwriters' Association, comprises F. S. Sanborn, John E. Voodry and H. N. Haven.

We are indebted to Charles B. Wheelock, President of the Boston Board, for an extremely tasteful calendar for 1911.

"Liability for Industrial Accidents: How Shall This Burden Be Distributed?" was discussed before the Massachusetts Reform Club last Friday by Miles M. Dawson, of New York; George W. Anderson and James A. Lowell, of Boston, and W. W. Alexander, of Lynn.

The Boston Board, at its meeting on Tuesday, adopted a tribute to the late A. C. Adams. Action on the proposition to advance rates on three-

flat tenements was on the calendar, but was deferred.

The officers and agents of the Massachusetts Accident will convene at the home office, Boston, Wednesday and Thursday of next week to celebrate the twenty-seventh anniversary of the company's organization. THE CHRONICLE is indebted to President McNeill for an invitation to participate in the proceedings and festivities.

Action on moving picture rules, scheduled for last Saturday's meeting of the New England Insurance Exchange, was deferred to a later date.

George E. Hill, of Boston, has been appointed special agent for New England of the Citizens of Missouri.

The Union and Fenix Insurance Company of Madrid, Spain, was on Tuesday admitted to do a reinsurance business in Massachusetts.

The Moral Hazard

SAMUEL R. WEED delivered an address on "The Moral Hazard" before the New York Insurance Society at its last meeting, in the course of which he said:

What is that intangible but important part of fire risk which is commonly called the moral hazard? It exists in other lines of business, and, in fact, it is omnipresent in all vocations where financial responsibility is involved and is frequently a synonym for a form of dishonesty. If we hear of a bank, or a stock broker, or a merchant who is dishonest, we frequently describe his condition as overburdened with "too much moral hazard." Consequently we must understand at the outset that moral hazard is a risk which to a greater or less extent permeates all kinds of business. It is the same as short weights in the grocery or coal yards; it is the same as misrepresentation in merchants' transactions or downright fraud in manufacturing, or any other dishonest proceeding to deceive the public on the part of the man who has something to sell and finds a market among the innocent purchasers. In the majority of cases there are some ways of discovery and detection, and often of punishment, but in fire insurance the moral hazard risk goes down much deeper because it is a long drawn out process of crime which may be conceived months or years before it is actually committed and it is more generally suspected than proved. It is, however, sometimes confirmed by circumstantial evidence, but even then the victim has no redress. It is intangible because we have to search into the inner motives of man and go below the surface before finding any important proof. Attempts to describe it in general terms have often been made, but the difficulty of a description applicable to each case is increased by the fact that no two instances are precisely alike.

Almost the earliest thing I can remember in my training as an underwriter was the repetition of the caution, "beware of moral hazard." I began writing policies in St. Louis in January, 1865. Almost every letter of instruction from the three companies I represented contained the same remark, "Look out for the moral hazard." I will recollect the advice given me by the late Alexander Stoddart, of the New York Underwriters' Agency, in 1866, when this agency was composed of the Niagara, Germania, Hanover and Republic. Mr. Stoddart came to St. Louis for a few days and, much to my delight appointed me his agent. As that was the most important company I had then received, we had a long talk together, in which I tried to excuse my inexperience. He was very lenient with me. I am now reminded by this remembrance, of the encounter that my wife once had with a sprig of female nobility from Ireland who applied to her for a situation as cook. My wife asked her if she knew how to cook various dishes, and her invariable reply was, "Begorra, if I don't know now I will learn." That

would have been a fitting answer to Mr. Stoddart on the occasion referred to, but I did not dare to give it. The constant urging upon the agents the importance of avoiding the moral hazard has probably been as much a puzzle to new agents who have been appointed since that date as it was to myself forty-five years ago.

For many years it has been observed that the majority of proofs of loss received by the companies, certified by the adjuster, refer to the origin of fires as "unknown," or "cause not ascertained," or an equivalent word expressing the negative suggestion. This fact has given rise to the suspicion that a large proportion of fires thus accredited is crooked. Of course it is a hasty judgment in the absence of any ascertainable evidence, but after due allowance is made for the manifest injustice of a sweeping charge against all the "unknown origin" cases it is probably true that a considerable percentage of these claims has a moral hazard basis, which cannot be detected. Yet to be fair in such wholesale judgment it must be admitted that where fires are of mysterious origin and the insured cannot honestly explain them he takes refuge in the "unknown class" where so many similar cases have found lodgment, rest and oblivion. I am impressed with the conviction that non-ascertainable causes are diminishing. The committee on losses and adjustments of the New York board have insisted upon a more vigorous effort being made to learn the causes of fires. In the printed bulletins which now accompany the service of loss proofs the result of this effort is shown in the increased explanations of the origin of fires. The adjuster by a severe cross-examination of all parties concerned more frequently arrives at a suspicion or conclusion as to the origin than formerly, when there was less effort to ascertain the facts. Still it must be admitted that the record is blurred by repeated statements of "cause unknown," and it seems as though there were yet cases of moral hazard covered up under this term. The probability is that most culpable carelessness has led to fires without any dishonest intention on the part of the owner or his employees, and the owners are generally unwilling to put themselves on record by admission of any carelessness at all. Yet from our standpoint the carelessness was an important phase of moral hazard, only slightly removed from premeditated design.

I presume you will be surprised when I assert that there is a new kind of moral hazard affecting the business of fire underwriting now in vogue, quite unknown twenty-five years ago. I mean a sort of reverse action of the moral hazard principle succeeding a fire, quite apart from its origin. I believe the experience of the last twenty years has demonstrated that many an honest loss has been turned into a dishonest loss by the temptation, or whatever else you chose to call it, to indulge in crookedness directly aroused by the fire. Somehow the underwriters are often

treated as easy marks, who can be plundered by fraudulent claims and robbed of large sums by schemes to cover up the real loss with a layer of fraud which sometimes escapes detection. I believe that the discovery of such schemes is generally possible through patience and perseverance, as well as by skilful handling of the testimony. Some very remarkable evidences of this kind of moral hazard have been gathered by our loss committee, and the former manager, Mr. Robb, could, if he would, tell you of one very extraordinary case in the surrender of policies for a large amount upon a stock of plate glass in this city, without any payment at all, after a most elaborate scheme of fraud had been prepared, which was exposed by accident. One of the links in the chain was weak and that broke down all the connecting links. I am obliged to withhold the particulars of this case, but I believe it was one where the rascality really followed the fire.

Now, having, as it were, diagnosed the disease, what is the remedy? I know of no quack nostrum which can prevent or cure it. But, as Abraham Lincoln once said when he was asked about how to end the Civil War, "We must keep pegging away." We have plenty of laws against grand larceny, but the crime continues with little or no diminution. We have ample law against arson, and the companies offer large rewards for the arrest and conviction of incendiaries, but the crimes do not lessen materially. It appears that during the year ending December 31, 1909, there were forty-two arrests in New York City for arson, with eight cases carried over from a former year. Of these fifty-two cases only seven were found guilty; twenty-three were discharged by the Magistrate; nine were acquitted on trial, and in two cases indictments were dismissed. In Brooklyn for the same period there were forty-four arrests and eleven pending cases at the end of the year. Out of these fifty-five there were fourteen convictions and only seven discharges. The Grand Jury failed to indict in four cases, but at the end of the year there were twenty-five cases still pending. This is not a very encouraging outlook as far as incendiarism is concerned; but the fact is that the public generally is indifferent to arson where the insurance companies are affected, and we often hear it said, "Why don't the companies catch the criminals and have them punished?" There appears to be a sort of antipathy to any serious attempt to stop the crime of arson by the public authorities. In the State of Louisiana it is said that incendiaries are never convicted, even where the proof is clear, and the reason is that in Louisiana there is a death penalty for the crime. In our own State when incendiarism was rife a few years ago in the City of Rochester there was a loud call for severer penalties upon guilty parties. The press and public authorities of Rochester joined in the demand, but it came about that the proposition for severer punishment aroused a doubt whether or not the chances for conviction would not be less with a severer penalty than under the law as it now stands. After all, the real losers in the game were the underwriters. Such heresies are not

uncommon, but I am in doubt whether mercy to a red-handed incendiary is either expedient or justifiable.

Well, then, what can be done? Or, in the language of the notorious "Bill" Tweed, when his system of looting the city treasury was exposed, "What are you going to do about it?" Tweed soon learned that something could be done about it, and forthwith was done in a fashion that sent him to jail, and, after his escape, into exile. Eternal vigilance is the only effectual remedy for moral hazard. I imagine that many underwriters who have given serious thought to the subject believe that nothing can be done which will throttle it. It belongs to a class of crime which it seems impossible to extirpate.

On the corner of Third Avenue and 183d Street, in this city, there is one of the most magnificent benevolent enterprises in the world. It was founded by private benefactors, and is to-day largely sustained by voluntary contributions, only slightly augmented by public funds. It is called "The Home for the Incurables." I wish it were possible to idealize the invisible and intangible thing we call moral hazard into a living reality in order that we might treat it as a disease from which we all suffer, and consign it forever to a "Home for Incurables," where it might repent and die, leaving no descendants. If, indeed, this moral hazard is a disease that at times seems to spread like an epidemic, and we can neither arrest, control, extirpate or punish it by process of law, and the underwriters must go on forever paying large sums for moral hazard losses, we then have only to fold our hands and wish for better things. It seems to be a product of dishonest natures, and there is no remedy for it. But we can at all events apply the advice given by Henry Ward Beecher when one of his parishioners asked him what he thought of the doctrine of total depravity, Mr. Beecher answered: "I advise you not to try it." And so with moral hazard. It is so costly and dangerous we must not relax our efforts to kill it. To those who come after us we may advise them to continue in these efforts, and to the scoundrels who threaten us with losses we may advise them "not to try it."

"The Leading Fire Insurance Company of America."

The Prudential Report

THE report of Fackler & Fackler on the investigation of the Prudential Insurance Company, which covered a period of several months, has been submitted to the New Jersey Insurance Department, bringing forth strong commendation from the Insurance Commissioner for what is termed "the highly satisfactory and creditable showing it makes for the institution and those identified with its management." These experts were selected by the Insurance Department to examine into the affairs of the Prudential and to test the accuracy of the company's last annual statement.

The examination covered every phase of the company's business, and the progress made during the three years since the last investigation is best typified by the statement that the company's assets have advanced from \$127,000,000 to over \$200,000,000, or more than 57 per cent, while the insurance in force has increased from over \$1,200,000,000 to over \$1,700,000,000, this vast increase certainly justifying the examiner's statement that the company had shown a "remarkable growth in all respects."

The cash in the company's offices was counted at the close of business on December 31, 1909, and seals were placed upon the bonds and stocks owned or held as collateral by the company, the examination of these securities alone, which were all investigated carefully, requiring nearly a week. The proportion of government and municipal bonds owned by the company showed a marked increase, while the amount invested in stocks represents but 1½ per cent of the company's assets. These stock holdings consist of trust company and

national bank stocks exclusively. The examiners noted that the proportion of cash on hand and in banks was but little more than one-half of the amount shown in the examination made six years ago.

The Prudential owns and holds some of the most valuable property in Newark's business centre. This has increased materially in value since its purchase by the company, in some cases two or three times over the original cost. The appraisal of the incompleting addition to the North Home Office Building was a problem for the examiners. After thorough investigation, with the assistance of an architect of very large experience, the examiners allowed as an asset the book value, as stated by the company. It is interesting to know that the value of the real estate held by the company for office purposes has increased from about \$11,400,000 to \$13,000,000, which is mainly due to the above addition referred to, made necessary by the requirements of its office force. The company believes this will provide available office space for many years to come. A side light on the judgment displaced in the company's real estate investments was shown in the fact that the sales from the few foreclosures which the company was compelled to make on its real estate holdings during the last three years have realized an average of about 5 per cent more than the book values of the properties involved.

When the State examiners began to check up the policy section of the company's business they found that the Prudential had over 8,000,000 industrial policies in force, representing insurance in excess of \$1,000,000,000. Great numbers of these policies

were tested and the records found to be accurate in every respect. The Prudential carried at the end of 1909 over \$650,000,000 of ordinary insurance, and in order that the examiners might investigate this ordinary business without interfering with the daily routine of the company, it was necessary to write up 74,000 cards for their use. Daily reports of premium collections and the essential details of policy records were tested, covering several years of issue, without any material errors being discovered, and the fact that the company carried on its books all policies on which premiums are being collected was well shown.

The Prudential's assets, as reported by the company at the end of 1909, was over \$200,600,000, but the Insurance Department's examiners give the company credit for nearly \$1,000,000 additional assets, the increase being due principally to real estate holdings which are valued by the Insurance Department at about \$1,000,000 in excess of the amount for which the Prudential had taken credit.

In addition to this item the department examiners also allow the Prudential additional surplus amounting to over \$500,000, making the total surplus \$16,722,580.

Chronicle Paragraphs

WILLIAM LANAHAN, head of the firm of William Lanahan & Sons, of Baltimore, will become President of a new fire insurance company.

The Vice President will be Jacob A. Ulman and the Secretary and Treasurer John G. Binford. Directors for the company, who will be suggested at the meeting for organization, were decided upon Saturday. These are all subscribers to the stock and will be practically in control. They are: William Lanahan, Jacob A. Ulman, William A. Boykin, John G. Binford, Ferdinand Meyer, James H. Preston, John R. Bland, Henry F. Westheimer, David G. Rosenheim, H. P. Goldsborough, William P. Cummings, all of Baltimore; A. J. Sunstein, Pittsburg; Charles F. Brice, J. Hazelton Carstairs, H. J. Bissenger, all of Philadelphia; Harry Eising, of New York; J. Walter Freiberg, Cincinnati; Louis Rosenfield, Thomas C. Deneberg, of Chicago; Bernard Bernheim, Louisville. The capital stock will be \$500,000, with a paid in surplus of \$250,000. The new company will be known as the Merchants' Fire Insurance Co. of Baltimore. It is primarily intended to insure distillers, but will also do a general business.

* * *

"New York may have a fire as deadly as the one in Newark at any time," declared Edward F. Croker, chief of the New York Fire Department this week. "We may take every precaution, make every examination we can, but the best we can do is to hope that we will escape such a calamity. We have in New York the same diversified industries in the same building, and there in no way to prevent it. The fire rules prevent the storing of gasoline or any combustible material, but a fire started from any other cause would sweep through any one of the many buildings and probably cause a loss of life. But no one can say to the owner of a building that a tenant engaged in any line of business cannot occupy the top floor of a building because the stock carried is inflammable and there is risk to the persons working there. The insurance companies can increase the insurance rates, but they cannot do more than that."

* * *

Presumably in connection with the purchase of the Railway Passengers' Assurance Company, the Directors of the North British & Mercantile Insurance Company propose to offer £1,056,898 of 4 per cent preference stock at par to present shareholders, in proportion to their present holdings.

* * *

The cost of maintaining the Michigan Insurance Department for the

year ended June 30, 1910, was \$22,499, while the receipts amounted to \$515,583. Of this amount the primary school fund was enriched to the extent of \$483,119, while \$32,464, which includes retaliatory fees and receipts from assessment, life, accident and sick benefit associations, was turned into the general fund of the State.

* * *

An appeal will be taken in the case of the twenty officers and committeemen of the Southeastern Underwriters Association found guilty of increasing fire insurance rates in Newport News, and fined \$400 each, by a jury drawn from Southampton County, in the corporation court. Those convicted were: A. H. Harris, secretary of the Virginia committee of the association; L. R. Warren, chairman of the Virginia committee; William R. Robbins, E. H. Jones and A. M. Travers, of Richmond; B. A. Hamlin, of Danville; members of the Virginia committee; W. R. Prescott, president of the association; A. B. Andrews, manager; Daniel B. Harris, Guy Carpenter, George H. Collins, A. L. Brooks, R. N. Hughes, R. T. Caldwell, J. S. Middleton, and H. N. Tanner of Atlanta, Ga.; Dana Blackmar of Columbus, Ohio; H. C. Hare of Jacksonville, Fla.; and R. J. Smith of Charlotte, members of the executive committee.

* * *

The Columbian National Life Insurance Company of Boston announces the election of William C. Johnson as Vice-President and General Manager. Mr. Johnson has been for many years the manager of the Phoenix Mutual Life in New York. His services in safeguarding agency interests at the time the reform legislation was being considered in New York, and since in support of every movement for the betterment of the insurance business, have made him known to insurance men of all classes.

* * *

At a meeting of the Board of Directors of the Southwestern Life Insurance Company in Dallas, Texas, the following by-law was adopted for the government of the company: "It shall be the duty of the Finance Committee to so invest the funds of the company so that it shall have invested at all times in the securities of each State in which it is transacting business at least 75 per cent of the legal reserve on all its policies in force upon the lives of citizens of such State." By this action the Southwestern Life Insurance Company adopts the principle and thereby voluntarily subjects itself to the requirement that the investment of its funds shall be so distributed as to enable the citizens of any State in which the company may transact business to "keep home money at home" by insuring with it,

PROOF OF PUBLIC CONFIDENCE

This company has more premium paying business in force in the United States than any other Company, and for each of the last 16 years has had more New Insurance accepted and issued in America than any other Company.

The number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one), and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Cincinnati, San Francisco, Pittsburg, Baltimore, New Orleans and Buffalo.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
For these purposes the "select and ultimate" will be most useful.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.

Philadelphia Casualty Changes Hands

SYNDICATE composed of J. Arthur Nelson and William Hugh Harris, of Baltimore, and Herman Hoopes, of Philadelphia, has just purchased a controlling interest in the capital stock of the Philadelphia Casualty Company, of Philadelphia, from the Fidelity Mutual Life Insurance Company, of Philadelphia, and John Pitcairn, of Pittsburg. A similar offer has been made to the minority shareholders. Mr. Nelson is Vice-President and Mr. Harris is manager of the casualty department of the Fidelity and Deposit Company of Mary-

land, and Mr. Hoopes is the Resident Vice-President of the same company for Philadelphia. The purchase is made in the interest of the Fidelity and Deposit Company of Maryland, which company has recently begun writing casualty and liability insurance.

It is understood that the outstanding risks of the Philadelphia Casualty Company, with the exception of the credit business, will be reinsured by the Fidelity and Deposit Company after January 1 next, and it is the purpose of the Fidelity and Deposit Company to take over probably the entire agency field force of the Philadelphia Casualty Company, as well as the of-

fice force and the department managers in the home office and branch office of the Philadelphia Casualty Company. President Walter LeMar Talbot, of the Philadelphia Casualty, is Vice-President of the Fidelity Mutual Life, and it was impossible for him to give attention to both institutions, so it has been known for some time that something would be done by him in regard to the casualty institution.

The contract of the purchasers is guaranteed by the Fidelity and Deposit Company, and in a short time the stock will be transferred and representatives of the Fidelity and Deposit put on the Philadelphia Casualty's Board of Directors.

Robert J. Hillas Succeeds George F. Seward

AT A special meeting of the Board of Directors of the Fidelity and Casualty Company yesterday Robert J. Hillas, Vice-President and Secretary, was elected to the position of President of the company, made vacant by the death of George F. Seward last week. The Directors also elected Frank E. Law, at present Second Assistant Secretary, to be Vice-President of the company, succeeding to Mr. Hillas's position. The action of the Directors was unanimous and was

influenced by the high regard which both the men promoted held. The fact that the home office staff and the agency force both presented a memorial to the Directors urging such action had a very pleasing influence, but the course had already been decided upon by a committee of directors at a session held on Tuesday.

Robert J. Hillas has been with the Fidelity and Casualty all his business life, having entered the service of the company at the age of seventeen and steadily worked his way up.

Frank E. Law was graduated from the Stevens' Institute of Technology, receiving the degree of mechanical engineer in 1892. In 1891 and 1892 he was employed in the machine shops of W. D. Forbes & Co., in Hoboken, N. J., and from there he entered the service of the Fidelity and Casualty Company. He was connected with the steam boiler and elevator departments until 1889, when he was appointed Actuary of liability lines, and a year later was further promoted to the Assistant Secretaryship.

Old Trustees Vote Morgan Stock

AS J. P. Morgan is not yet ready to announce his plan for the disposition of the majority stock in the Equitable Life Assurance Society, which he bought from Thomas F. Ryan, the election of Directors of the society was held yesterday under the plan in force since the voting trust was formed after the Armstrong investigation. There was

the difference, however, that ex-Judge Morgan J. O'Brien and George Westinghouse, the remaining trustees, voted only the stock holdings of Mr. Morgan, and the policyholders themselves voted their own proxies.

It was learned yesterday that there have been frequent conferences recently between Superintendent Hotchkiss of the State Insurance Depart-

ment and representatives of Mr. Morgan, and the plan for the new disposition of the stock is nearly ready to be made public. George W. Perkins, of J. P. Morgan & Co., said yesterday:

"I don't think we will have to keep you waiting much longer."

The old Directors were re-elected and G. E. Tarbell and Alfonso de Narvarro were chosen to fill vacancies.

Workmen's Compensation Convention Between France and Great Britain

IN VIEW of the importance just now of the subject of workmen's compensation, the convention between France and Great Britain in regard to it has great interest here. The text of the convention which has just been ratified follows:

Article I.—British subjects who meet with accidents arising out of their employment as workmen in France, and persons entitled to claim through or having rights derivable from them, shall enjoy the benefits of the compensation and guarantees secured to French citizens by the legislation in force in France in regard to the liability of employers in respect of such accidents.

Reciprocally, French citizens who meet with accidents arising out of their employment as workmen in the United Kingdom of Great Britain and Ireland, and persons entitled to claim through or having rights derivable from them, shall enjoy the benefits of the compensation and guarantees secured to British subjects by the legislation in force in the United Kingdom of Great Britain and Ireland in regard to compensation for such accidents, supplemented as specified in Article V.

Article II.—Nevertheless, the present convention shall not apply to the case of a person engaged in a business having its headquarters in one of the two contracting States, but temporarily detached for employment in the other contracting State and meeting with an accident in the course of that employment, if at the time of the accident the said employment has lasted less than six months. In this case the persons interested shall only be entitled to the compensation and guarantees provided by the law of the former State.

The same rule shall apply in the case of persons engaged in transport service and employment at intervals, whether regular or not, in the country other than that in which the headquarters of the business are established.

Article III.—The British and French authorities will reciprocally lend their good offices to facilitate the administration of their respective laws as aforesaid.

Article IV.—The present convention shall be ratified, and the ratifications shall be exchanged at Paris as soon as possible.

It shall be applicable in France and in the United Kingdom of Great Britain and Ireland to all accidents happening after one month from the time of its publication in the two countries in the manner prescribed by their respective laws, and it shall remain binding until the expiration of one year from the date on which it shall have been denounced by one or other of the two contracting parties.

Article V.—Nevertheless, the ratification mentioned in the preceding article shall not take place till the legislation at present in force in the United Kingdom of Great Britain

and Ireland in regard to workmen's compensation has been supplemented, so far as concerns accidents to French citizens arising out of their employment as workmen, by arrangements to the following effect:

(a) That the compensation payable shall in every case be fixed by an award of the County Court.

(b) That in any case of redemption of weekly payments the total sum payable shall, provided it exceeds a sum equivalent to the capital value of an annuity of £4 (100 francs) be paid into court, to be employed in the purchase of an annuity for the benefit of the person entitled thereto.

(c) That in those cases in which a lump sum representing the compensation payable shall have been paid by the employer into the County Court, if the injured workman returns to reside in France, or if the dependents resided in France at the time of his death or subsequently return to reside in France the total sum due to the injured workman or to his dependents shall be paid over through the County Court to the "Caisse Nationale Française des Retraites pour la Vieillesse,"

who shall employ it in the purchase of an annuity according to its tariff at the time of the payment, and, further, that in the case in which a lump sum shall not have been paid into court, and the injured workman returns to reside in France, the compensation shall be remitted to him through the County Court at such intervals and in such way as may be agreed upon by the competent authorities of the two countries.

(d) That in respect of all the acts done by the County Court in pursuance of the legislation in regard to workmen's compensation, as well as in the execution of the present convention, French citizens shall be exempt from all expenses and fees.

(e) That at the beginning of each year His Majesty's Principal Secretary of State for the Home Department will send to the "Département du Travail et de la Prévoyance Sociale" a record of all judicial decisions given in the course of the preceding year under the legislation in regard to workmen's compensation in the case of French citizens injured by accident in the United Kingdom.

Eastern Union Plans

RECOMMENDATIONS of the Committee of Seven of the Eastern Union for the readjustment of brokerage and agency commissions in excepted and non-excepted territory were adopted at the meeting of the Union at the Waldorf-Astoria on December 1.

These recommendations were to the effect that on or before April 1, 1911, brokerages of 10, 15 and 20 per cent be established in what is now known as the excepted territory, and that when the brokerages are so fixed—or by April 1, 1911, at latest—the agency commissions paid by Union companies in such territory be limited to not exceeding 10 per cent overriding and 5 per cent contingent on the net profits, and that Union companies pledge themselves to immediately initiate action on the part of underwriting associations exercising jurisdiction in such territories providing for the prompt adoption of rules limiting brokerages to 10, 15 and 20 per cent in their respective districts, such limitation to be under a classification to be determined hereafter.

In ordinary or non-excepted territory it will be permissible, providing the pledges of the Union companies are carried out, to pay after January 1 next graded commissions of 15, 20 and 25 per cent on classes to be hereafter determined in Maine, New Hampshire, Vermont, Rhode Island, Connecticut and non-excepted portions of Massachusetts, New York,

New Jersey and Pennsylvania. In order to obtain such graded commissions agents desiring them will be required to enter into an approved form of contract against accepting from any company or companies any commission or allowances differing from or exceeding such graded commissions. Economy is thus provided for in the excepted territory where it is needed, while commissions are slightly increased in the non-excepted territory.

The plan will be elaborated on as to further details by the Committee of Seven. By obtaining membership in the Union of companies now operating outside, it is hoped that further good will be accomplished in restricting the evil of unlimited commissions.

The Southern managers will later make recommendations as to the field which is under the charge of the Southeastern Underwriters' Association.

C. S. COWLES DEAD.

C. S. Cowles, the former State agent for Minnesota and the Dakotas of the Royal, died last week of dropsy at Merriam Park, Minn. Mr. Cowles had been with the Royal twenty-seven years and retired on a pension last March.

No head of a family need look beyond the advertising columns of THE CHRONICLE for LIFE INSURANCE.

Examination of the Continental

EXAMINATION of the Continental Insurance Company, made by Isaac Fald of the State Department, to verify that company's increase of capital from \$1,000,000 to \$2,000,000 by a stock dividend made last March shows on the figures contained in the report that the company had even a larger net surplus than it claimed. The statement of liabilities and ledger and non-ledger assets is as follows:

LEDGER ASSETS.

Book value of real estate...	\$1,200,000.00
Mortgage loan	2,700.00
Book value of bonds and stocks	11,878,004.00
Cash in office.....	5,839.19
Cash in bank and trust companies	8,587,179.49
Agents' balances, representing business written within three months	892,254.21
Agents' balances, representing business written prior to three months.....	27,116.65
Bills receivable taken for premiums	201,042.19

Total\$22,794,135.73

NON-LEDGER ASSETS.

Interest accrued on bonds...	\$25,576.65
Interest accrued on bank deposits	1,729.67
Rent accrued	1,732.50
Due for reinsurance on paid losses	11,510.80
Market value of real estate over book value.....	381,250.00
Market value of bonds and stocks over book value....	978,306.50

Gross assets\$24,194,241.85

DEDUCT ASSETS NOT ADMITTED.

Agents' balances, representing business written prior to three months.....	\$27,116.65
--	-------------

Total admitted assets.....\$24,167,125.20

LIABILITIES.

Unpaid fire losses.....	\$394,383.36
Unearned premiums:	
On one year risks	\$1,925,833.70
On term risks..	5,871,145.51

Total liabilities\$24,167,125.20

The Continental was organized in January, 1853, with a capital stock of \$500,000 and its charter was for thirty years. In 1883 the charter was extended for a like period. In 1872 the capital was increased to \$1,000,000 by the issue of 5,000 additional shares of a par value of \$100 each. In December, 1872, an assessment of 40 per cent was levied to make good an impairment of \$400,000 pursuant to a requi-

sition made by the Superintendent of Insurance of New York. In 1874 a special reserve and guaranty surplus fund was created to comply with a law passed that year. At the date of the examination there were three vacancies in the Board of Directors, which should under the charter have twenty-one members.

The annual dividends paid to stockholders varied from 10 per cent in 1853 to 55 per cent in 1909. In January, 1910, a semi-annual cash dividend of 35 per cent was declared, and in March the stock dividend of 100 per cent.

The report notes that in March of this year the company entered into a contract with the Fidelity-Phenix to issue joint policies under the title of Fidelity Underwriters. The company transacts business in practically every State in the Union and has a net premium income of over \$6,600,000 and an agency force of about 9,000 submitting daily reports to the home office. In addition it has about 2,500 agents writing farm business only, reporting to the office of the Western department in Chicago and under the supervision of C. R. Tuttle, a secretary.

Of the financial statement, it is noted that the item, "Bills Receivable Taken for Premiums," represents all notes taken for premiums on farm business not past due and on which an unearned premium liability was charged.

The report gives details of a settlement with F. C. Moore, the former President of the company for his contingent commissions. Mr. Moore received, in addition to his salary, a contingent of 5 per cent on the profits of the business. Upon his retirement in 1903 the amount due him was \$95,000 and the Board of Directors, in order not to swell the expense account unduly that year, resolved to pay him in instalments of \$1,000 a month for eight years. In 1905 the Directors resolved that in case Mr. Moore should be living at the end of the term, the monthly payments of \$1,000 should be continued during his life.

The examiners note the fact that while the company carried a contingent reserve in its annual statement, every year since the passage of the resolution, no mention was made of the liability for the sums payable to its former President under the contract covering his contingent commissions.

"Companies have been permitted to enter in their liabilities," says the report, "a contingent reserve for the purpose of covering unknown liabilities, but such reserve is not intended to cover any certain liability of which the company has knowledge." Consequently the company should have

carried as a separate liability the computed value of the monthly payments in question. At the date of the examination there were still seven monthly payments to be made and the present value of the aggregate amount, discounted at 3½ per cent, amounts to \$6,920, carried in the financial statement as a liability. It is noted also that no liability has been entered into for the payments of \$1,000 monthly after the expiration of the eight years if Mr. Moore is alive. The resolution was voluntary on the part of the directors, in the form of a pension, in consideration of former services and can be discontinued at any time.

With reference to the Fire Companies Building Corporation stock owned by the Continental, the report says:

"Among the securities owned as listed in the afore mentioned schedule 'A' attached hereto appear 2,640 shares stock of the Fire Companies' Building Corporation. This corporation was organized with a capital of \$1,500,000. On the date of this examination the total amount of stock subscribed and paid for was 5,280 shares, representing the sum of \$528,000, of which this company subscribed and paid for 2,640 shares and the Fidelity-Phenix Fire Insurance Company of New York 2,640 shares, these two companies being the only stockholders of the above-named corporation. The proceeds of the sale of such stock were used in purchasing two parcels of real estate at a total cost price of \$525,812.50.

"Subsequent to date of this examination the Fire Companies' Building Corporation purchased in the open market another parcel of real estate for \$207,500 and paid for same with the proceeds of 2,076 shares of stock sold in equal amounts to the above mentioned fire insurance companies. The Fire Companies' Building Corporation is a corporation whose business in so far as now appears consists in carrying on the business of real estate in its various branches. Its sole stockholders are the two corporations above mentioned. As provided in Section 16 of the Insurance law an insurance corporation may invest its surplus funds in the stocks, bonds or other evidences of indebtedness in any solvent institution incorporated under the laws of the United States or any State thereof, and such investment is, therefore, technically in compliance with such statutes."

It is to be observed, however, that Section 20 of the Insurance law has a particular bearing upon the purchase in question.

The salaries paid to officers are as follows:

Henry Evans, President, \$36,000, with 5 per cent contingent; George E. Kline, Vice-President, \$36,000; J. E.

Lopez, Second Vice-President and Secretary, \$7,500, with 1 per cent contingent; C. B. Tuttle, Secretary, \$6,000, with 1 per cent contingent; J. A. Swinnerton, Secretary, \$6,000; Hugh Rankin, Secretary, \$4,200; E.

W. T. Gray, Auditor, \$7,500.

The salary of Vice-President Kline was \$18,000, plus 2½ per cent contingent prior to March 1. The amounts of contingent paid for twelve months up to December 31, 1910, to various

officers were as follows:

Henry Evans, \$55,761.06; George E. Kline, \$10,258.41; J. E. Lopez, \$447.03; C. R. Tuttle, \$4,103.36.

The report also states the book and market value of the securities.

Workmen's Compensation in Ohio

TESTIMONY and argument before the Ohio commission which is studying the subject of employers' liability favored the German system of compensation to sick and disabled workmen and their families in case of death, in all cases except those due to the negligence or misconduct of the employer himself from an accident fund to which the workmen contribute 40 per cent, employers 45 per cent, the state 5½ per cent, with the remaining 9½ per cent made up from interest on a reserve fund.

Resolutions of the National Association of Manufacturers in favor of the German system with modifications have been followed by the Builders' and Traders' Exchange of Columbus and other Ohio exchanges.

At one of the sessions of the Ohio

commission James Connors, of Chicago, an officer of the International Order of Railroad Switchmen, advocated the enforcement of the jail penalty for employers who neglect the equipment of their machinery with safety devices. Fred C. Schwedtman, of St. Louis, and James A. Emery, of New York, who were sent to Europe by the National Association of Manufacturers to investigate European liability laws, championed the German system before the Ohio commission as against the English method of putting the entire burden on the employer favored at the Chicago conference of commissioners. Mr. Schwedtman favored the principle underlying the "relief departments" maintained by various railroads of the United States, though not outspoken in favor of compulsory relief contributions by employees unless enforced in all industries.

It developed before the Ohio commission that neither the Ohio Bureau

of Labor Statistics nor the State Department of Workshops and Factories could furnish information in aid of the inquiry, as they had no record of casualties other than volunteer reports from factories and a newspaper clipping service.

An attorney for the New York Central Railroad presented doubts as to the constitutionality either of compulsory compensation for injuries or compulsory contribution to an indemnity fund, and when asked for suggestions that would tend to avoid attack on constitutional grounds replied that no man to-day could do so in advance of a basis to work on. A representative of the Toledo Iron and Tool Company argued, on the other hand, that if a man can be compelled to contribute to the education of his children without violating his constitutional rights he can be made to contribute to a fund to indemnify him from the consequences of casualties in his vocation.

British Pension Schemes

PRESENT day pension schemes in Great Britain are the subject of the following comment in the "Financial News" of London:

The new scheme of superannuation allowance to civil servants is not without interest to insurance companies generally, as one of the benefits now granted takes the form of a cash payment of a year's salary to the representatives of those officials who die while still in the service. This is, of course, life assurance, though only of a temporary nature. It is an increasing term assurance extending in some instances, to forty years or more. Combined with this there is, under the new scheme a cash payment of not more than a year and a half's salary to be made to each official on his retirement. These two new benefits together form an endowment assurance of increasing amount, and, as such, constitute an important modification of the original Civil Service pension scheme.

The original method made provision for pensions only, and, however sound in theory, was open to certain practical objections. Under it no provision was made for a man's family in the event of his death either before or shortly after retirement—a problem which appears to be happily solved by the new act. The cost of the additional benefits is met by a reduction in the pensions, a scale of

half of the salary at retirement being substituted for the familiar two-thirds formerly allowed in all cases where the length of service was not less than forty years.

The effect of the new regulation is fairly obvious as regards life insurance. Henceforth civil servants will have less need to effect policies on their lives, and probably they will be content with assurances of smaller amount than hitherto. If we place the average amount of assurance at three times the individual salary, we see that policies to the amount of twice his salary will henceforth be sufficient for a Government official, and that, consequently, the amount of life business obtainable from this class may be expected to show a shrinkage of one-third. This, however, will affect one office only—the North British and Mercantile—which, by its rebate of 15 per cent off all premiums, has for many years past secured practically the whole of the life business of the civil service.

No institution employing men in positions of financial trust need look beyond the advertising columns of THE CHRONICLE for FIDELITY INSURANCE.

In New England

BOSTON, December 1.—To the old Boston firm of Field & Cowles, which so long has been identified with the New England management of the Royal, for fire insurance, authority has been given to represent in this section the marine department of that company as well. It is also expected that the affairs of the Royal Indemnity in New England will be put in charge of this firm. Furthermore, the General Fire of Paris, which was admitted to Massachusetts last Friday, has conferred its agency of the Boston and metropolitan district upon Field & Cowles. The General Fire will do a direct business in Massachusetts, and it is probably the first French company to do so since John C. Paige & Co. represented La Metropole and Reassurances Generales in days of yore.

Massachusetts Accident Company.

The Massachusetts Accident Company begins the celebration of its twenty-seventh anniversary to-day at the Hotel Bellevue, Boston. This afternoon there will be an agents' meeting with discussions of pertinent topics and the reading of papers germane to the business. President C. Leonard McNeill will deliver the address of welcome, all to be followed by dinner and a theatre party in the evening. To-morrow morning "anniversary applications" will be presented at the President's desk, followed by an afternoon session. For the evening a dinner and general good time beginning at seven o'clock sharp, is scheduled.

Aetna Manager Appointed.

Harry L. Hiscock has been appointed manager of the Aetna Insurance Company for Boston and vicinity. Mr. Hiscock has been in the employ of the Aetna since 1891, when he was appointed special agent of the company for the western New England field with headquarters at Hartford. When Mr. Adams, who had been in charge of the eastern field as special agent, was called to Hartford as assistant secretary in April, 1897, Mr. Hiscock was transferred to the Eastern division. He has always held a high rank among the field men of New England and has been active in the work of the exchange, where his co-operation and counsel are highly prized. He is a specialist on the Summer hotel hazards, but well acquainted also with fire underwriting conditions in general in this section. The new office conferred upon him is a fitting reward of long and faithful service.

Through a misprint in last week's issue the age of Mr. Hiscock's deceased predecessor, A. C. Adams, was given as "thirty-three," whereas sixty-

three should have been the age given.

Railroad Liable for Damages.

In an opinion handed down last week by the Massachusetts Supreme Court the exceptions of the defendant in the suit of John W. Dixon, of Fall River, against the New York, New Haven and Hartford Railroad were overruled and the plaintiff may recover damages. Dixon, who was employed as a teamster, was at the Fall River Railroad station loading goods on his wagon. An incoming freight train frightened the horses attached to a second wagon, causing them to run away. Dixon ran to the rescue of the second driver and in doing so was struck by the train and injured.

Committee Appointees.

A bulletin from the Secretary's office in Boston of the National Association of Local Fire Insurance Agents announces that Chairman J. H. Southgate, of the Grievance Committee, in accordance with the new rule adopted at the last convention, has selected these four associates: E. J. Tapping, Milwaukee, Wis.; F. W. Offenhauser, Texarkana, Tex.-Ark.; H. H. Hickok, Burlington, Vt.; John R. Weleh, Indianapolis, Ind. Chairman Markham, of the Committee on Legislation, has appointed the following members: A. F. Barbour, Yazoo City, Miss.; Horace M. Smith, Terre Haute, Ind.; W. F. Train, Savannah, Ga.; F. E. Alfred, Newport, Vt.; E. W. Beardsley, Hartford, Conn.; O. H. Millican, Austin, Texas; Knowles Hyer, Pensacola, Fla.; F. H. Wagner, Minneapolis, Minn.; B. F. Kauffman, Des Moines, Ia. President Heale has appointed the following to have charge of the programme for the annual convention in 1911: George D. Markham, St. Louis, Mo., Chairman; E. J. Tapping, Milwaukee, Wis.; Ed-

ward C. Roth, Buffalo, N. Y.

In regard to the proposed federation of the New England Association the "American Agency Bulletin" says: "It is not proposed to interfere in any way with the local efforts of the State organizations, nor with the larger work of the National Association, but to form a medium through which matters may be considered which concern the interests of all New England agents and bring about a degree of co-operation now lacking at times when it is most needed.

New England Brevities.

Fire Commissioner Daly, of Boston, favors the establishment of a fire prevention bureau under control of the Fire Department, and concentrating in that manner the fire preventive powers now distributed in various branches of the municipal service. This would undoubtedly improve the celerity, and thereby the efficiency, of such service.

* * *

The New Hampshire Association of Local Fire Insurance Agents is to hold its annual meeting at the Derryfield Club in Manchester on Wednesday next.

* * *

The John Hancock has appointed John R. Baird, of St. Louis, its general agent for Missouri, succeeding the late John J. Raleigh.

* * *

The Maine Fidelity Company has voted to increase its capital stock, now \$100,000, by the issue of \$900,000 additional, making a round million.

* * *

The Connecticut Mutual Life has opened a general agency at Atlanta, Ga., in charge of Oscar Palmer and H. G. Wells.

* * *

John R. Moody, heretofore identified with the Germania Life of New York, has accepted the position of Actuary with the Puritan Life of Providence. EMIL SCHWAB.

MILL MUTUALS HEARD.

The Legislative Committee, which is inquiring into the allegations of graft at Albany in connection with legislation devoted a great part of yesterday's sitting to hearing testimony given by officers of "mill mutual" fire insurance companies.

If conditions were not made to onerous, it was testified, the "mutuals" would be glad to begin doing business in New York, pursuing their established policy of charging minimum rates and employing no lobbyists or lawyers.

Roland W. Toppan, President of the Arkwright Mutual Fire Insurance Company and other similar organizations, engaged especially in the insuring of mills in New England, testified that a great reduction in rates by the stock companies had resulted from the competition of the mutual companies.

TAFT ON COMPENSATION.

President Taft, in his annual message to Congress on Tuesday made the following recommendation in regard to the need for a new system of employers' liability and workmen's compensation for industrial accidents in the United States:

"In view of the keen, widespread interest now felt in the United States in a system of compensation for industrial accidents to supplant our present thoroughly unsatisfactory system of employers' liability (a subject the importance of which Congress has already recognized by the appointment of a commission), I recommend that the International Congress on Industrial Insurance be invited to hold its meeting in 1913 in Washington and that an appropriation of \$10,000 be made to cover the necessary expenses of organizing and carrying on the meeting."

Insurance Exchange Methods Explained

AT LAST Thursday's session of the New York Legislative Investigating Committee, the methods of the New York Insurance Exchange were explained at length and made a part of the record of the proceedings of the committee, upon which it intends to recommend legislation.

Albert W. Whitney, professor of insurance in the University of California and Actuary to the committee, presented statistics that he has compiled which tend to show the inequity of the coinsurance clause. His tables were based on fires in 10,000 frame mercantile buildings which he has investigated. The average amount of insurance was \$100. In 80 per cent the loss was less than 10 per cent; in only 5 per cent was it between 10 and 20 per cent. In less than 2 per cent of the buildings was the loss between 90 and 100 per cent, and in those it was practically 100 per cent. Professor Whitney's conclusion was that, although the co-insurance clause was equitable and just as between insurer and assured, it was not equitable and just that the loss payments should be fixed at an arbitrary 80 per cent, but that they should be graduated according to the amount of insurance. He pointed out that the coinsurance clause was a dangerous thing for those of the insured who did not understand it or who were not careful to keep their property insured up to 80 per cent as the value of the property rose.

Willis O. Robb, chairman of the New York Fire Insurance Exchange, was the next witness.

"What is the New York Fire Insurance Exchange, what does it do, and how does it do it?" asked Bruce.

In a preliminary statement Mr. Robb said:

"The New York Fire Insurance Exchange is a voluntary and unincorporated association formed pursuant to a permissive article in the by-laws of the New York Board of Fire Underwriters, allowing of the organization of tariff or rating associations by members of the board. It was organized in March, 1899, and comprises in its membership officers of local fire insurance companies and managers and head agents of out-of-town companies. Substantially every fire insurance company admitted to do business in the State and operating in New York City is represented in one or more of these ways in the exchange membership. There are about fifty-five 'company members'—i. e., companies represented by officers or general managers—and almost the same number of 'agency members'—i. e., head agents representing one or more companies in New York City.

"The exchange has two general spheres of activity—expenses and

rates. It exercises control over the compensation to be paid to brokers and certain classes of agents, and it fixes either specific or minimum rates for the writing of risks, separately or by classes. Strictly speaking, it does not do anything else. The exchange is as far as possible from exercising any control or influence over the division of premium income among its members or over the sharp and unceasing competition for business through their several and widely varying underwriting policies, methods of cultivation, preferences as to lines and classes. And it has no provision or machinery whatever for keeping in touch with or exercising any influence upon legislation, either municipal or State."

It was learned that the results of the ratemaking work of the exchange are embodied in printed rate cards, which are distributed in daily instalments to exchange members and filed in their rate cabinets for constant use. The expense of the exchange in printing and distributing cards alone is nearly \$60,000 a year. The membership of the exchange consists of about fifty-five companies, represented by officers or general managers, and a similar number of agency members, representing one or more companies in New York City.

The exchange rates are based on a stipulated ratio of insurance to value, says the statement submitted by Mr. Robb, and presuppose the attachment to every policy of either the 80 or the 100 per cent average co-insurance clause. The assertion is made that the exchange has done as much or more than any other agency, "both to improve the quality of so-called fireproof construction by charging for defects and to encourage by its very low fireproof building rates the multiplication of standard fireproof structures and the breaking up of great areas of conflagration breeders."

These conditions considered, it was argued that 'the exchange is doing, with intelligence, equity and an effectiveness that only its control over rates renders possible a work for the public good that no other public or quasi-public body can do in its stead.'

An effort was made by M. Linn Bruce, counsel for the committee, to draw from Mr. Robb the admission that the exchange exercises a monopoly of the fire insurance business. But the nearest Mr. Robb came to admitting that was to say:

"Practically all the business is done by members of our organization."

Mr. Robb said that when a fire insurance man became a member of the exchange he signed an agreement, but just how this agreement bound him was not made plain. He told Mr.

Bruce that there were no stock companies in the metropolitan district which are not members of the exchange.

The exchange was supported, partly by fees charged to fire insurance brokers entitling them to do business in the metropolitan district. Mr. Robb told the committee that he would be very glad to have them visit the exchange. The invitation was accepted.

Mr. Robb said in reply to questions that the National Board of Fire Underwriters has no control over tariffs and that the New York Fire Insurance Exchange is not subordinate to the New York Board of Fire Underwriters. There are rates as low as 5 cents and as high as 5 per cent on property in the metropolitan district, and some insurance men are inclined to believe that the highest rate prevailing now is not bearing its proper share of the fire losses and that the lowest rate is bearing more than its share. But Mr. Robb did not agree with such a view. He said that many attempts had been made to have the insurance companies adopt a uniform scale of classification.

"What effect does the competition of factory mutuals have upon your companies?" asked Mr. Bruce.

"It is not material in the congested districts of New York," said Mr. Robb.

Mr. Bruce wanted to know what has been done to cut down the number of small fire insurance brokers who have certificates from the exchange. Mr. Robb said that efforts had been made, but they did not seem feasible, "so long as political influence existed." Senator Wagner, of the committee, asked him what he meant.

"Most of the complaints against the exchange have come from brokers who have lost their certificates or have failed to obtain them," said Mr. Robb. He added that frequently the men making such complaints would get their district leaders or other pol-

iticians to "make a loud and enduring noise" to get the exchange to issue the desired certificate.

"Does the 'loud and enduring noise' lead the exchange to issue the certificate?" asked Mr. Bruce.

"Not as a rule," he replied, "but the loud and enduring noises have their effect in the insurance business, as in almost every other sort of business."

Further knowledge of the actual operation of the 80 per cent co-insurance clause was extracted by the committee from this explanation contained in a pamphlet issued by the Hartford Fire Insurance Company:

"When the 80 per cent or reduced rate average clause is attached to a policy it means that the assured agrees to carry insurance equal to at least 80 per cent of the value of the

property involved. Failing so to do, he can recover only such proportion of any loss amounting to less than 80 per cent of the value of the property insured, as the amount of insurance he actually carried bears to 80 per cent of the value.

"Thus, if the value is \$10,000 and he carries \$5,000, he can recover but five-eighths of any loss that amounts to less than \$8,000—that is to say, of any loss which amounts to less than 80 per cent of \$10,000.

"On the other hand, however, when the assured carries insurance equal to 80 per cent of the value of the property insured the 80 per cent co-insurance or reduced rates average clause is of no effect, and the assured will recover the entire amount of his loss, be it large or small.

Rate Bill in Missouri

A NEW fire insurance rating bill drawn by Judge John Kenniser, former State Superintendent of Insurance for Missouri, has the support of the Missouri Association of Local Fire Insurance Agents. President Capen, of the association, claims that Governor Hadley vetoed the bill passed by the last Legislature at the request of the insurance companies, although the agents favored it because it allowed them to form rate administering associations, tended to cheaper rates because of publicity of schedules and was a benefit to property owners. The new measure provides for a State Insurance Commission of three members to be appointed by the Governor, with power to approve or to recommend changes in rates and general schedules, which must be submitted to the commission by fire companies doing business in Missouri. The bill also aims at the rebating evil with a provision penalizing departure by agents from rates filed with the Fire Insurance Commission.

Mr. Capen contends that similar measures providing for State regulation of fire insurance rates have proved beneficial in Kansas and Texas. An act passed in Louisiana is not yet in operation. Attorneys and underwriters believe, however, that any attempt at arbitrary regulation

of premium rates by the Legislature would come within the recent decision in the case of the American Surety Company against the State of Nebraska, regarding the power of a State Legislature to dictate rates.

In this case the right of a State board to make rates was disputed by the American Surety Company and Judge Thomas C. Munger, in the United States Circuit Court of Nebraska, held as follows:

"If the State may fix the amount of compensation for which an insurer may lawfully contract for furnishing such insurance, the State may dictate the price for which all other commodities shall be sold, including the price which may be paid for labor. This cannot be done. The Fourteenth Amendment to the Constitution protects the right of those engaged in purely private business to fix the price at which they will sell their service or commodities.

"It cannot be presumed that a Legislature intends any interference with a purely private business. It cannot ordinarily prescribe what an individual or corporation engaged in a purely private business shall charge for services."

It is argued from this decision that the surety or fidelity business is no more a purely private business than that of fire underwriting or plate glass or burglary insurance.

British Plans of Assurance

W A. BAIN, A. I. A., of the Manufacturers' Life Insurance Company, read a paper on "Plans of Assurance and Policy Writing" before the recent meeting of the Insurance Institute of Toronto, in the course of which he said:

Naturally the first question is,

What is a plan of assurance? Any plan of assurance is a contract under which one party called the insurer, usually the insurance company, agrees in consideration of a sum of money called the premium, to pay a larger sum of money to another party called the insured, on the happening of a designated contingency. In life insurance the contingencies provided

for are just two in number. First, the death of the insured within a certain specified period, and, second, the survival of the insured of a certain specified period.

A person desirous of insurance would, in the Canadian and American companies doing business in America to-day, have choice of some 200 or 300 so-called different plans of insurance. These are all simply modifications and combinations of the two contingencies above mentioned. From this the layman might infer that from an actuarial standpoint life insurance is very simple, but some of the combinations are very ingenious and quite complicated, as several benefits are provided for under the same policy.

To give an explanation of the particulars underlying the most common of our modern plans I would first ask your attention to two fundamental plans—namely, term insurance and pure endowment. First, then, term insurance. Under this plan the insurance is payable only if death occurs during a limited period of time. Taking the shortest term one year, we should arrive at the premium for a person aged, say twenty, as follows:

Entering the H^m mortality table, we find that between ages 20 and 21, out of 100,000 people living at age 10, there are 96,223 people living at age 20, and 95,614 at age 21; 609 die during the year, and if each of these 96,223, age 20, insured their lives for \$1 we should have to pay 609 claims, or \$609 during the year, and, leaving out all consideration of interest, each would have to contribute 609-96223 dollars. Now, if a company is able to make, say, 3½ per cent on this money and the sums assured are not paid until the end of the year the correct premium would be the present worth of 609-96223 dollars at 3½ per cent. This would give us \$.00611 as the net premium, to which a loading must be added for expenses, and we have the office premium for a one-year term policy for a person aged 20.

To get the premium for a two-year term the same reasoning holds good. Six hundred and forty-three of the 95,614 at age 21 die before reaching age 22, and, discounting 643-95614 for two years, and adding it to the single premium for our one-year term, we have the net premium for a two-year term insurance. Continuing this process, we get the net single premium for term insurance for any number of years. From the single premium the annual premium can at once be obtained by dividing by the correct temporary annuity due.

Second, endowments: By this I mean pure endowments, not endowments insurance—that is, a person aged 20 takes an endowment for, say, 20 years, for \$1. If he should die within the 20 years his heirs would get nothing, but would receive the \$1 only upon consideration of having arrived at age 40. To determine the single premium in this case of the 96,223 people living at age 20, 82,284 are alive at age 40, and an office insuring these 96,223 at age 20 would have to pay 82,284 claims in 20 years, and would have to charge each the present worth of 82284 divided by 96223 as a single premium for a pure endowment.

Having now explained these two fundamental plans, I will attempt to

show that other plans are merely a compilation of these in some form. First, take an endowment assurance rate: For example, a 20-year endowment for \$1,000. This consists of the 20-year term rate, which would return the insured his \$1,000 should death occur within the 20 years, together with the rate for a pure endowment for \$1,000, which will provide for the repayment of \$1,000 to the insured should he survive the 20 years. Second, Whole Life Policy: According to the H^m mortality table the insured will not reach a higher age than 98 years. The rates are calculated that he will die by that time. Should he survive this age the company would theoretically have no right to charge him any further premiums, as his policy should be, according to the table upon which his rates are calculated, paid to his heirs by that time. Hence, the Whole Life Policy consists of a term rate for 98 years, less the age of the insured, say 20, giving a term rate for 78 years plus a pure endowment payable at the age of 98.

Third, Limited Payment Life. Here the benefit is that of a Whole Life Policy, the premium being spread over a limited number of years, instead of the whole duration of life.

On some forms of the plans already touched upon—namely, Life, Limited Payment Life, Term or Endowment Assurance—probably 75 per cent of all life insurance is written. However, besides these, an applicant may secure protection in a great number of other ways. Whether a large variety of insurance plans is helpful in securing business or harmful, is a debatable question, but a wide choice should stimulate applicants, as there are various objects for which insurance is desired. One principle will, however, govern. The prospect should be impressed with the necessity of taking one on as short a term of payment as the circumstances will permit. Life is uncertain, and for this reason insurance is taken, but financial prosperity is more uncertain, and a larger proportion would meet with reverses than would die during, say, a period of 20 years. Hence from this point of view a Limited Payment Life Policy is preferable to an Ordinary Life with continuous premiums, and the shorter the payment term the greater the certainty of completing it and the larger are the guaranteed provisions of the policy to assist one in a case of emergency. I will only attempt to touch on a few of the most common special plans, usually found in the present-day rate book. In a general way all policies will divide themselves into two classes: First, those under which protection or pure insurance predominates. Second, those plans which combine the investment feature with protection. Under the first class I have already cited Life, Limited Payment, Life, and Term plans. To these may be added the Return Premium plan. This feature is added to several of the ordinary forms of policies, and offsets to some extent the objection to the loss of the accumulated profits on policies written under deferred dividend plans, should death occur during the accumulation period.

A person purchasing a return premium policy will receive something more than the bare face of his policy,

as the following analysis will show. For example, a 20-year endowment policy for \$1,000 with the return premium feature would consist of: First—A 20-year term insurance of \$1,000. Second—An increasing term insurance starting at the amount of the premium, and increasing by this amount each year until during the 20th year the term insurance would be \$1,000, plus 20 times the premium. Third—Pure endowment at the end of 20 years for \$1,000, to which must be added the profits payable. Hence it will be seen that whether the insured lives or dies something more than the \$1,000 is payable.

Another form of return premium policy provided to meet the loss of profits at death during the accumulation period and sold under various titles as a Compound Investment Plan, a Guaranteed Investment Plan, etc., is largely sold at the present time. Here all premiums paid usually after the 10th and before the completion of the accumulation period are returned along with the sum insured, should death occur during that period. The extra premium for this additional benefit is small at most ages and the plan has proved very popular. It has often occurred to me that probably this class of policies now so largely purchased by the insuring public will in the long run prove unsatisfactory. Insurance companies are well aware that it is hard enough for them to make settlements at the end of the accumulation period with which the insured is entirely satisfied.

The profits earned are usually somewhat below his expectation. Now the extra benefit under this class of insurance is an increasing term benefit. At the end of the term—that is, on the completion of the accumulation period—it has expired and has no value. The insured is prone to compare the amount of premiums paid with the cash returns offered in settlement. Hence it is going to be just that much more difficult for a company to satisfy a policyholder under one of these policies than under the straight plan without the additional return premium benefit.

Occasionally a person is thought to be of such value to a firm that an insurance is placed on his life payable to the firm, or, again, a joint policy is is-

Insurance News in the West

CHICAGO, Dec. 7.—It is understood that the Western Insurance Bureau companies have found it necessary to consider some sort of a separation movement. While the word "separation" has not been used by the bureau and at an earlier stage some of its officers were particular to say that that question had not been considered, the companies are now said to be beginning to feel the need of some measure to protect their classifications. They find themselves in much the same position as union companies used to be when they had a flat commission and the non-union companies in the agencies, which paid graded commissions, got the cream of the business. So the excess commission companies in agencies with bureau companies now are beginning to get preferred business which the bureau companies had before they adopted their present commission scale.

It already has been strongly intimated from a prominent bureau manager that the companies in that organization would find ways of dealing with companies that would not do business along approved lines—in other words, with excess commission companies in bureau agencies. While he did not specify what course was pursued, he left the impression that in flagrant cases the bureau companies were likely to give the agent the choice of representing them or the excess commission companies, but not both. It goes without saying that no strong, important class of companies will allow choice business to be pirated from the books of those companies without at least putting up strong measures to prevent it.

The old question of fire insurance titles, which has been discussed from time to time in the West, is up again because of the action of the Jefferson Fire in giving Edward Bliven the title of "Western Manager." Mr. Bliven until recently was special agent for several Western States. When Montgomery & Funkhouser resigned their general agency the States they had handled were turned over to Mr. Bliven's supervision and an assistant was given to him. It was then the company changed his title.

In other days the title "general agent" was used only by one in charge of a department, to which agents in the territory in which the underwriting was done reported their business. Then some companies which had a special agent in charge of several States, who had one or more assistants, gave the supervising field man the title of general agent in order to distinguish him from his assistants. This was confusing, as many agents supposed he managed a department, but so many companies

followed this course that the title "general agent" came to have no fixed meaning. Although many general agents in charge of large departments continued to hold their old titles, there has been a tendency among insurance men to call them "managers," to distinguish them from the so-called "saddle general agents," who do not have departments. Now that the title of manager has been given to a supervising field man, there apparently is no way left of distinguishing by title alone those who manage departments from those who do not.

Announcement last week of the appointment of Charles R. Street to succeed J. H. Lenahan in the management of the Western department of the Fidelity-Phenix caused considerable interest in the West, although there was no expectation that anybody else would be appointed. It was noticeable that Mr. Street was not made general agent, as Mr. Lenahan had been, but secretary of the company, thus following the Continental's system of having an executive officer in charge of the Western department. That the department will continue to make fine progress nobody doubts. Mr. Street has so thorough a knowledge of every detail of the company's Western business that nothing but a successful administration can reasonably be expected.

The Life Underwriters' Association of Chicago last week elected eighteen new members at one meeting and had the most profitable programme it has enjoyed in years. The news that Pittsburg recently took in thirty new members seems to worry Chicago somewhat; not that it would have Pittsburg do less, but that it would do more. The January meeting will be "ladies' night" in the Chicago association. Shop talk will be barred, but the members hope to make a gallant show before the ladies by adding at least thirty new members to the list.

This coming winter will probably see the enactment of numerous workmen's compensation laws in the West. Recently Commissioners from the various states conferred in Chicago and decided that if possible the laws on this subject should be uniform, but the signs do not point strongly to uniformity. The Wisconsin commission has drafted one tentative bill after another and held hearings upon each, endeavoring to get all views. In Washington, on the other hand, if newspaper reports be correct, the whole bill except the details, was agreed upon offhand. It provides for a state system, with no provision for the use of insurance corporations. In Ohio there appears to be a con-

siderable sentiment in favor of the principle of the German system, with the employer, the employes and the state all contributing to a fund from which to compensate injured workmen.

Latest reports from Iowa are to the effect that sentiment among members of the legislature elect favors the separation of the banking department from the office of the Auditor of State rather than the creation of a separate insurance department. Under the present law the Auditor performs the duties usual to that office and has supervision of banks and insurance also. Two years ago an effort was made to take both the banking and the insurance departments out of the Auditor's office and make them separate departments. This was understood to be a movement unfriendly to the present Auditor and it came to naught. In Iowa, however, with a Legislature composed of some Democrats and two varieties of Republicans, at war with each other, it is hard to tell what the law makers will do.

Reports published last week to the effect that ex-Commissioner Barry of Michigan already had "yumped his job" as head of the casualty publicity bureau were disquieting. It was a relief later in the week, when it was reported that he had reconsidered his acceptance of the assistant secretaryship of the Metropolitan Life. With the legislative sessions only a month away and with the probability of no end of bills affecting various branches of the casualty business, the companies would have been in a plight if Mr. Barry had failed them.

Several of the Chicago burglary insurance managers are giving some serious thought to the question of "mysterious disappearance" claims. These are a serious factor in running

up the loss ratios of some offices and one manager has expressed his intention of holding off on the payment of such claims, even though it does cause protests to be made by the brokers. Another manager says that within the last few weeks he has received a large number of claims for stolen wearing

apparel. In many cases people looked for their winter wraps or furs, and, being unable to find them, made claims on the burglary company. In several of these cases the assured reported later that they had found the missing property.

LA SALLE.

Travelers in Canada

IN ITS issue of December 1 the "Hartford Courant" publishes the following editorial in regard to the Travelers in Canada:

The Travelers Insurance Company has been doing business in Canada ever since 1865. It has more than \$3,000,000 invested there. Its Canadian life risks total more than \$11,000,000 and its accident risks about \$76,000,000. "The Travelers" is a name to conjure with in the intelligent portions of the Dominion.

That's why certain persons procured (year before last) the passage by the Dominion Parliament of a special act incorporating them as the "Travelers Life Assurance Company of Canada," and have begun to solicit business under that name. Our Hartford company applied to the Superior Court at Montreal for an interlocutory order restraining those piratical persons from making any use of the name until the question of their right to use it should be judicially determined. The application being denied, an appeal was taken to the Court of King's Bench. The "Montreal Gazette" in a recent issue contains the text of the appellate tribunal's decision and of the written and filed opinions.

The decision is that the judge of the court below (his name is Lafontaine) was right in refusing to issue the temporary injunction; the appeal is dismissed with costs. It's Mr. Justice Laverne who delivers the opin-

ion, Mr. Justice Archambault and Mr. Justice Trenholme concurring. They base their decision upon the supremacy of Parliament when acting *infra vires*. "The respondent bears the name which was granted to it by the Parliament of Canada, after opposition on the part of the appellant," says Mr. Justice Laverne. "The courts cannot interfere to prevent the use by respondent of the name thus given to it."

The Chief Justice (Sir Louis A. Jette) and Mr. Justice Cross dissent. The former says:

The name was selected so that the new company could benefit by the reputation earned by the old company. The charter was granted by Parliament, after the appellant had contested respondent's right to incorporation under the name it now bears, but by so doing Parliament could not intend and did not intend that the respondent should injure the appellant. That such injury has been suffered, and is liable to continue, is abundantly proved by the evidence of record.

Mr. Justice Cross says:

"There is practically no controversy as to the facts. The question has been reduced into a mere question of statutory construction. The injury is clear. The time to grant relief is now and not after the mischief will have been done. At present the old established company has everything to lose. The infant company has everything to gain and nothing to lose. The inconvenience to be suf-

fered because of the new order of things ought to be borne by the disturbing party. In such circumstances an injunction can be appropriately granted by a court of appeal."

They were outvoted and overruled for the time being, but they had common sense and the self-evident equities on their side. We confidently expect a reversal of this Montreal decision.

HERE AND THERE.

In conjunction with his present duties as Secretary of the Assurance Company of America, Charles S. Conklin has received the appointment of superintendent of the agency department for Edward E. Hall & Co., succeeding C. B. G. Gaillard, who has resigned. Mr. Conklin entered the Hall office on December 1 and made it his headquarters. It is understood that there will be co-operation between this office and that of the Assurance Company of America.

BRITISH ASSURANCE PLANS.

(Continued from Page 9.)

sued covering the lives of all the firm payable upon the death of the first. But since the premiums in most cases approach too closely to the sum total of the premiums for like amounts upon the lives of all the members separately, this plan has never become very popular. Then there is the feeling that if insurance is a good thing it should not cease upon the lives of the surviving members of the firm, because the life of one member has failed. A more popular and better way is for each member to take separate insurance in favor of the firm, the premium to be paid out of the firm's profits.

In all the foregoing plans, a person taking insurance stipulates to pay a level premium from the beginning until the maturity of his policy. There is still another class of insurance where the premiums increase year by year. It is merely term insurance with the option to continue it from year to year without medical examination at the correct one-year term rate for his then attained age. Under this plan he pays year by year the exact premium to carry his risk for his attained age. Frequently the renewable term plan is applied to insurance at fixed rates for longer periods, 5, 10 or 20 years. In the long run this class of insurance is not satisfactory, one objection being that it is exceedingly difficult to prove to any dissatisfied person who has paid premiums for 10 or 20 years, that he has already obtained value in protection for the premium that he has paid and that no surrender value attaches to the policy. The insured gets the largest amount of protection possible for the premiums paid, but there is no accumulation of personal savings and the premium ultimately becomes unbearably high.

Special contracts involving the combination of some form of insurance with the savings bank principle are frequently met with. Mention will be made of three, namely: Instalment policies, continuous instalment policies and gold bond or debenture bonds.

The instalment feature may be attached to any form of policy and is devised in order to furnish the protection of income for a stipulated number of years after the decease of the insured or the maturity of the policy. Here the sum assured, instead of being payable in one sum, is payable in a fixed number of instalments. The face value of the policy is the present worth of this annuity certain, and, of course, the premium is lower than for a policy of a similar amount, where the insurance is payable in one sum.

The instalment policy has the objection that the payments might cease before the beneficiary ceased to need the protection. To provide against this, the continuous instalment policy has been devised. Here a certain beneficiary may be named during whose lifetime the company will pay a fixed income with the further provision that in the event of this beneficiary dying before the twenty payments have been made, the payments

will continue for the full period of twenty years. Hence, the plan consists of a combination of the survivorship annuity with an annuity certain for twenty years. The same feature may be applied to endowment insurance, the instalments being paid to the assured himself, or to the last survivor of himself and a beneficiary.

Gold bond or debenture bond: This policy, instead of being payable to the beneficiary when the policy becomes a claim, is retained by the company and a fixed per cent of the face of the policy (often 5 per cent) is paid for a certain term of years, at the end of which the principal sum is payable. Any rate of interest may be granted, the premium payable under the assurance contract being adjusted to provide for interest at rate stipulated.

Children's endowments have never been as popular in Canada as in some other countries. Many schemes have been evolved for insurance on the lives of children. In most instances, however, it is difficult for a parent to establish an insurable interest in the life of his child, and for this reason the maximum amount of insurance depending on the age of the child has

been fixed by law. However, several endowment schemes depending on the life of the parent to provide a dowry for a daughter or a cash payment for a son to assist him at the start of his business career might be mentioned.

The benefit of a few are as follows:

First—An endowment payable at some fixed date, often when the child arrives at age 21, the premiums to cease if the death of the parent, who is the person insured, occurs during the endowment period. If the child should die before attaining age 21, the proceeds of the policy would be payable to the insured's estate at the anniversary of the policy during the year the child would have attained his 21st birthday had he lived.

Second—Policy providing similar benefits to those above, with the extra conditions that if the child predeceases the parent all premiums paid will be returned the parent and the contract terminated.

Third—Policy providing similar benefits to (2), the premiums, however, being returned with either simple or compound interest at some fixed rate.

Holiday Hazards

WARNING to policyholders as to extra hazards attendant upon the holiday season has been issued by the Survey Bureau of the New York Board of Fire Underwriters in the form of the following circular:

Your attention is hereby respectfully called to the fact that the introduction about premises of Christmas greens, harvest specimens and other inflammable materials, such as cotton to represent snow, and the like, the use of moving picture machines, introduces an additional hazard not contemplated by the underwriters in issuing policies of indemnity covering the usual fire hazard, and in this connection we refer you to one of the conditions of the standard form of fire insurance policy, wherein it is stipulated that "this entire policy, unless otherwise provided by agreement, indorsed hereon or added hereto, shall be void, etc., etc., if the hazard be increased by any means within the control or knowledge of the insured."

So many disastrous fires have occurred not only in mercantile establishments, but in churches, public buildings, etc., caused by the introduction of such decorations and exhibitions, and the danger to life and property is so great, that the practical prohibition of this class of display is deemed necessary by the New York Board of Fire Underwriters.

The installation of electric wiring for display or advertising purposes often introduces a serious fire hazard, unless the work is carefully done by men who are thoroughly competent and familiar with the necessary safeguards for this class of hazard.

We desire to call your attention to the fact that fire insurance contracts require that all additions, changes or

alterations made in electric equipments be reported to and approved by this board.

MEN OF ENERGY ARE OFFERED WORK OF MOMENT

In desirable localities representing a sixty-year old institution, with modern, liberal, law-conforming policies, and helpful Home office co-operation. Much good territory available. Many opportunities for advantageous positions. Inquire NOW.

Fraternalist Harmony Imminent

FRATERNALISTS have come to an agreement as to the details of a uniform bill to be introduced in the Legislatures of all the States at the coming sessions regarding enlarged supervision of fraternal orders by State insurance departments, periodic valuation of membership certificates and adequacy of rates. At the September, 1909, convention of the Insurance Commissioners, held at Colorado Springs, resolutions were adopted in favor of legislation providing for valuation of all membership certificates promising death benefits on a mortality table not lower than the National Fraternal Congress table, at 4 per cent interest; that new members be admitted on a basis no lower than the National Fraternal Congress table, for terms as well as for whole life certificates; that death benefits be limited to \$3,000; for safeguarding investments; for separation of expense funds, and for total and permanent disability benefits in lieu of death benefits.

A committee of the Commissioners met in the following December in conference with representatives of the Associated Fraternities of America and the National Fraternal Congress, and in April of this year the committee submitted a tentative bill to the representatives of the orders containing thirty-two sections.

At a meeting in June representatives of the Fraternal Congress contended for a minimum rate of contribution applicable to all members and all societies after a fixed date, but minimum rate legislation was opposed by officers of the Associated Fraternities. An agreement on a substitute was reached, however, and as a result the committee of the Insurance Commissioners put out a revised tentative draft. The revision omitted a provision that valuation should not be a test of solvency and failed to define solvency to the satisfaction of the Associated Fraternities representatives.

Further conferences followed between the two organizations, their differences were adjusted and the result of their agreement was embodied in a redraft of Sections 23 and 23A of the draft, which was accepted by the convention of the Insurance Commissioners.

The text of these sections, embodying the settlement of the points at issue between the two camps of fraternalists is as follows:

Section 23. (Annual Reports.) Every society transacting business in this State shall annually on or before the first day of March file with the Superintendent of Insurance, in such form as he may require, a statement under oath of its President and Secretary or corresponding officers, of its condition and standing on the thirty-first day of December next preceding, and of its transactions for the year

ending on that date, and also shall furnish such other information as the Superintendent may deem necessary to a proper exhibit of its business and plan of working. The Superintendent may at other times require any further statement he may deem necessary to be made relating to such society.

In addition to the annual report herein required, each society shall annually report to the Superintendent a valuation of its certificates in force on December 31 last preceding, excluding those issued within the year for which the report is filed, in cases where the contributions for the first year in whole or in part are used for current mortality and expenses, provided the first report of valuation shall be made as of December 31, 1912. Such report of valuation shall show, as contingent liabilities, the present mid-year value of the promised benefits then subject to valuation; and, as contingent assets, the present mid-year value of the future net contributions provided in the constitution and laws as the same are in practice actually collected. At the option of any society, in lieu of the above, the valuation may show the net value of the certificates subject to valuation hereinbefore provided and said net value, when computed in case of monthly contributions, may be the mean of the terminal values for the

end of the preceding and of the current insurance years.

Such valuation shall be certified by a competent accountant or actuary, or, at the request and expense of the society, verified by the actuary of the Department of Insurance of the home State of the society, and shall be filed with the Superintendent within ninety days after the submission of the last preceding annual report. The legal minimum standard of valuation for certificates, except for disability benefits, shall be the National Fraternal Congress Table of Mortality, as adopted by the National Fraternal Congress on August 23, 1899, or, at the option of the society, any higher table, or, at its option, it may use a table based upon the society's own experience of at least twenty years and covering not less than 4 per centum per annum. Each such valuation report shall set forth clearly and fully the mortality and interest basis and the method of valuation. Any society providing for disability benefits shall keep the net contributions for such benefits in a fund separate and apart from all other benefit and expense funds and the valuation of all other business of the society; provided that where a combined contribution table is used by a society for both death and permanent total disability benefits, the valuation shall be according to

tables of reliable experience and in such case a separation of the funds shall not be required.

The valuation herein provided for shall not be considered or regarded as a test of the financial solvency of the society, but each society shall be held to be legally solvent so long as the funds in its possession are equal to or in excess of its matured liabilities.

Beginning with the year 1914 a report of such valuation and an explanation of the facts concerning the condition of the society thereby disclosed shall be printed and mailed to each beneficiary member of the society not later than June 1 of each year, or, in lieu thereof, such report of valuation and showing of the society's condition as thereby disclosed may be published in the society's official paper and the issue containing the same mailed to each beneficiary member of the society. The laws of such society shall provide that if the stated periodical contributions of the members are insufficient to pay all matured death and disability claims in full and to provide for the creation and maintenance of the funds required by its laws additional, increased or extra rates of contribution shall be collected from the members to meet such deficiency; and such laws may provide that upon the written application or consent of the member his certificate may be charged with its proportion of any deficiency disclosed by valuation, with interest not exceeding 5 per centum per annum.

Section 23A. (Provisions to Insure Future Security.) If the valuation of the certificates, as hereinbefore provided, on December 31, 1917, shall show that the present value of future net contributions, together with the admitted assets, is less than 90 per centum of the present value of the promised benefits and accrued liabilities, such society shall be required thereafter to reduce such deficiency not less than 5 per centum of the total deficiency on said December 31, 1917, at each succeeding triennial valuation. If at any succeeding triennial valuation such society does not show such percentage of improvement the Superintendent shall direct that it thereafter

comply with the requirements herein specified. If the next succeeding triennial valuation after the receipt of such notice shall show that the society has not made the percentage of improvement required herein, the Superintendent may, in the absence of good cause shown for such failure, institute proceedings for the dissolution of such society, in accordance with the provision of Section 24 of this act, or, in the case of a foreign society, he may cancel its license to transact business in this State.

Any such society, shown by any triennial valuation, subsequent to December 31, 1917, not to have made the improvement herein required shall,

within a year thereafter, complete such deficient improvement, or thereafter as to all new members admitted be subject, so far as stated rates of contribution are concerned, to the provisions of Sections 12 of this act, applicable in the organization of new societies; provided that the contributions and funds of such new members shall be kept separate and apart from the other funds of the society until the required improvement shall be shown by valuation. If such required improvement is not shown by the succeeding triennial valuation then the said new members may be placed in a separate class and their certificates cancel its license to transact business.

Oregon's Employers' Liability Law

OREGON'S recent law regarding the protection for persons in hazardous employment, defining and extending the liability of employers and providing that contributory negligence shall not be a defence, was indorsed by the Oregon State Federation of Labor, and in the argument advanced in its favor it is stated that "this is a call of the plain people to the plain people for relief." As a result the liability companies doing business in that State have instructed their agents to submit business only upon the rates advised in the 1904 Manual, without the differential. This doubles the rates formerly in use.

"The relief for the plain people in this case will be that they will have to pay the excess charges," says the "Pacific Underwriter." "Under present conditions it is impossible for the liability companies to calculate an adequate premium for which to accept the liability and relieve the employer.

"Oregon has gone further in this law than any other State, inasmuch as it fails to fix a maximum amount of damage and has also removed the fel-

low servant defence. Whether it will stand the test of the courts remains to be seen. The liability now is chargeable solely to the employer in a far greater amount than under the old statutes. He is practically unable to calculate his liability, and this is borne out by the fact that the insurance companies, whose business it is to estimate such liability are entirely at sea. The burden ultimately will not have to be borne by the employer."

Chronicle Paragraphs

ON THE 1st of January important and somewhat radical features will become operative as to the issuance of policies in this State (both fire and liability), by reason of department decisions and newly enacted laws which take effect on that day. Two notable items are those relating to the new typewriter form of policy (without change of standard conditions) and the requirement, under the Superintendent's ruling, that all applications for accident, disability and health insurance must be signed by the applicant. Also, no beneficiary benefits will be permitted on accident policies after the first of next year.

Regarding the first-named innovation, local underwriters do not seem to think that the typewriter form of policy, which has been accepted for optional use only, will be popular in New York City, on account of the varied large or small forms submitted by brokers and the numerous clauses used in accordance with Exchange rules. The size of the new policy will not permit of a broad gauge space for rubber stamp clauses and indorsements. For the agency field, however, it may be of service, enabling the making of three copies at once, including the copying of two daily reports.

The decision of an Ohio Circuit judge that under an Ohio statute passed last year a tax of 2½ per cent is collectible on life insurance premiums mailed in Ohio by the assured to home offices outside the State has been reversed in the Ohio Supreme Court on the appeal of the Mutual Life. The company contended that enforcement of the statute was interference with interstate commerce and taxing its property without due process of law.

John M. Talbot & Co. succeed Talbot, Wallace & Co. as city and suburban managers of the fire insurance departments of the two Philadelphia companies, the Insurance Company of North America and the Alliance Insurance Company. George G. Hooper, who was long associated with the Insurance Company of North America, of Philadelphia, has been taken into the firm.

Surplus lines in the United States of the Gresham Fire and Accident Insurance Society (Ltd.) have been put in the hands of Fred S. James & Co. Only legitimate lines at tariff rates will be handled. The Gresham has a subscribed capital of \$2,500,000, of which \$1,000,000 is paid, and will work in connection with the old Gresham Life Assurance Society. James H. Scott is general manager and Thomas Brand Miller fire manager.

The Gresham directors are: Charles Augustin Hanson (Alderman), Chairman; F. W. Butterworth, Deputy Chairman; C. H. Beadwell, of Shepherds Bank, Sussex; Lawrence Currie, J. P., of Glyn, Mills, Currie & Co., London; Courtenay C. S. Fooks, barrister-at-law, chairman of the South Sussex Waterworks Company; Henry Hoare, banker; Sir Reginald McLeod, K. C. B., late Under Secretary for Scotland; Charles Colin McCrea, J. P., chairman of the Railway Debenture and General Trust Company (Ltd.), and director of the London, Brighton and South Coast Railway; Right Hon. Lord Monk Britton, C. B.

The Hartford Fire Insurance Company has obtained a lease of No. 58 Maiden Lane, just west of William Street, and the owner will raze the structure and put up a new five-story building for the exclusive use of the Hartford.

The American Lloyds Underwriters have been licensed by the Quebec Insurance Department and William A. Ralston, of G. Ross Robertson & Sons, Montreal, has been appointed as the underwriters' agent for the Province of Quebec.

Suburban agents and New York brokers have received a circular from the promoters of the New Jersey Fire Insurance Company, with headquarters to be at Newark, and a proposed capital of \$200,000 and surplus of a like amount (later to be increased to \$500,000 each). It is expected that the company will apply for a charter about December 15. The managing underwriter chosen is William G. Whilden, who is also chairman of the Organization Committee.

The corporation of Douglas Brothers, of 1 Liberty Street, has been appointed United States managers for two surplus line writing companies, in addition to those now represented in that office. The new ones are the East India Marine and Fire Insurance Company, of Amsterdam, Holland, and the Lloyd Sabando, of Turin, Italy. The East India is quoted as having total cash assets of more than \$1,250,000, with a special deposit in New York in the Mercantile Trust Company of over \$50,000 for the protection of policyholders.

The Empire State Surety Company has sent out to brokers a notice of reduced rates, with more insurance, for burglary and theft policies on contents of safes. The company offers to write insurance in the amount of \$500 for a \$4 premium. This applies to both old and new burglary and theft insurance business.

Uses.

Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.

Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
For these purposes the "select and ultimate" will be most useful.

Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.

Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.

Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.

Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.

Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.

Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.

Warranted Commissions for New Business.
Surrender Values.
Dividends.

New York Exchange Removes Penalty Imposed After San Francisco Disaster

THE New York Fire Insurance Exchange reduced rates yesterday by rescinding the penalty which followed the San Francisco fire. The Eastern Union, which has jurisdiction in the Eastern States outside of the large cities, added 14 new members and decided to advance commissions to agents and the members of the National Association of Local Agents talked to the Legislative Investigating Committee.

The base rate on theatres is reduced from \$1 to 90 cents on fireproof and

from \$2 to \$1.75 on non-fireproof buildings. The base rate on piers is advanced from \$1.25 to \$1.60, except as to semi-fireproof construction. In the high pressure district, bounded by Twenty-third Street, Broadway, Fourteenth Street, Third Avenue, Bowery, Oliver Street, James Slip, New Chambers Street, Chambers Street and the Hudson River, there is a percentage reduction on buildings and contents respectively as follows: Breweries, 15 and 5; churches, 10 and 10; livery and private business stables, 10 and 10;

theatres, after applying new base rate, 10 and 10; listed storage stores, except sprinklered risks receiving an allowance as such, 5 and 5; private warehouses, 5 and 5, and sprinklered risks, 15 and 15.

All except sprinklered risks are to be rerated where the cards show an excess of manufacturing and are not marked fireproof and those in the high pressure district are to be advanced 10 per cent on contents only. Mr. Robb said the Merritt committee had nothing to do with the reduction.

Life Waste in the United States

A BROCHURE of thirty-six pages has been prepared by President Rittenhouse of the Provident Savings Life Assurance Society on the subject of public unconcern in disease prevention. He says:

"Every fifty seconds a life is lost from preventable cause. Every day this loss equals the crews of two battleships. Every year it exceeds the lives lost in all American wars since 1776. At the present death rate from preventable cause over 6,000,000 lives will be needlessly lost in the United States during the next ten years.

"Since 1880 the general death rate has decreased up to age 40, while above 40 it has steadily increased. From age 40 to 50 it has increased 13 per cent; from 50 to 60, 29 per cent; 60 and over, 26 per cent. This is almost wholly due to the heavy increase in loss of life from degenerative diseases.

"Cancer has increased 104 per cent since 1880. Increase by age periods: Under 20, 10 per cent; 20 to 30, 46 per cent; 30 to 40, 50 per cent; 40 to 50, 67 per cent; 50 to 60, 94 per cent, and above 60, 90 per cent.

"Virtually this same appalling rate of increase is found in the mortality

from diseases of the heart, arteries and kidneys. The death rate from these causes has increased since 1880 104 per cent (registration States), and by age periods as follows: Below 20, 17 per cent; 20 to 30, 33 per cent; 30 to 40, 32 per cent; 40 to 50, 60 per cent; 50 to 60, 94 per cent; above 60, 93 per cent. These figures show clearly that maladies properly belonging to old age are reaching to and increasing in the younger ages.

"The reduction in the death rate below age 40 is almost wholly due to the saving of lives from communicable diseases. Tuberculosis has decreased since 1880 48 per cent; typhoid, 42 per cent; diphtheria and croup, 80 per cent, and some others have been almost entirely eliminated. Pneumonia has decreased but 10 per cent since 1880 and has increased in some cities. Fifty per cent of the deaths from pneumonia come after age 40. The death rate from accidents has increased 48 per cent since 1880.

"To check this enormous loss of life a large proportion of which is preventable by the use of ordinary measures, the National Government can spare but 1.3 per cent of its total expenditures; Greater New York, but 1.7 per cent, and 149 American cities

but 1.8 per cent.

"The State of New York spends for the protection of game, fish and forests about four times more than it does for the State Health Department."

PHILA. CASUALTY ELECTS.

At a meeting held on Tuesday new officers were elected to assume control of the affairs of the Philadelphia Casualty Company, which was recently purchased by the Fidelity and Deposit Company of Maryland.

J. Arthur Nelson, who is Vice-President of the Fidelity and Deposit, and William Hugh Harris, manager of the casualty department of that company, were elected President and Vice-President.

The Board of Directors is composed of J. Arthur Nelson, W. H. Harris, B. L. Henderson, all of Baltimore; Herman Hoopes, Edward Hoopes, W. L. Talbot, Robert G. Hazeldine, C. J. R. Sproule, Raymond Pitcairn, F. X. Quinn, Clarence M. Brown, all of Philadelphia, and Kennedy R. Owen, of New York.

Robert G. Hazeldine has been chosen as Secretary, while C. J. R. Sproule has been elected Treasurer.

New Fire Insurance Capital Sought

NEW YORK credit men have taken the initiative in obtaining more fire insurance facilities for the metropolis by inducing high class companies not now represented here to establish agencies. The opinion has been expressed that a sweeping conflagration would bankrupt the companies now doing business here, and William H. Hotchkiss, State Superintendent of Insurance, recently said that the need for more reliable fire insurance by the people of New York City is more serious than that for more bread.

The Fire Insurance Committee of the Credit Men's Association has addressed communications to the Governor of the State of New York, the Mayor of the City of New York, the President of the Chamber of Commerce of the City of New York, the President of the Merchants' Association of the City of New York and the President of the New York State Bankers' Association, asking them to appoint a committee, preferably of one person from each association, to meet with the Fire Insurance Committee of the New York Credit Men's Association, to consider ways and means for securing additional fire insurance companies with which to meet the present situation.

The committee has particularly in mind to bring to the attention of many American and other companies not now represented in New York State and city, the fact that the city has grown and developed very rapidly in recent years beyond the capacity of its present insurance interests to properly protect it, and has been improved by the new fireproof, highly protected buildings, so that the probable opportunities for profit on the part of additional companies are excellent. Many foreign companies, which the committee believe of good reputation, are not represented here. Invitations to them, extended by a joint committee of State and city authorities and mercantile associations, with somebody whose business it is to receive their representatives and help locate them satisfactorily, would, in the opinion of the Credit Men's Association, go a long ways toward solving the problem.

Such companies coming to New York State and operating under the supervision of the Insurance Department, the committee contends, would furnish indemnity in most excellent companies, long established, possessed of large assets, and also would bring considerable funds to America for investment in American securities; new tenants for the office buildings and give employment to a large number of people. The New York Credit Men's Association, the leaders in this movement, now has a membership of nearly 1,100 commission, jobbing and

manufacturing houses, banks and bankers located in Greater New York, representing 298 lines of business. Its Fire Insurance Committee is composed of five members, of which George W. Hayes is the chairman. In discussing the general situation and the plans of the Credit Men's Association Mr. Hayes said:

"In a way the fire insurance companies have suffered in the minds of the public from the fact that the Investigating committee has, on the one hand, very properly been investigating fraud and dishonest practices, and that subsequently the high class and most reputable witnesses have been called and asked questions about insurance matters in a way to confuse matters, and if only by inference to cast unfair imputation and reflection on the business of fire insurance generally. As a matter of fact the New York Board of Fire Underwriters does most excellent work in the City of New York. Constantly looking into the matter of 'unsafe' conditions, and explaining how they can be corrected, substituting excellent devices, such as approved fire doors, instead of the old-fashioned iron door which buckles and does not hold the fire in check, etc.

"The New York Fire Insurance Exchange aims to make rates upon an equitable basis under scientific schedules, conditions of which are known in advance, so that merchants, manufacturers and others interested can construct buildings, knowing in advance what rates will be secured if they conform to the consistent requirements of the Exchange. Whatever real or unjust complaint may be made against the Exchange, it cannot be denied that they are doing business upon a most sensible and businesslike plan of operations.

"Another thing which has not been touched upon in the investigation is that the subject of 'graft' and dishonest practices in connection with the work of those two associations is always stamped out promptly and is almost an unknown quantity. Both associations, the New York Board of Fire Underwriters and the New York Fire Insurance Exchange, make a prerequisite of absolute integrity of all employes who make inspections or have work to do, and this feature is managed in a way that commands the admiration of all who know anything about the matter. Under present conditions if fire pails are not properly installed they are not credited in the rate. If the automatic alarm, automatic sprinklers, or other automatic service does not stand critical test, it is not approved, and the method of rating has been gone into with such care that there are several hundred classifications of property with burning hazards estimated

by actual experience to the extent that reliable data were available, rates being made in accordance with the hazard as found.

"As to the question of erroneous legislation by committees of the New York Fire Insurance Exchange, or New York Board of Fire Underwriters, the committees are rotating—different officers occupy different positions, with constant changes, so that inequality or errors in judgment on the part of the others are constantly being reviewed; further than that, any managing underwriter of a high class company coming to New York to look the ground over would be impressed with the very high class men who have charge of all these various matters.

"There are several points in favor of more companies coming into the State. In the first place the growth of the city has been so great that any thinking person realizes that a twenty story building full of merchandise on all floors amounts to very great value, and a number of these buildings in the same territory makes an enormous amount of value concentrated at this point. We will suppose that a merchant takes a policy for \$100,000 in a leading company. He is told that the company 'reinsures it down'—that is, apportions part of the risk to other companies who, for part of the premium received, take over a certain proportion of the whole, just as a banker accepts a merchant's notes to the amount of \$100,000, which are, in turn, purchased by smaller banks on their own account.

"The disadvantage in this situation, as to a very large policy is, that in case of conflagration, the company which issues the policy might be made bankrupt, and all of the reinsurance on this certain policy would go into the general fund and assets of the company and not for the benefit of the party holding the large policy. The insurance investigation, and, in fact, all investigations, may or may not make changes in present conditions, but it can be said and proven that under existing conditions it is both a safe and excellent business proposition for any high class fire insurance company to come to New York City to transact business here. The more companies that are legally establish in New York State under supervision of the Insurance Department the more equitable will be the regulation of the business and the more advantageous will be the facilities afforded to the insuring public."

No New York employer need look beyond the advertising columns of THE CHRONICLE for LIABILITY INSURANCE.

Insurance News in the West

THE letting of space in the Insurance Exchange Building, as the new headquarters of the underwriters is to be known, has progressed with admirable speed and good spirit. It is no small task to apportion satisfactorily the space on ten floors of a large area office building so as to meet needs varying from large Western departments to small local agencies, but this has been practically accomplished, and with comparatively little friction or dissatisfaction. A list of the tenants shows that the National Life Building will contain scarcely any insurance offices after May 1, 1912, except the National Life, U. S. A., itself. The New York Life Building will lose several of its large tenants. There will be scarcely any insurance interests left in the Rector Building, and all the insurance offices now in the old Otis Block will go to the new building. The Temple, Manhattan, American Trust, Association and Roanoke buildings also will be drawn upon. All the floors of the new building, from the twenty-first down to and including the twelfth, are rented, with the possible exception of a little space, and already there is an overflow to the eleventh.

* * *

Minnesota has swung into line with a State Fire Prevention Association. The time was opportune. Following the St. Paul Conservation Congress by only a couple of months and almost simultaneous with the conference on the reduction of forest fire waste, the new association enters the field with the people of Minnesota waked upon the subject of fire waste through the extensive newspaper accounts of these meetings. The Governor has come out in favor of making the State Fire Marshal law more effective. Heretofore the Fire Marshal has been hampered by want of funds. In States like Ohio and Wisconsin the Fire Prevention Association and the State Fire Marshal co-operate with fine results. The proposed change in the Minnesota law would make the work of the new association much more effective than it could be otherwise.

* * *

The announced programme of legislation for which Iowa agents will work this Winter includes bills providing for anti-discrimination, anti-rebate, a State Fire Marshal, the computing of fire insurance companies' reinsurance reserves on the basis of 50 per cent on annual business and pro rata on term business and permitting the use of co-insurance on buildings worth \$10,000 or more. It is a good programme, but it will meet with much opposition. Unless Governor Carroll has changed his views,

which is not likely, co-insurance is anathema to him. Yet co-insurance is what Iowa especially needs. In the opinion of some well-informed underwriters the advisory rates in the State are too high. Otherwise, they ask, how could loss ratios be about normal year after year, with rates cut to pieces in many parts of the State. Yet they admit that rates have to be made higher than they should be because many of the large risks are so greatly underinsured that companies must look for total losses on what should be only partial ones. If co-insurance could be used on these large risks, forcing the owners to carry a reasonable amount of insurance, lower advisory rates would be adequate.

If an anti-discrimination law means getting advisory rates all over the State because they are secured in a few cities, there will come a howl from assured in nearly every section of the State. If co-insurance could be used the companies could afford to state that they would urge the publishers of the advisory rates to reduce them in consideration of the enactment of an anti-discrimination law, and it is pretty certain such urging would be effective. The real trouble in Iowa does not appear to be the collection each year of too small a volume of premiums considering the losses, but a thoroughly inequitable laying of the fire tax. The farm rates are too low, considering the increased farm hazard. The cut rates in many cities are too low. The advisory rates, where they are secured, are in many cases too high. What is needed is an equalization of rates according to the hazard.

The present arson laws of Iowa are an abomination. Conviction under them is almost impossible, and to bring an arson charge, even where the evidence is strong, is dangerous. If these laws were amended and a Fire Marshal law enacted it would in a few years reduce losses enough to entitle the people of the State to lower rates.

If the whole programme as outlined could be put through together, it looks as if it would be a fine thing for the business and for the people of the State.

* * *

The change in control of the Philadelphia Casualty will make little, if any, difference in Illinois. Conkling, Price & Webb, of Chicago, have one of the best general agencies of the Fidelity and Deposit's bonding department, but they have no need of its casualty department, as they already have splendid casualty facilities in the London Guarantee and Accident. Shipman & Wayne have the Chicago general agency of the Philadelphia Casualty. Luckily the two

firms are on the best of terms, and it is agreeable all around for Shipman & Wayne to take the general agency of the Fidelity and Deposit's casualty department. Outside of a few cities, the Fidelity and Deposit has not a very active surety plant down the State, and it will probably be able to save much of the Philadelphia Casualty's plant without interference with its present agents.

LA SALLE.

PHOENIX MUTUAL LIFE.

Orra S. Rogers has been appointed New York City general agent of the Phoenix Mutual Life in succession to William C. Johnson, who becomes Vice-President of the Columbian National on January 1. Mr. Rogers started in the insurance business as soliciting agent for the Phoenix in Northern New York State; some twelve years ago he came to New York City, continuing as agent of the Phoenix in the agency of which he now takes charge.

PART V. NEW YORK REPORT.

Superintendent of Insurance Hotchkiss has issued Part V, the last volume, of the annual report of the Insurance Department. The book in question comprises nearly 1,400 pages, covering full reports of all examinations of insurance companies made by the department during the year ending July 15, 1910, including in several instances supplemental memoranda of the Superintendent; all amendments to the insurance laws passed at the last session of the Legislature, Court of Appeals decisions, abstracts of all rulings of the Superintendent of Insurance and opinions of the Attorney General on the amendments of 1906 to the Insurance law affecting life insurance, arranged under the section numbers of the law; special reports on town and county co-operative fire associations, insurance supervision in Europe, excise reinsurance agreement; matter relating to amortization of securities having a fixed term of maturity owned by domestic insurance companies, and detailed schedules of fees and taxes charged New York insurance companies by insurance departments of other States. The report shows that sixty-eight insurance corporations were examined during the year, other than town and county co-operative associations, classified as follows: Fire and marine, 27; life, 7; casualty, etc., 7; assessment associations, 13; fraternal beneficiary orders or societies, 14. This volume is prefaced by an account of insurance supervision in New York prior to and after the organization of the department, furnished by William Barnes, the first Superintendent, who served ten years.

LIFE PRESIDENTS IN CHICAGO

Movement of the Life Insurance Centre Toward the Mississippi Valley, Insurance Education in Europe, Systematic Training of Agents and Insurance Taxation Reform Among the Subjects Discussed by the Association.

CHICAGO, Dec. 14.—The annual meeting of the Association of Life Insurance Presidents, at the Hotel La Salle, in this city, last Friday and Saturday, created considerable interest. It was an excellent plan to come West. It gave the Western members a better opportunity to attend, and it also gave officers of a number of Western companies who are not members a chance to learn more about the organization. To some people the chief interest lay in meeting or even seeing some of the big men in the business of whom they have heard for years, but never before have seen.

The programme of this meeting came under four general heads. There were eight papers on various phases of "Educational Forces in Life Insurance." Two were by college presidents and the other six by a lawyer, an actuary, a general agent, two company agency men and a company president. They ranged from life insurance instruction in colleges to the systematic training of agents.

Two ladies discussed women's work in life insurance; two college professors, both well-known economists, discussed investments and taxation, while three doctors discussed phases of life extension work.

The severest criticism that could be made of the programme was that it was too crowded, and, considering that there were so many papers, some of them were too long. However, several of the speakers availed themselves of the "leave to print" and omitted portions of their addresses in reading, which will appear in the printed proceedings. Considerable matter of permanent value for reference, such as statistics, was presented and the proceedings will be well worth study and preservation.

At the opening session there were present perhaps 150 men and half a dozen ladies. It was interesting to study the make-up of the audience. On a rough guess I would say that the various classes of men should be placed numerically in the following order: (1) Chicago local men (largely general agents), (2) Western company executives, (3) Eastern company executives, (4) insurance journalists, (5) consulting actuaries, (6) present and past insurance commissioners and their assistants. The actual members of the association constituted but a small minority of those present.

The value of such a meeting lies largely in what transpires outside of the meeting hall—the exchange of ideas, the making of new acquaintances and renewing of old ones, the meetings of men who have business to transact with each other, and, in this case, a better understanding of each other by representatives of the old companies of the East and the young companies of the South and West, who at times are in danger of overlooking what they have in common by dwelling too much on the points where their interests clash or seem to clash.

At the executive session on Friday evening the following Executive Committee was chosen: Jesse R. Clark, President of the Union Central; John F. Dryden, President of the Prudential; S. C. Dunham, President of the Travelers; Haley Fiske, Vice-President of the Metropolitan; Alfred D. Foster, President of the New England Mutual; L. G. Fouse, President of the Fidelity Mutual; George E. Ide, President of the Home Life; Paul Morton, President of the Equitable; Charles A. Peabody, President of the Mutual; Robert Lynn Cox, who was re-elected general counsel and manager. The Executive Committee will elect officers and choose the next meeting place. Chattanooga and San Francisco extended invitations for the next meeting.

The resolutions, after congratulating the manager on the successful arrangements for the meeting and thanking the speakers, direct the Ex-

ecutive Committee to "consider a plan by which the House of Governors or a group of Governors of prominent States may be persuaded to join in the appointment of a commission to consider and report to the various States upon the general subject of State taxation with suggestions as to a general scheme embracing the taxation of the various forms of property and of corporations and businesses which is common to most of the States."

The resolutions also recite that opportunity for the study of the principles of life insurance from a vocational standpoint is not generally offered in the institutions of higher learning and declare in favor of the association's devoting its energies toward the adoption by such institutions of suitable courses of study which will best prepare men and women to make life insurance their life work and instruct the Executive Committee to call to the attention of such institutions the advantages to be derived from such courses of study.

* * *

Space is given in this week's issue of THE CHRONICLE to "Insurance Moving West" by Paul Morton, "The Training of Agents" by Sylvester C. Dunham, "College and Life Insurance" by George T. Dexter, "Insurance Education Abroad" by Henry Moir, and the report of the Life Extension Committee by George E. Ide. Attention will be given to the other addresses in next week's issue.

INSURANCE MOVING WEST

By Paul Morton,
President Equitable Life.

IT IS hardly necessary to reiterate the aim and object of the Association of Life Insurance Presidents, but in order to briefly inform those who never before attended one of our annual meetings I will say that this association is four years old, and has steadily increased since its creation in prestige, dignity and utility, and has for its sole purpose the promotion of that which is good and the prevention of that which is bad in life insurance.

The work of the association is educational, and in every sense it looks after the general welfare of its policy-

holders. The headquarters of the association are in New York, and usually the annual meetings are held there.

There are many reasons why we are holding this meeting in Chicago. First, the natural drift of all good things, especially in the convention line, seems to be toward Chicago. Again, the centre of life insurance, like the star of empire, is rapidly moving westward in this country, and to-day we find it coquetting with the centre of population somewhere not far from Springfield in this State. This meeting is also being held in

Chicago out of respect to the wonderful valley of the Mississippi, which, as I view it, is bounded on the east by the Allegheny Mountains, on the south by the Gulf of Mexico, on the west by the Rockies and on the north by British America. This valley, agriculturally, commercially, industrially, financially and prospectively, is greater than all the far-famed valleys of history, and yet it is only in the vestibule of its infancy, so far as production and wealth are concerned; and in my opinion is destined to have more political power, more prosperity, more happiness and greater influence in the affairs of the world than any other similar area on the face of globe.

These are some of the reasons why we are here to pay homage to the people of this great valley.

We are also here because of the very heavy investments that life insurance companies have made in the Middle West. We want those who live here to understand that while the estimated reserve held for policyholders residing in the Mississippi Valley amounts to about \$583,000,000, the life insurance companies have invested in this same territory over \$726,000,000; in other words, we are not, as many are led to believe, draining this section of the country of its money in life insurance premiums and taking it East to invest, but, on the contrary, we have actually invested over \$143,000,000 more in this territory than the total reserves for this same territory amount to, and when I speak of the Mississippi Valley in this connection I mean only the Middle States.

Another reason why we meet in Chicago is because Chicago has a larger number of life insurance companies domiciled within its borders than any other city in the United States. There are 231 life insurance companies organized, licensed and doing business in the United States. These companies are located in 116 different cities. New York City to-day has only eleven of these 231 companies.

I consider that the territory immediately tributary to Chicago, and in a general way I mean the corn belt and the Winter and Spring wheat districts, is the very best territory in the world in which to insure the lives of men and women. I believe the people in this great agricultural section are better physical risks than those of any other part of the world, and that mentally, morally and financially they have no superiors anywhere, and as I view the matter there is to be the greatest headway in this part of the country in life insurance expansion. There is sure to be an increasing demand for life insurance in the Mississippi Valley.

Fifty years ago life insurance in the United States averaged \$5.25 per capita. Ten years ago it had risen to

\$99 per capita, and to-day it is estimated as amounting to about \$150 per capita. The average per capita in the Mississippi Valley is said to be only about \$100, or about two-thirds of the per capita average of the country taken as a whole.

Fifty years ago the total outstanding life insurance carried by all old-line life insurance companies doing business in the United States was less than that now carried by Illinois companies alone. Within fifty years the volume of life insurance business has increased from \$165,000,000 to \$13,700,000,000, almost one hundred-fold, though in that time the population of the United States has increased less than three-fold. These figures, which in themselves may seem dry and uninteresting, indicate why we at this time deem it proper to hold a life insurance convention in Chicago.

Western people will be glad to know that as a general proposition the Eastern life insurance companies are making an effort to invest their reserve funds in those sections of the country which produce the premiums. I know of one large life insurance company which five years ago had real estate mortgages in only eleven different States, but which to-day has them in thirty-one different States. I know of one company which has \$6,000,000 less in mortgage loans in New York City than it had five years ago, and which during that time has increased its mortgage loans in other States about \$18,000,000.

American life insurance never stood so well, never was so safe or sur-

rounded by so many safeguards and never offered the public so much for its money as it does to-day.

The expense management is being curtailed. Economies of all kinds have been introduced, and dividends to policyholders are being increased.

The chief ambition of the Association of Life Insurance Presidents is to emphasize the fact that these great life insurance companies belong to the people, and that nothing in the way of regulation, taxation or legislation can be done to injure them which the policyholders will not have to pay.

Recurring to our investments in the Middle and Western States, I wish to say that most of these investments are in underlying railroad securities. I believe that the life insurance companies of the United States own nearly one-tenth of the total amount of money invested in American railways, and personally I know of no better or fairer way to invest insurance reserves, and no way calculated to give more general satisfaction or to be of greater and wider utility than to assist the people of this country in securing and maintaining adequate transportation facilities; and it is the aim of life insurance officials in distributing their investments generally to consider the greatest good to the greatest number.

We are more than pleased to have with us at this meeting such distinguished guests, and consider it a great honor to have so many men here who are so keenly alive to the benefits of life insurance. I take this occasion to thank them for their presence.

INSURANCE EDUCATION ABROAD

By Henry Moir,

Associate Actuary Home Life of New York.

THE subject of insurance education in Europe is a broad and general one, and, as I have been asked to deal with it briefly, it is not possible to enter into a detailed account of the varying phases of such education in each one of the different countries of Europe. We

must consider rather main principles and general questions, and, being familiar with conditions in Great Britain, I have dealt at some length with various forms of education in that country, and have tried to direct attention to any peculiar or interesting features of the subject in the other

European countries. In general it may be said that the technical training is good in all the more liberal countries of Europe.

University training has been introduced in one or two centres, but apparently with the object not of furnishing a desirable addition to the knowledge of a well-educated man, but of supplementing or leading up to some technical course. Throughout the Continent of Europe popular knowledge of the subject is inadequate and poor, and the people generally are probably less well educated on the average than those of the United States.

Technical Training.

The subject of life insurance is that to which I propose to devote most attention. It is the branch with which the Presidents' Association is directly connected. But it is unnecessary on this account to minimize the importance of other forms of insurance or to forget the broad general principle which defines insurance in any form as "a device to minimize so far as may be the consequences of an existing hazard," so that many hazards in addition to the risk of death may be made the subject of insurance.

Actuaries.

The highest form of technical training in life insurance in Europe is undoubtedly obtained through the various bodies of actuaries which exist in nearly all European countries similar to the Actuarial Society of America. Those that are especially prominent are located in Paris, in Amsterdam and in London, and we may perhaps deal principally with the Institute of Actuaries of London, and the Faculty of Actuaries in Scotland as illustrative types of such bodies. The Institute of Actuaries was established in 1848, and obtained a royal charter in 1884, making it a corporate body.

The Faculty of Actuaries in Scotland was constituted in 1856, and was incorporated by royal charter in 1868—that is, eighteen years before the charter was granted to the Institute of Actuaries.

The curriculum of the examinations which entitle students to become Fellows of either body covers a wide range of subjects, and the examinations are conducted so strictly that those who attain the Fellowship degree have a good foundation in each subject, although they may not have specialized in any.

The Institute of Actuaries may be cited as typical, and the students have in the first place to give evidence of a good general education.

It will be observed that less than 40 per cent of the candidates succeed in passing the examinations of either body, and as a similar experience attends those who aspire to be actuaries in America it would appear as if this class of mentality has, like a poet, to be born.

On March 31, 1910, there were 259 Fellows of the Institute of Actuaries, 335 Associates, 348 students and 21 corresponding members. In August, 1910, there were 205 Fellows of the Faculty of Actuaries, 4 Honorary Fellows and 1 Associate, making 210 in all.

Insurance Institutes.

In Great Britain nearly all the large towns have an insurance institute, this being a society formed by those interested in insurance questions and intended to diffuse knowledge of the subject as well as conduct research work.

In 1897 there was formed a federation of the various insurance institutes, and this central body is now called "The Insurance Institute of Great Britain and Ireland." A charter has been applied for, and it is probable that this official recognition will be rendered to the institute at an early date.

Instruction in Universities.

Most universities deal with some problems in the doctrine of probabilities in their mathematical courses, but it is seldom that in the prescribed textbooks illustrations of the subject are taken from insurance problems, yet this doctrine of probabilities in its practical application is doubtless used more in our particular business than it is in any other branch of commerce or of science.

Then again, although life and other forms of insurance have grown to be a most important part of the economic system and have become a necessity in commercial transactions, as well as in social life, yet the subject is inade-

quately treated in textbooks of Political Economy and it is frequently forgotten altogether by students of the so-called Social Science.

In the study of political economy the subject of insurance has a very small place—much smaller than the magnitude of the business would seem to warrant, and out of all proportion to the time devoted by economists to bills and banking. Even in mathematics the average university course is scarcely sufficient to enable a graduate to pass the first examination required by the Institute or the Faculty of Actuaries, or, in America, the examination of the Actuarial Society.

Diffusion of General Knowledge.

The diffusion of general knowledge on the subject of insurance is exemplified perhaps more in the acts of the Legislature than in any other way.

The Workmen's Compensation laws give perhaps one of the best indications of the spread of insurance education in its relationship to social science.

Then again the same scientific principles are disseminated and discussed in connection with the old age pension plans now in vogue in several European countries.

In France there is not much general education which can be considered as dealing with insurance in any form. The University of Paris has recently established a chair in social insurance and there is a progressive and vigorous Institute of Actuaries.

Probably the most intelligent knowledge of life insurance is exhibited in one or two of the Swiss Cantons.

THE TRAINING of AGENTS

By Sylvester C. Dunham,
President Travelers of Hartford.

IN ONE of his visits to Hartford the manager of our association observed the method employed by the Travelers Insurance Company for preparing men for insurance work, and he has asked me to briefly outline the plan and some of its results, believing it will be of interest to others.

Within a generation life has become exceedingly complex. The professional man of fifty years ago worked successfully in every branch of his profession, but his successor is known as a patent lawyer or a corporation lawyer, and corporation lawyers are now further classified as railroad lawyers, insurance lawyers and many others. The modern invalid has almost as many doctors as he has vital organs, and it may be that the present encouraging movement for church unity is the only influence that will avert the necessity in the next generation for as many confessors as there are phases to a man's moral and spiritual nature. Many business enterprises embrace such a diversity of affairs that men of exceptional ability

are needed for department work which they specialize and have subordinates who specialize still more closely.

The business of insurance is by no means exempt from this tendency, and as it grows in magnitude, diversity and usefulness, every year witnesses the greater specialization of work in its various branches.

Many men still active in life insurance can recall the time when contracts were simple, when there was no cash, paid-up, loan or other value than that which accrued to the heirs of the policyholder, when one company was founded on homeopathy and another on total abstinence, and many good people maintained that to insure one's life was evidence of total depravity; when reserves were less mysterious than the precession of the equinoxes, and when successful agents, or nearly so, were made of men who had failed at everything else.

The progress of life insurance has been rapid and its adjustment to the circumstances of those who need it has presented many questions. Experience has shown many ways in

which it could be made more helpful, by which forfeitures could be waived, by which the interests of the policyholder could be made more secure and the confidence of the public established. Executives of insurance companies have been so much engaged in the solution of these problems that the systematic training of the men who represent the company in the field and with whom the policyholders are in direct relations has been somewhat neglected.

That the usefulness of life insurance and the purpose of life insurance companies have been misunderstood by many is the penalty for this neglect. In too many cases the agent, while a truthful and conscientious man of sufficient ability, has lacked training, and what he has told his clients about his company and about things in the policy and things not there has been inexact, and it takes little of that to give a good company a reputation it does not deserve.

It has been estimated that a company that gets a good field man out of five experiments is doing pretty well. Four who do not succeed do a vast amount of mischief for the one good man to repair, and it seems material to inquire if there is not a better way than to accept all who come—good, bad and indifferent—and find out by errors that are always charged by the public to the account of the company the one in five worth keeping. The only apology to be offered for this method is that it is inexpensive, because such experiments are made on a commission basis, but it would be a far better answer to show that the ratio has been turned the other way about and that four good agents are found among every five candidates.

It is not the purpose of this paper to show that a plan has been devised whereby a six weeks' course of instruction will completely remedy this evil and completely educate a man in the principles and practice of life insurance and in the art of salesmanship, nor is great originality claimed in opening a department for the systematic training of men for insurance work. That method was rather forced upon the company by the rapid growth of its liability business, which is a complex and recent form of insurance for which not many men have qualified themselves. Men were needed and because they could not be found they had to be made. The plan of training men without previous insurance experience worked so well in the branch of the business for which it was devised that it was extended almost in the first year to others, and satisfactory results have been achieved in all.

For this work some business experience is the best preliminary training. Among the recruits are many salesmen, not a few who have been engaged in manufacturing or banking, an occasional lawyer or teacher, and others of various employments, all under thirty-five years of age. No

candidates are accepted who have been unsuccessful. After six or eight weeks' instruction these men are ready to begin work in the field as branch office managers, cashiers, adjusters, auditors and as solicitors. Six years of observation has shown that the home office training is most beneficial. If rudimentary, it is thorough and accurate as far as it goes, and provides a foundation of principles upon which can be built development and success.

The instructor is a man of experience in all the branches of the company's business, who between terms refreshes himself by practical home office and field work. The conversational method is employed in the classroom, and there and outside pupils read textbooks and analyze contracts and rates and otherwise study the subject of insurance and the art of salesmanship. Officials of the company and visiting representatives from the field sometimes participate in the work of instruction.

An acceptable candidate enters the service of the company when he enters the classroom and receives compensation from the beginning. Exceptions to this practice are made when agents of several years' experience want to spend a few weeks at the home office training school to improve their knowledge of principles and methods and to add to the accuracy and comprehensiveness of what they already know.

The beginner devotes the first three or four days or more to the study of the history, organization and practices of the company. He is then assigned to the division in which he is expected to work. If in the life department, which is the one of most interest to us, a week is spent in the study of life insurance history and its fundamental principles and practices. An understanding of the elements prepares the student to discuss, analyze and compare contracts. Considerable memory work is required in order that the advocate may accurately and with little hesitation explain the provisions of the policies. During this period the best methods for interesting men who need it in the subject of insurance are explained and illustrated. Much time is given to consideration of the forms of insurance appropriate to the circumstances of men who have special needs to be supplied. During the following week demonstrations are practiced, the effect of which is that the pupils and instructor review and criticize among themselves the knowledge that has thus far been acquired and apply it as it must be applied in actual work in the field. These exercises develop the keenest interest among those who engage in them and who are called upon to match their wits, readiness, memory and persuasiveness against the like talent and knowledge of the other men. What is lacking is discovered and the man whose deficiency is shown is diligent in supplying it.

The same instruction is continued during the fourth week, to which is added information of the company's branch office and agency system, the rules and practices under which agents account for the work they do and by which relations are maintained by the home office with the branch offices and the individual workers.

The training and discipline of the home office school is continued from four to six weeks and in some cases longer, depending upon the aptness of the pupil and the work, sometimes a specific position, for which he is training. When a man is ready for practical field work he is assigned to a branch office district and begins under the supervision of an experienced manager.

The number of men thus far trained is 267, of which 132 are now in the company's service and concerning whose permanent success there seems to be little doubt. Several who received training and thereafter did good work have resigned and have accepted positions as department managers in general insurance agencies. The service of these men is not lost, because in placing business of the agencies with which they are connected they very naturally and properly favor the company in whose service they were trained. Some have been persuaded to enter the employment of other companies that recognize the value of their training as cashiers, managers and solicitors. If we add this considerable but unwilling contribution to the general welfare to the number of men who remain with the company we find that the ratio of successful insurance men who came to the training school without previous insurance experience is raised to something like 75 or 80 per cent.

Many men trained for cashier's work are selected when employed with the expectation that they will develop into producers or agency managers. They are given appropriate instruction in the training school which is supplemented by a term of service in the accounting department of the company's home office. They are generally under twenty-five years of age at the time of their employment and are expected to work in the cashier's division of a branch office at least two years, unless by reason of exceptional merit they are sooner advanced to more responsible duties.

The same method is employed respecting young men who are employed to act as payroll examiners in the liability department, in the discharge of which duty more than the average amount of tact may be displayed. In this branch of the business the premium paid by a manufacturer or other employer depends upon the wages expended during the policy year. His accounts are reviewed for the purpose of adjusting the premium, and the young man who is able to do this work and take away

with him an additional sum of money and leave in its place a favorable impression is possessed of qualifications that can be well employed in soliciting business. The well-instructed and well-disciplined cashiers and their subordinates and the payroll examiners, of which there are no less than 125 in the company's service, constitute a considerable part of the field from which the company supplies vacancies in its agency organization.

The best men are those caught young and taught insurance as practised by the company they are to serve. Good recruits have been obtained who have been employed by other companies. Some of them have for a while been more inclined to give instruction than to receive it, and, while it is charged against the modern man of affairs that his business is his religion, they have not always at first displayed the zeal usually attributed to the recent convert.

A good education is essential to success. Mental discipline and a thoughtful habit are part of the necessary equipment for obtaining an adequate understanding of the relation of insurance to other great social and economic influences. It is a subject that demands much accurate and orderly thinking and an appreciation of

the nature and progress and purpose of civilization. But the college man does not always meet with the most immediate success. In assuming the responsibilities of life in many employments he has to readjust his attitude, and that it is not always an easy process may mean that the relation of college training to practical affairs is the most important problem the modern educator has to solve. Instead of taking up insurance he seems to descend to its level. When it finally engages his interest he can turn to good account all the resources of a disciplined mind.

In many of the activities of life men are still obtaining their training in the old-fashioned and hardest way, learning how to avoid errors only by making them and how to achieve success through the bitterness of repeated failures. Many thus trained in the school of adversity become pretty sure of what they know, but the waste involved in the process is large and unnecessary. Those who finally succeed, succeed admirably, but the number who do so is disproportionate in comparison with those who yield to discouragement. The new and better way is to prepare men with knowledge to meet difficulties which to the uninstructed seem insurmountable.

THE PART OF THE COLLEGE

By George T. Dexter,

Second Vice-President Mutual Life.

THE college is one of the important factors in the civilization of the race. As an agency for the betterment of humanity it is second only to the Christian religion. Into its hands is largely committed the training of those who, at a later stage, will take the leading part in directing the affairs of the world. That training, to be broad and comprehensive, as it must be, should include a study of at least the essential principles of life insurance.

Life insurance also is a most important factor in civilization. As a system of saving, a provision for dependents and for one's own declining years, it concerns directly more people than any other investment. Yet it is safe to say that there is no other one subject of which investors in so great proportion are totally and contentedly ignorant; and, because of their ignorance, the people have always been the easy victims of sharpers who swindle in the name of life insurance, and of the well-meaning promoters of unsound systems—the plausible but delusive schemes which are still widely flourishing.

It is fitting that an influence so potent as the college should be enlisted in behalf of an economic institution so essential to human happiness and progress as life insurance.

Public enlightenment on the subject may well begin in the common school. Although life insurance in its broadest

scope is a complicated subject, its essential principles, such as would enable the average man to distinguish between the good and bad, the safe and the unsafe, are extremely simple. To this extent, instruction on the subject is as appropriate as calculations of interest and the rudiments of physics. This essential knowledge, such as every man, and woman too, should have, can be conveyed with the aid of blackboard and charts, in a few simple lessons, chiefly or wholly oral, but supplemented perhaps by a few printed pages of instruction expressed in simple, ordinary language, for those who desire to pursue the subject a little further. To this extent at least, instruction in life insurance should be available to all students of preparatory and high schools. It should not be altogether postponed to advanced economics or limited to special classes.

This elementary instruction is with reference to the student's future position as an insurant. Some day he will buy insurance. Let him be taught how to buy it wisely. Let him learn its value, as he learns weights and measures and foreign coinage. He will then better decide when some day in the purchase of insurance he not simply expends money but performs a civic duty.

Now, if for his own guidance and protection, it is important for the purchasing layman to have some ac-

quaintance with the principles of life insurance, it is even more necessary for the life insurance agent or salesman, who is to instruct and advise the layman, to have a comprehensive knowledge of the subject. The college can successfully qualify him to advise the prospective applicant as to the form of policy that is best suited to the latter's needs; it can equip him with the knowledge necessary to enable him to expose the fallacies of false systems, and the errors of misrepresentations of disingenuous competitors; it can qualify him to understand at once the peculiarities of the new contracts and new propositions which are bound to confront him daily in the pursuit of his calling. All this would make him stronger as a solicitor, because it would enable him to speak with the confidence of the man who knows that he is right.

The college or university can go further. It can give at least a preliminary training in actuarial science. In its medical school it can give some inkling of the principles of the selection of risks. It can broaden the view by suggestions of the great questions of finance, such as securities and interest rates, which underlie and guarantee the perpetuity of the system of insurance.

So much as to theory. When we come to consider whether any educational system can train agents for the practical work of soliciting, we confront a condition. Proficiency in this line is attained only in the school of actual practice. The acquisition of mere technical knowledge, such as callow youth can gain in college or special school, does not raise even a presumption of future success in life insurance salesmanship. To attain this, peculiar native talents, a broad knowledge of men and affairs, a deep insight into human nature, are essential. These are acquired, if at all, only with age and experience.

The young lawyer or doctor is first entrusted with the simplest problems of the profession, from which he gradually advances to matters of greater moment. For the young life insurance solicitor there are no such opportunities. He starts in at once a full-fledged agent. He is met at the very threshold of his career by the same problems that puzzle the older and ablest solicitor. His general agent or preceptor cannot assign him the simple cases at the start, for these can not be selected in advance.

The college course cannot make up for the inexperience and immature judgment of youth. As a solicitor, whatever his special training may have been, the new agent must commence at the bottom, with fewer chances of success than are enjoyed by the older man, who, in mingling with men, has acquired some knowledge of general business, some experience of the world, some insight into human nature. The college graduate is

handicapped by his immature age and his ignorance of the ways of the business world. He is a novice pitted against experts. He must learn as do other novices in the professions.

The new graduate of a law school, though he may have some general knowledge of the doctrine laid down in the books and a considerable fund of undigested ideas on the subject, is not yet qualified to advise experienced men of business regarding their complicated affairs. He, therefore, associates himself with an old lawyer, and thus gains an acquaintance with the theory and practice of his profession which no school can give.

The young physician may proudly decorate his office wall with the newly framed medical diploma, but without that confidence of the public which age and successful experience give he will wait for substantial patrons in vain. On the other hand, associated with an older practitioner, he gains a practical knowledge of the physician's work, and in time acquires a remunerative practice.

Can the college meet these practical requirements? So far it has not attempted to do so. Its effort has until now been generally limited to popular courses of lectures, remarkable as an innovation and for the interest they have aroused both among students and lecturers. Insurance has thus received high recognition as an important branch of economics, grouped with railroading and banking. Naturally the business of insurance as a dignified calling has thus been presented in a new and favorable light before many young men; and consequently numbers have taken it up after graduation. It will be interesting to learn, after a proper length of time for experiment, what degree of success is attained by these gradu-

ates and whether the percentage is higher than among other classes of agents. It is in a spirit not of criticism but of suggestion that the opinion is advanced that beyond awakening an interest in insurance, the present college courses do not aim to accomplish much and that they fall far short of creating and equipping agents. For one thing, the majority of students who take the insurance lectures are influenced in no negligible degree by the desire for an easy optional in senior year. The elements of life insurance are so simple, and the classroom is so sheltered from the storms of competition in the outer world, that the student is apt to find many shocks when, leaving theory, he attempts to sell policies. It is like hearing a lecture on swimming and then being thrown from a cliff into the sea.

Popular courses of insurance are therefore to be regarded, as training schools for agents, in somewhat the same light as senior year courses in Constitutional Law—information that a gentleman ought to have, but purely introductory to any real knowledge of the subject; and to be followed, in the case of those entering the profession, by hard work in special technical classes. My judgment, therefore, is, that in addition to the present courses, we need postgraduate courses, affording instruction in all branches of life insurance, and giving a degree or diploma. A summer school might be conducted upon the practical lines of forestry schools, which after courses in botany, take the students to live among the trees.

But after all the lectures and the books the final course should be the actual selling of policies in company with real insurance men, for the college can do more than instruct him merely the science of life insurance.

With experienced solicitors as instructors, may it not afford him at least some training in the practical work of canvassing? Soliciting life insurance is, first and last, salesmanship. It has been demonstrated that—given a certain aptitude for the work—the art of salesmanship can be taught. There are so-called "natural salesmen," just as there are natural mechanics. Either may succeed without special instruction, but both will become more efficient or will advance more rapidly, under competent tuition. Any really successful canvasser in any other line of business ought to succeed as a life insurance solicitor. The man who can sell a cash register or an automobile can sell life insurance, though it may be conceded that in some respects the latter vocation is fraught with the greater difficulties. Nevertheless, the same rules apply in each case, the same principles govern. The manner of approach, the presentation of the case, the art of persuasion, numberless effective arguments such as the experienced solicitor can suggest, will constitute a feature of the course in salesmanship.

Instruction in psychology will be an important branch of the life insurance course. Every efficient salesman is a psychologist, whether he knows it or not. He is an adept in moving the minds of others. He says and does the right thing at the right time, because, intuitively, he perceives what line of argument will be effective in the particular case, and knows precisely when to close the argument and get the name upon the dotted line. He recognizes the "psychological moment" on the instant, though he may not call it by that name. This faculty of saying and doing the right thing we

designate "tact," which, after all, is only a shorter term for the "instinctive application of psychological principles."

The science of the mind—in other words, the perception of cause and effect in their relation to mental phenomena—intuitive knowledge of which marks the natural salesman, can be acquired, and once acquired will be applied unconsciously, instinctively.

Theories, however, do not always hold good in practice. Precept is well enough, but example is far better. Can the special school or course offer a substitute for practical experience in the field? The law school has its moot-court to familiarize the student with methods employed in the trial of a case—the selection of the jury, the examination of witnesses, the arguments of the lawyers, the charge of the judge to the jury.

The medical school has its hospital practice, and it has its clinic for the examination and treatment of patients in the presence of the students, affording instruction and practice in the science of medicine and surgery.

Cannot a special or post-graduate course in life insurance offer similar facilities for putting into practice the theories of the lecture room? Students may be appointed to solicit one another, coached and criticised by instructors; or the latter may themselves, as canvasser and canvassed, present illustrations of the demeanor, the objections and the protests of the prospective applicant under the ordeal of solicitation, with the arguments and answers of the expert solicitor.

These made-to-order methods may be helpful to a degree, but they are not the real thing. The student, in canvassing a fellow student, feels none of the deadly timidity, embarrassment and hesitation which assail him when in actual practice he approaches the busy, brusque, perhaps uncivil, prospective applicant, to whom, for the moment at least, he is persona non grata. In the fictitious canvass he may be cool and self-possessed. He is at least in no fear of the prospective applicant—a fear that is far more depressing than the natural shyness which he may feel in the presence of his class.

Why may not the life insurance course include actual solicitation in the field, under the direction of, perhaps at times in actual co-operation with, the expert instructor? The student may be sent out in search of available material—to obtain the names and addresses of eligible persons, their ages, the insurance they carry, and any miscellaneous data that may be useful or convenient in a subsequent canvass. Having made his report, with a statement of his experience, he is duly coached as to the canvass of such case or cases as seem most promising. When expedient and practicable, an instructor or more

experienced solicitor leads or assists in the canvass. Always there is the subsequent review of the case, with a study of the errors made, and the remedies and improvements that the circumstances suggest.

There is nothing new in the plan here briefly outlined, unless in its suggestion as a feature of the special or post-graduate college course, for it is the method long used by managers and general agents in the training of new men as solicitors.

To sum up, I suggest the incorporation in the regular college course of a minimum amount of instruction in life insurance for all, and in the special or post-graduate school with its more comprehensive curriculum for a selected few, the general instruction for all to be of the simplest character, chiefly or wholly oral, and limited to a dissemination of such knowledge of essential principles as every man and woman should possess. The post-graduate or special course, perhaps the course of a Summer school, should include a more extended study of the subject, a preliminary training in actuarial science, and, for

prospective agents, in addition to instruction in general principles, a training in the theory and practice of soliciting.

It is not to be supposed that in the discussion of these questions I have in mind anything beyond the general rule, or that I fail to admit the exceptions to all rules. Very young men, with little or no technical knowledge of life insurance but endowed with peculiar natural gifts—great persuasive powers, abundant self-confidence and innate knowledge of human nature—have sometimes succeeded as life insurance solicitors from the very first, in spite of their youth and inexperience. Likewise, men of older years, who have not found congenial or profitable employment in other lines, and who were also without a scientific knowledge of the business, have been large producers from the beginning. These are the exceptions, and even these would have done better if not a larger work if possessed of broader knowledge of the principles of the business, for they would have been wiser counselors of the insured.

LIFE EXTENSION REPORT

By George E. Ide,
President Home Life of New York.

IT IS always a pleasure to enter upon new and untried lines of activity, and in that respect the work of your Life Extension Committee has been most agreeable. It is, however, necessary for pioneers to move with extreme caution.

The problem before us has been to decide in what direction activity can be best exercised and to what extent managers of life companies would be justified in expending the policyholders' money in the work of improving general health conditions and in the education of the general public on the subject of hygiene and sanitation.

By some the subject of life extension has been regarded as too visionary to receive serious attention by this association and the benefits of any movement in this direction as too uncertain to warrant either the companies or the association in spending any money in its development. The contrary is true. The lengthening of human life is a plain business proposition of the greatest economic value to the country at large and of especial value to life insurance interests. As our general counsel has aptly said in his paper read before the Senate Committee on Public Health and National Quarantine at Washington in advocacy of the bill to establish a Federal Department of Health:

"The conservation of material resources is of great importance, but the conservation of human life is of greater importance. It will save as many dollars, and by saving also sorrow and suffering will contribute more

to the happiness and contentment of the American people than water powers and coal fields. To conserve the health of America is to conserve its greatest and most important natural resource."

In our staff of agents scattered all over the United States; in our army of medical examiners numbering at least 80,000, and distributed throughout the cities and villages of our country; in the vast number of policyholders amounting to about one-fifth of our total population, we have the material for the dissemination of truth on this all-important subject and for the institution of an aggressive and successful campaign.

Up to this time your committee has been unable to formulate any definite plan by which our association could directly approach the policyholders of the country upon the subject of life extension, and it has been compelled to reject, as impracticable or too expensive, certain suggestions which have been made. Its work, however, has not been without result. The matter has been brought prominently before the executives of many companies and public attention has been turned toward this most important work.

Professor Fisher, in a recent paper before the International Association of Accident Underwriters, mentioned what is already being done by several companies. He called attention to the new sanitarium of the Metropolitan Life and to the fact that this company had engaged visiting nurses in certain cities to care for its invalid

policyholders; to its establishment of a health magazine to distribute health literature among its policyholders, and to its indorsement in various ways of the movement for a national Department of Health.

He spoke of the fact that the Provident Savings Life Assurance Society had established a health bureau for the issuance of bulletins of health information among its policyholders, and for the granting of free medical examinations to those of its policyholders who desire to avail themselves of this privilege.

He said a certain group of companies in our association had gone beyond the body of their own policyholders; that they were giving free advice to impaired applicants for insurance and suggestions for their benefit; that several other companies were publishing suggestions as to health reform in their magazines to agents, and that certain fraternal societies had also entered the campaign. It seems to us, however, that the most important and far-reaching work of all is that described by our counsel, who says that "practically all of the companies represented in our association are giving their moral support to the movement for the prolongation of human life."

I have heard it stated that this movement has up to the present time only appealed to the executives of a few life insurance companies. Out of a total of 28,000,000 policies in force in American companies our members carry 78 per cent, or 22,000,000. Of this 22,000,000 93 per cent, or 20,500,000, are in companies which are now engaged in individual work along health improvement lines. The activity of these companies is in various lines, as already described.

Therefore, although the association has not as a body undertaken any definite campaign, we can rightly assert that the subject of life extension is now receiving more attention than ever in the past, and that it is a live and active issue in the minds of most life insurance managers.

It appears to your committee that, in addition to what has already been done, there is a certain field of activity which the companies can enter with little or no expense and with the prospect of accomplishing great general good. Throughout our country in all branches of our government we have during the last fifty years made great advances in the matter of perfecting and extending the work of our departments of health. Every well regulated community now has its Department of Health, and these are conducted with greater or less efficiency and under a system which is more or less effective. In many of the newer States and more sparsely settled communities little attention is paid to this important subject. In co-operation with the various boards of health and other kindred departments the insurance companies, through their medical examiners and

agents, can accomplish an immense amount of good.

Your committee would, therefore, recommend that a Bureau of Health and Sanitation be instituted within our association, this bureau to undertake at once the collection of statistical information regarding registration laws, health departments and other agencies showing the extent to which the people in their organized capacity have undertaken to improve health conditions. The companies would doubtless co-operate in the work of such a bureau.

It might be well also to instruct the officers of the association to give their active support whenever possible to the enactment and enforcement of laws having for their purpose the prevention of disease, whether prohibitive in character or in the nature of extending the field and efficiency of health departments.

Our counsel assures me that this work can be done with no expense other than the employment of a little clerical help. When this preliminary step has been taken the association may find it proper in the future to employ one or more experts in sanitation to investigate on behalf of life companies the conditions existing in various localities and to suggest, when requested, methods of improving these conditions. In other words, our first step should be to inform ourselves accurately as to existing conditions, and to lend our hearty support to the general movement in so far as it can be done without material increase in the expense of maintaining the association, and later on to follow up this preliminary work by an initiative of our own.

1860 50th YEAR 1910

Contingency Reserve (Surplus)	655,149.17

THE LEADING FIRE COMPANY
OF THE WORLD

[of Liverpool, England.]

In New England

BOSTON, Dec. 14.—It is intimated that the reduced scale of commissions proposed by the Eastern Union is causing considerable discontent among the local agents of Massachusetts and New England generally, and there are those who see in that proposition, if consummated, the potency of much apathy on the part of the agents in regard to resulting legislation of a character detrimental to insurance interests that may be proposed this Winter. The agents represent that hitherto they have acted as a buffer between legislative oppression and the companies, and they do not view with relish the prospect of being sacrificed when the pinch comes. As far as New England is concerned, it is stated that it has been the least costly of any section as regards the running expenses of the fire insurance business.

Massachusetts agents are not very enthusiastic over the law adopted last

year making non-payment of premiums by agents or brokers prima facie evidence of larceny. The trouble with the law is that it makes no provision to compel payment by the assured, whose delay is usually the primal cause of delinquency in payments. Thus it happens that many times a broker uses the money contributed by a paying client to eke out the deficiency caused by the laggard, thereby doing great injustice to the former. Furthermore, cancellation without return premium "does not go" in Massachusetts, even if the assured has not paid, and the adoption of the law in force in New York, or the substance thereof, permitting cancellation of non-paid policies after five days' notice, would be a desirable measure for the Great and General Court to consider this Winter.

The Exchange Slate.

At last Saturday's meeting of the New England Insurance Exchange

the Nominating Committee reported officers for the year 1911 as follows: President, J. W. Grover; First Vice-President, A. K. Slade, Jr.; Second Vice-President, W. H. Lewis. Executive Committee—R. B. Ives (Chairman), H. A. Wiley, G. G. Bulkley, J. H. Mills, A. L. Bliss and H. B. Sly.

The recommendation as to moving picture machines was adopted and is soon to be promulgated. It will reduce somewhat the charges for approved equipment, and arranges for a thirty-day permit to be used any time during the year, instead of thirty days consecutive.

The following committee chairmen were appointed: E. S. Anderson, Penobscot County, Me.; J. W. Grover, Cambridge, Mass.; W. F. Dearborn, Cumberland County, Me.; C. H. Wilkins, Summer Hotels. Frank L. Owens, special agent of the County Fire, was elected an active member of the Exchange.

Massachusetts Accident.

The celebration of the twenty-seventh anniversary of the Massachusetts Accident Company on Wednesday and Thursday of last week went off according to schedule and was entirely successful. President McNeill set forth the enviable condition of the company and the bright prospects ahead. He attributed its success to the underlying principle upon which it was established by its founder, the late George E. McNeill, whose idea of a successful business was one based upon the Golden Rule. An interesting feature of the dinner with which the celebration came to an end was the presentation of souvenirs of the agents' esteem to Mr. Adams, agency manager; to his assistant, Mr. Roe, and to Mr. Bacon, claim manager.

Out West the Massachusetts Accident has recently been admitted to Missouri and Ohio, in addition to Illinois and Michigan, which States it

had entered earlier in the season.

New England Brevities.

At a meeting of the Stamford (Conn.) Board of Fire Underwriters last Thursday Secretary Putnam, of the National Association, addressed the local men in regard to the work of that body, and W. H. Squire, of Meriden, described the work and object of the State Association.

* * *

Following the transfer of Special Agent H. M. Fenton to territory radiating from Boston, J. B. Knox, Jr., has been appointed special agent of the Liverpool and London and Globe for Connecticut, Western Massachusetts and Vermont, with headquarters at Hartford. Mr. Knox, who is a son of Secretary Knox, of the Phoenix of Hartford, is at present special agent of the Reliance of Pennsylvania, and will assume his new duties early in 1911.

* * *

At the December meeting of the New Hampshire Life Underwriters' Association, held at Manchester last week, interesting addresses were made by A. J. Birdseye, general agent at Hartford of the Mutual Benefit, and Charles E. Fish, general agent at Boston of the Phoenix Mutual.

* * *

F. W. Matthews has been appointed special agent of the Aetna for Eastern Massachusetts and Rhode Island. This is part of the territory heretofore in charge of Mr. Hiscock, now manager of the Aetna's Boston office. The announcement of the appointment of a special agent for Maine and New Hampshire is expected soon.

* * *

President A. W. Neale, of the National Association of Local Fire Insurance Agents has been invited to testify before the Investigating Committee of the New York Legislature, together with Chairman C. N. Woodworth, of the Joint Conference Com-

mitted; Chairman George D. Markham, of the Committee on Legislation, and Chairman Lyman M. Drake, of the Agency Qualification Committee. E. J. Tapping, of Milwaukee, and Charles W. Cool, of Glens Falls, New York, will also appear at the same time. The date set to hear the testimony is December 13 and 14.

* * *

The Standard Fire Insurance Company of Hartford, of which M. Lewin Hewes is President, and R. P. Anthony Secretary, has been admitted to the co-operating list of the National Association of Local Fire Insurance Agents.

* * *

The slot-machine policy of the Great Eastern Casualty—premium six cents and duration of contract twenty-four hours—has been approved by the Massachusetts Insurance Department, and will be issued in that State after the first of the year.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

Chronicle Paragraphs

DAVID J. WHITE has been appointed agency director of the Puritan Life to succeed J. D. E. Jones in the agency department. Mr. White has been in the insurance business for the last twenty or twenty-five years in this section of the country and has been a successful writer of insurance in partnership with R. H. M. Dickinson. Mr. White is at the present time clerk of the Rhode Island Senate and Deputy Commissioner of Railroads for Rhode Island. The company has also appointed John R. Moodie actuary to succeed Charles G. Smith, who has been appointed State Actuary for Massachusetts. Mr. Moodie is a native of Scotland and has been associated with the City of Glasgow Life Assurance Society. From there he came to New York City, where he was with the New York Life for a short time, and then with the Germania Life. He is an Associate of the American Actuarial Society and a Fellow of the Faculty of Actuaries in Scotland.

In the "Maharatta," of Poona, India, in its issue of November 13, there appeared in its editorial column this item: "The following challenge to 'G. B. P.' appears over the signature of 'Phoenix' in the 'Commerce,' of Calcutta, dated October 26:

"A strange thing has happened. An opponent of the coming Insurance act for India has entered the arena and has thrown down the gage of battle. And his name is Phansalkar, a High Court pleader of Satara. Every genuine insurance man in India, even those who have Swadeshi on the brain, are in favor of some form of insurance legislation for India—except Mr. G. B. Phansalkar. I have his weird arguments before me as I write, but there is no room this week for comments. As I glance down the printed dissertation, however, I come across the following remarkable declaration: "Everywhere State intervention by laws with the conduct of the insurance companies has been cried down where such laws exist." And the laws in the forty-six States of North America, "instead of doing any good are positively doing wrong." You will get the S. C. on your track, Mr. G. B. P., unless you are careful."

The Insurance Handbook of the State of Illinois for 1910-1911 has just been issued by the Rough Notes Company of Indianapolis. It gives the location of every licensed company, every licensed agent and every Illinois member of insurance organizations. It also contains the official roster of every company licensed by the State of Illinois, the resources and liabilities of all the companies, their Illinois business and the statutory re-

quirements of Illinois relating to insurance.

* * *

On Wednesday of last week Governor Draper sent to the Executive Council the reappointment for three years of Frank H. Hardison as Insurance Commissioner of Massachusetts. Mr. Hardison, after receiving a collegiate education, entered journalism, and was for some years in charge of the insurance column of the "Boston Herald." He became examiner of the Massachusetts Insurance Department in 1896, was subsequently appointed Deputy Insurance Commissioner, and was promoted to the Commissionership in 1907. Capable, faithful and painstaking, Mr. Hardison commends the esteem of those who have business relations with him. His reappointment was confirmed by the Council yesterday.

Superintendent of Insurance Hotchkiss will investigate the charge made by Milton G. Bucky, a lawyer, acting for Thomas Barber, of No. 105 Rogers Avenue, Brooklyn, that the Knights of Pythias Insurance organization is insolvent. Attorney General O'Malley was asked, in a letter from Lawyer Bucky, to begin action against the Knights of Pythias. The letter requests the appointment of a receiver of the organization's assets in this State, and the allegation is made that on its own showing it is insolvent. It states further that information supplied by the Supreme Lodge of the order shows that at the present time it is carrying insurance of the fourth class amounting to \$20,667,500, with cash on hand to pay this insurance aggregating only \$615,563.

* * *

Dr. Eugene L. Fisk has been elected Secretary of the Provident Savings Life to succeed Robertson G. Hunter. Dr. Fisk will continue his duties as medical director of the society.

OBITUARY

William Hanhart.

William Hanhart, President of the Bankers' Life Insurance Company of New York, died at his home in Brooklyn on December 7. He was born in England in 1849. When he came to this country, he entered the employ of Moffat, Davidis & Company, of New York and New Orleans. Later he went with Ladenburg, Thalmann & Company. He was assistant comptroller of the Emigrant Industrial Savings Bank, and a director of the Life Association of America, the Knickerbocker Investment Company, the European American Bank, and the Union Mutual Real Estate Company. He was the founder of the savings bank section of the American Bankers' Association.

ESTABLISHED 1836. ENTERED U. S. 1848.

The statement of the condition of the United States Branch on the 1st day of January, 1910, in accordance with the Laws of the State of New York, is as follows:

ASSETS \$13,885,802.88
 LIABILITIES 8,766,622.58

SURPLUS \$5,119,180.30

As an illustration of the Company's practice in maintaining its assets in the United States in years of excessive loss, the following figures may interest policyholders:

Year.	Assets at January 1.	Income	Expenditure.	Excess of Expenditure.
1871	\$3,054,361	\$3,163,901	\$5,122,653	\$1,958,752
1872	3,640,450	3,733,101	4,484,999	751,898
1873	4,165,290			

Thus showing excess of expenditure in the two years of \$2,710,650
 And increase of assets in the same time of 1,110,929

Progress of the United States Branch: Net Fire Premiums: 1848, \$4,519; 1858, \$471,998; 1868, \$1,739,620; 1878, \$2,422,126; 1888, \$3,928,010; 1898, \$4,979,422; 1908, \$7,427,617.63.

LOSSES.—The amount paid in the satisfaction of fire losses in the United States to the beginning of the present year was over \$119,461,623.72. This large sum, in conjunction with the growth of the company's business, evinces the confidence of the public and the faithfulness with which the Company's losses are adjusted and settled.

The Casualty at the New Grand Central

LOSS of life and wreck of property over a wide area on Monday in Fiftieth Street, at Lexington Avenue, by an explosion of Pintsch gas, caused by a short circuited wire in contact with a main broken by a train breaking the track-end bumpers, the destructive force being such that a trolley car, rods away, was wrecked, supplies a vivid demonstration concerning the extent and seriousness of personal liability risks from casualties and of the explosion hazard in congested communities.

In regard to the personal accident hazard, as exemplified in the Grand Central explosion, E. E. Clapp & Co. said yesterday:

"This explosion, apart from the human feelings of horror and sympathy which such a disaster naturally arouses, points a great lesson. We Americans are a hustling nation. We have a greater proportion of accidents than any other civilized people. The suddenness and unexpectedness of this accident have struck every one. Who could have imagined that under presumably careful conditions of structure and operation of one of the

greatest railway terminals in the greatest city of America, such a disaster could occur? The mere chance that the sand-box on a train was empty, that the brakes would not hold the wheels on the slippery rails, and that the car crashed into a structure and broke a few pipes, was the original exciting cause of the entire calamity, brought on by the accidental ignition of the highly carbonized gas let out under a pressure of 150 pounds into the wrecked building. People for blocks around suffered injuries. Persons who may not have been aware that there was a railway station in their vicinity, were thrown down by the shock. Many were injured.

"Persons traveling peaceably on a trolley car were unprotected against the explosion. Several were killed instantly. Others suffered injuries which it is known will be fatal. Several are still missing, and their bodies may be found among the ruins, in which men are now digging.

"Even this serious accident is nothing compared to the great one which may occur in New York or any other large city of America at any moment.

Our people have rather been fortunate in escaping serious consequences of such accidents as these that have occurred. The collapse of the Hotel Darlington did not cause many deaths, but an explosion, such as this New York Central one, occurring in or near any large office building, or other heavily tenanted structure, would be a calamity that New York and the civilized world would remember for generations.

"No sensible man can fail to deduce two morals from this Grand Central explosion; first, that the American people must set to work to reduce the undue and excessive hazards known to exist in this country; and second, that no man is safe unprotected by an adequate amount of accident insurance to cover his own loss if he is disabled by one of these accidents, or the loss to his family if he is killed by it. In addition to these unusual casualties, there are daily occurring all over the United States thousands of accidents, it being estimated that more than 30,000 a day are injured in the United States alone, and that one fatal accident occurs every nine minutes."

Working of the British Compensation Act

IN THE Presidential address before the Institute of Actuaries, held in Holborn last month, the President said:

"Even when the basis of the actuary's deductions and forecasts seems soundest, his experience of the need of caution in dealing with figures will teach him to verify and retest it. Let me cite a case in point. When the Workmen's Compensation Act (1906) was passed, rates of premium were fixed upon the observations of previous accidents, an apparently safe procedure, given a large enough body of data. But these rates were soon

seen to be insufficient, owing to a triple cause. In the first place it was found that the protection afforded by the act to the worker, the cost of which fell on the employer, was often regarded by the latter as a relief of his personal obligation to use every endeavor possible to prevent the occurrence of accident. Sometimes the cost of the new burden was met in a measure by reducing supervision in factories and workshops, with the result that more mishaps occurred. Next, the worker himself feeling secured by statute against the consequence of his own act had a tendency

to slacken in the care with which he performed dangerous duties. Thirdly, the ever widening construction put upon the term 'accident' by our courts of law brought many new occurrences within the definition and enlarged the field of observation. It thus happened that past experience proved utterly untrustworthy as a guide to future results under the act, and the moral we must draw is that we should be slow to accept any basis for our estimates without the most careful consideration as to the continuance of those conditions on which it has been framed."

OBITUARY

Dr. Frederick W. Chapin.

Dr. Frederick W. Chapin, senior medical director of the Massachusetts Mutual Life Insurance Company, died of angina pectoris on December 15 at Springfield, Mass., having occupied his desk in the medical director's office the day before. For some time he had been aware of an affection of the heart, which might at any time suddenly stop its beating, so that, sudden as was his passing away, it had been preceded by months of apprehension.

Dr. Chapin was born in Middletown, Conn., November 17, 1849, and he removed to Springfield in 1854. He was fitted for college at Phillips Exeter Academy, and, entering Harvard, graduated there in 1870. He studied medicine with Dr. Willard Parker, of New York, and at the College of Physicians and Surgeons in this city, and was for two years a member of the house staff of Bellevue Hospital. He returned to Springfield and began practice in 1875.

He was appointed medical director of the Massachusetts Mutual in 1885, after having served several years as assistant medical director. In 1902 he was elected a director of the company. He was a trustee of Springfield Hospital, of the State Hospital at Northampton, Mass., and of the Weston Maternity Hospital in Springfield.

An open mind, judicial discrimination, tact and an ever-present courtesy characterized his relations with the agents and the medical examiners of his company, and his fine personality made of him a favorite associate of his fellow-officials and employees. For more than a generation he ably served his company and continuously enjoyed the high regard of its officers, agents and medical examiners. His departure brings sorrow to the Massachusetts Mutual and to his community.

AN ACCEPTABLE AND INEXPENSIVE GIFT

For Wife and Children is a policy of life insurance. Inexpensive—because money paid for a life insurance premium is not an **expense**, but a wise **investment**; acceptable, because it is of lasting value and its proceeds will buy bread and butter when you are gone. No! You think you will not be the one to die this year, but are you sure? A \$30 premium paid now may mean \$1,000 insurance before nightfall. Every one nowadays realizes that life insurance is indispensable.

The Life Presidents

IN THIS issue is continued the publication of the addresses delivered at the meeting in Chicago of the Association of Life Insurance Presidents. Summaries appear this week of the address of welcome by Superintendent Fred W. Potter, of the Illinois department; the reply by Vice-President Craig, of the Volunteer State Life of Chattanooga, Tenn.; that on "Life Insurance Instruction in Colleges," by Robert Lynn Cox, general counsel of the association, and on "Life Insurance as a Life Work" by Edward A. Woods, district manager at Pittsburg of the Equitable Life. The demands on the limited space available obliged the omission of much that was useful from Health Officer Doty's address on "Modern Sanitation;" from that of Dr. Wilbur, chief statistician of the

Census Bureau, on "The Census in Vital Statistics;" of Dr. Porter, the New York State Health Commissioner, on "Preventable Diseases;" Professor Adams on "Insurance Taxation Reform;" and "Vocational Training," by President Edmund J. James, of the University of Chicago.

Mrs. L. C. Rawson, Vice-President of the Des Moines Life Insurance Company, Des Moines, Ia., spoke on "Opportunity for Women in the Life Insurance Business." Mrs. Florence E. Shaal, of Boston, manager of the woman's department of the Equitable Life Assurance Society, read a paper entitled "Pathways of Success," in which she said the annual business written by her department for several years has been larger than the whole annual business in Massachusetts of ten life companies, not small ones.

LIFE INSURANCE A LIFE WORK

By Edward A. Woods,

Pittsburg District Manager, Equitable Life.

TO FURNISH the proper background for discussing the opportunities of life insurance as a life work for college men it seems almost necessary to refer to the magnitude of the field. American companies and associations have in force over 36,500,000 policies and certificates for over \$25,000,000,000 (\$25,175,797,538). This amount is equal to about 20 per cent of the total wealth of the United States; exceeds the total wealth of every other country in the world except Great Britain, France, Germany and Russia, and equals the combined total wealth of Belgium, Spain, the Netherlands, Portugal and Switzerland. Of the \$1,307,975,729 annually paid for insurance of all kinds, two-thirds, or \$884,068,753, is paid to the life insurance companies and associations—one of the largest items of expenditure of the American people—one-fifteenth of our total disbursements.

Its growth has been as rapid as it has been great. Practically its entire development has taken place in the last fifty years. The policies in force January 1, 1860, were but 49,608 for \$141,497,977. It has doubled more than three times as fast as the population of the country and more than twice as fast as its wealth.

There is no evidence of any abatement in its growth, nor is it conceivable that so long as life is uncertain and valuable, and men have families they love and businesses to protect and old age for which to save, it can ever be superseded by any other device. So long, therefore, as Americans are paying to-day nearly half the amount for candy that they pay for regular life insurance—excluding assessment

and fraternal, \$748,027,892—more for beer, nearly three times as much for liquor, three-fifths as much for tobacco, and two-thirds as much for automobiles, it can hardly be claimed that even with our present wealth and population life insurance has reached the limit of its growth. Even when this is reached a large business can still be expected because of the constant changes in population, replacing the dead by the living and the old by those becoming of age, and the constant growth of prosperity.

Life insurance, as other professions, should be taken up as a life and never as a temporary work. In trade men may turn, often advantageously, from selling one thing to another, or from one position to another, but the professional man devotes his lifetime to that vocation for which he acquires training by years of preparation not justified by temporary business. In the past men late in life and as a temporary expedient have taken up life insurance, and some have greatly succeeded, but it can best be followed by the young man, training himself for it and content to go slowly at first, but surely and more profitably as he becomes older and builds up the same clientage that the physician or lawyer does, and that cannot be done by one temporarily in it. We have considered the similarity between life insurance and the great professions to show that from its size, as well as nature, it requires talents that the trained college men should possess beyond those without such advantage. But there are other distinctions in a business well called "the best paid hard work in the world." It is not mere salesmanship of a concrete arti-

cle that can be seen and handled, like coal, realty, food, clothing or general merchandise. It peculiarly requires, as the previous definition states, an attainment in special knowledge and the application of such knowledge to the uses of others. A life insurance policy cannot be fitted, like a procrustean bed, to any client. Not only must he be urged to act, but advice must be given with integrity, judgment and wide knowledge and experience, not only of insurance but of general business. The man's circumstances, the condition of his business, the size and needs of his family, as well as how these can best be supplied by a particular insurance contract, must be thoroughly understood and honestly and urgently presented. Not only may a form of policy best suited to one man be entirely unsuited to another, but different policies are required by the same man for different purposes, at different times of his life and in different conditions of his affairs. Indeed, there are special fields of life insurance that are developing specialists, such as providing fixed incomes for wives and children, particularly daughters, payable during their lives in monthly, quarterly, semi-annual or annual instalments and safeguarded in various ways for the beneficiaries; corporation insurance, to protect corporations against the death of valuable members and for acquiring or retiring stock or interest of deceased partners—in itself a wide, lucrative and promising branch of insurance just opening and requiring an intimate knowledge not only of general business and business law, but the same study of each particular case as the lawyer would give

to it; insurance to provide pensions for employes and to provide for their families, much better done by voluntary insurance in America than by the expensive and compulsory governmental methods being experimented with elsewhere.

As with other professions, the young man, and still more the young woman, should clearly understand that they are handicapped by youth. Most insurance is secured by, and most easily sold to, those of mature years with families, and such are not so strongly influenced by the advice of a young man as one older and more experienced. On the other hand, insurance offers the very great advantage that age and experience greatly increase his prosperity instead of making his hold upon the business more precarious. The dead line is a subject to which the average young man gives little attention, but he is wise who considers the duration of his employment in advance instead of waiting until too late and perhaps having to face it when thrown out of employment at an age when he cannot get other employment.

The gray hairs and long experience of an insurance man are valuable. My father, for fifty years a teacher and college president, entered life insurance when sixty-eight, and was more successful than in any year of teaching. Nothing but failing health should prevent an insurance man well up in years from becoming increasingly efficient. One of the best insurance men I ever knew at the age of seventy-six made a record never equalled before or since, and was very successful after eighty, until stricken by paralysis.

theless, must swear that they have enforced the law. I am not deeply interested, I confess, in John Smith's petty complaint that William Brown has escaped his fair share of the common burden. But I am profoundly interested in democracy's failure efficiently to perform the most fundamental task of government. I firmly believe that if we fail to govern ourselves efficiently we must in the end cease to govern ourselves at all. I cannot view without apprehension, therefore, the spectacle which American taxation now presents.

Insurance experts get up before public assemblies or before legislative committees and expound their grievances so clearly that the very stones might well be convinced. Then they go their way and wonder why the results are not secured. The reason, gentlemen, is simple. Before they made their plea the railroads had exposed the injustice of railroad taxation, the bankers had exposed the injustice of bank taxation, farmers had been there with a similar and a similarly convincing plea, owners of real estate, owners of personal property, trustees representing the property of widows and orphans, a hundred other classes and interests had had their day in court, had talked for themselves or their clients and failed to secure redress. Your arguments fall on ears which are not congenitally deaf, but which have been deafened by unceasing complaint from all quarters. The general system is so bad that every story of injustice which you cite is capped on the instant by a more grievous example. You appeal to the average citizen to listen to your grievances, and when you finish his silent comment is simply this: "To reduce the taxes of the insurance companies is to increase the taxes of every other class in the community. Now, I know of a dozen of classes or interests who are in worse plight than the insurance companies. I will not aid you." And he gives the same answer to every other special plea. I am not a revolutionist. On the contrary, I am a particularly stubborn adherent of piecemeal progress in almost every other public question, including the tariff.

There is another and peculiarly significant reason why the reform of insurance taxation is inseparably bound up with general tax reform. Insurance companies ask for a reduction of the tax burdens not to relieve the management, but in order that the cost of insurance may be reduced, and the beneficent work of insurance extended. Their request for reduction is a tacit promise that premiums will be reduced—or, in participating premiums, that dividends will be correspondingly increased. But it is perfectly obvious that if the tax reduction is to accomplish this end it must be not sporadic, but general—not temporary, but continuous—not the result of a sudden spasm of generosity, but

INSURANCE TAXATION REFORM

By Thomas Sewall Adams, Ph. D.,

Washington University, St. Louis.

THE systematic discussion of insurance taxation carried on by this and similar associations has borne considerable fruit. In the narrow limits of my own personal acquaintanceship I know of several who have been converted to the belief that insurance taxation is now excessive, and of others—previously arrayed against you on this point—whose opposition has been transformed if not into allegiance at least into agnosticism. Whereas, once they were sure the insurance companies ought to pay more, now they wonder whether they are not paying too much.

But though much has been done, much remains to be done. The treatment of insurance companies in the recent Federal corporation income tax makes it very plain that the agnostics are not only in the majority but that they are still unconverted. It has seemed, therefore, that I could best be of service by rehearsing the points upon which the agnostics are still in

doubt and stating some of the reasons which prevent them from joining in the demand for tax reduction.

Let us assume in the beginning that insurance taxation is gravely in need of reform. I feel safe in doing this because insurance experts are so unanimous on the point—and because—here I know I am safe—there is practically no department of State taxation which is not seriously in need of reform. This is to me no laughing matter. You know and I know, and every observant taxpayer knows, that our tax system is literally founded on under-assessment. Evasion and, in a strict construction of the law, perjury have come to be, not incidents, but inseparable accompaniments of American Commonwealth taxation. In our tax laws we take the trouble to be neither just nor consistent nor practicable, and we hand this botchwork over to be administered by men—we should do no better in their places—who cannot enforce the law, who will not enforce the law, and who, never-

the exhibition of a deliberate and settled conviction on the part of the public that in matters of taxation, reason and sanity and equity are to prevail. I have already stated my conviction that the insurance business is not likely to receive fair and thoughtful treatment, while unfairness and thoughtlessness is the general rule. I add to that the expression of my further belief that the ability of the insurance companies to redeem their implied promises in this connection depends upon the assurance of a continuous and settled policy of fair dealing. This assurance will never be felt while there are a score of other interests and classes suffering from equally inequitable burdens.

The second reason why the campaign for the reduction of insurance taxes has not borne greater fruit is found in the fact that the great mass of people do not believe that the premium taxes paid by insurance companies are borne entirely by the policyholders of the companies.

In the agnostic's mind the problem really simmers down to these questions: (a) What rate of taxation does the average policyholder really pay on his insurance property—assuming that he pays the taxes; and (b) What rate does the average taxpayer actually pay on similar property?

First of all, it must be said that we have very little definite information upon the points—at least so far as the agnostic knows. And he respectfully suggests that the insurance companies could make few contributions to the solution of this problem more helpful than the publication of careful computations showing for representative types of policyholders: (a) The value of their claims or property rights in the insurance companies; (b) the amount of annual taxes imputed to them; (c) the ratio of these taxes to their corresponding claims on property rights (the rate of taxation), and (d) the ratio of these taxes to the annual premium payments. On the other hand, the State governments could do few things more beneficial than to ascertain accurately just what

rate of taxation the average individual is actually paying—not supposed to pay—on claims, credits and securities.

According to my rough calculations, however, the average policyholder—assuming that he pays the taxes—is paying on his insurance property the equivalent of an ad valorem tax of approximately three-tenths of one per cent, leaving out of account both the real estate held by the insurance companies and the taxes on that real estate and regarding fees as taxes. If we exclude fees the tax appears to be about two-tenths of one per cent. Whether this rate is higher or lower than that actually paid in analogous property is hard to say.

It would be a comparatively easy question, I believe, for either the State government or the insurance companies to secure an answer by the expenditure of a few thousand dollars. But speaking for myself and not for the agnostics, I am perfectly willing to say that in my opinion three-tenths

of one per cent, low as it appears, is probably four or five times as much as the average citizen pays on analogous securities.

In the end, like the muddled orator whom Speaker Cannon once rebuked, I "come out of the same hole I went in at." The insurance companies can do most by joining whole-heartedly in the campaign for a general clean-up of taxation. For it will not be the special pleaders who will deserve most in the coming years, but those who come with clean hands into the great court of public opinion and generously ask not that their own wrongs be remedied, but that a great stain upon democratic government be removed, whose most eloquent pleading is not for a reduction of their own scores but for a new and just reckoning of all obligation, anxious first of all that democracy shall cast the scales from her eyes, confident that when she sees she will grant them individually all they hope for or wish—simple justice.

WELCOME TO ILLINOIS

By Fred W. Potter,

State Superintendent, Illinois Insurance Department.

IN THE absence of Governor Deneen, who is away from the State because of a previous engagement, it is my pleasure in his behalf to bid you welcome to this city and State. In welcoming you to Chicago I do so in behalf of the second city in the United States, in the firm belief that the coming years will find her the metropolis, not only of the West, but of the whole Western Hemisphere. The companies composing your association are all represented here, and the volume of business done by them is constantly increasing. In all seventy-eight regular life companies are licensed to do business in Illinois, more perhaps than in any other State of the Union, and necessarily all have agencies in Chicago. In 1909 applications for policies calling for the payment of \$200,000,000 by the life companies were written in Illinois, while they collected \$36,000,000 in premiums on the total business in force. About one-half of this business was written in Chicago, and I feel that I ought to say here that the State's Attorney of Cook County is of the opinion that all the premiums on the first year's business should be collected. In view of these figures, I am not at all surprised that your association selected Illinois as the State in which to meet this year, as I realize that you would be glad to visit a field capable of producing such a volume of business as this, with an abiding hope that the figures given would be more than duplicated in the succeeding years.

I welcome you to Illinois, the only State in the West which does not impose upon her citizens a burden in the form of a tax upon the premiums or reserves of domestic companies; to

Illinois, which says to other States, "I will not tax your companies if you remove your burdens from mine"; to a Commonwealth which believes that the management of a company, and not the State, is better qualified to determine how much business it should yearly place on its books, how much should be paid to secure that business, how much surplus it should accumulate, and where its funds should be invested; to a State whose valuation laws do not compel companies to withdraw from her borders.

I bid you welcome in behalf of the

great West, of which this city is the metropolis. Statistics of your business show that the major portion of it comes from this vast region, whose people evidently believe in you, and in the companies you represent, and in the name of these untold millions I greet you.

At the same time I ask you, as a supervising official, to advocate and indorse and to help enact into law in all the States of the Union such

measures as will be helpful to the policyholders you and I both represent; and I wish to go on record as saying that so far as the State of Illinois is concerned, while some of the companies of your association have opposed vicious measures, as they should have done, I have found them assisting the department in the passage of helpful laws, and in behalf of myself and other supervising officials I bespeak your further co-operation.

REPLY TO SUPERINTENDENT POTTER

By E. B. Craig,

Vice-President, Volunteer State Life of Chattanooga.

THE fact that the honor of responding to the cordial words of welcome of the distinguished gentlemen comes to the youngest company in the association is a striking evidence of the good will and comradeship of the older and larger companies toward the younger companies, which by their manner of organization and methods of doing business have shown high ideals and a firm purpose not to deviate from conservative lines. Further, it is an evidence of the fact that this association had its birth in a conviction existing in the minds of men at the head of the largest and strongest institutions in our country that the life insurance business and the interest of the insured could best be conserved in matters affecting the general welfare of the business by the united efforts of all companies. Life insurance is a part of the very warp and woof of modern life, and is the foundation rock upon which rests the hope of the heads of families for those dependent upon them. In this fact this association recognizes a sacred trust, and in its efforts to create a condition that will enable us to better fulfill it, no individual company, large or small, old or young, is considered, but rather does it seek to deal with correct principles, to the end that those in authority may join us in producing laws and conditions that will be just to the insured and to all companies alike.

It is a source of very great gratification to have here, as we did in Washington last year, gentlemen in authority, heads of departments to whom we are responsible, express themselves so earnestly in favor of uniform laws to govern our business. I think we all fully realize the many difficulties confronting us in obtaining this uniformity. The President has told us that the Supreme Court has settled it, in so far as Congress is concerned, and that our only recourse is in securing common action by the different States. He also warned us that we had a tedious task, because of the conditions that surround the legislators of the different States. A long time ago, just about the time life insurance really started in the United States, a great man of this State, one of the great men of the world, through love for his country, made a statement, and the sound of his voice and the truth of his words still echo in the hills and valleys of every State in the Union—"A house divided against itself will not stand." The two great pillars supporting life protection are the company and the policyholder. Together let them ask for reasonable and just laws; not for laws to protect or foster one company or an especial group of companies, but for just laws to foster and protect the principles of life insurance. When this is done my faith is strong in the belief that many of the conflicting and disturbing elements in the business will disappear.

PREVENTABLE DISEASES

By Dr. Eugene H. Porter,

New York State Health Commissioner.

THERE are certain coming events in medicine which are casting their shadows before. Medicine has been up to the last 100 years a howling waste of wilderness. Its paths ran no whither and its cleared spaces were but scenes of desolation.

But now we have a new foundation and a new knowledge, and we are beginning to realize that we are living in the midst of a great remaking of medical history. The search for the cure for disease is giving way to the discovery of the cause of disease. The

knowledge of the cause leads to an understanding of prevention, and of the coming events in medicine that cast their shadows before the most numerous and most potent are those of prevention, and their sphere is the welfare alike of the individual and the community. And so we are changing from means to cure to search for cause. To cure is splendid, but to prevent is Godlike. The last fifty years have seen more progress made in knowledge of the causes of disease than all the centuries before.

In this fight against preventable diseases the first thing is to find out as nearly as may be the facts in the case. What is our present position? How does it compare with the past? What may we reasonably expect in the near future? What are the figures in the health accounts and what are the lessons taught by them?

Our system of vital statistics is not yet perfected, is not always complete, sometimes is necessarily lacking in accuracy, and the summaries presented are therefore too susceptible to widely varying interpretations. But in the last few years a remarkable advance has been made, and the conclusions reached may be safely accepted. We all know now that the death rate varies as hygienic conditions vary. We are certain that the average duration of life in Europe has nearly doubled in the last four centuries. We believe that the increase in the length of life is still going on. Statistics seem to show that in the nineteenth century it lengthened at the rate of about twelve years, and evidence is accumulating which points to a much greater increase during the years to come. India alone shows no rate of improvement.

The statistics to which I desire now to direct your attention are those of the registration area of the United States. They have been brought down to the end of the year 1909 and are fairly accurate.

The registration area of the United States now includes eighteen States, and the aggregate estimated population of the registration area for the year 1909 is 48,776,893, or 55.3 per cent of the total estimated population of Continental United States.

The total number of reported deaths in the registration area for the year 1909 was 732,538, an increase of 40,694 over 1908.

The death rate, based upon the United States Census Bureau's estimated population, was 15.0 per 1,000, which is the lowest that has ever occurred in the history of the United States.

The age distribution shows a slightly lower proportion of deaths of children under five years of age for 1909 (26.8 per cent) than for the preceding year (27.5 per cent). This is due to a somewhat lower ratio of death of infants under one year of age.

Deaths from general diseases increased from 186,264 in 1908 to 192,788 in 1909 (6,524, or 3.5 per cent). The death rate per 100,000 population from general diseases decreased from 413.7 for 1908 to 395.2 for 1909. The United States Census Bureau states that the rate for the latter year is the lowest of any year since the establishment of the bureau in 1900, and probably the lowest of any previous year in the history of the country.

While typhoid fever, measles, scarlet fever, diphtheria and croup, and nearly all of the infectious diseases belonging to this group showed decreased death rates for 1909, the chief

numerical decrease in the deaths was due to the decrease in the number of deaths from influenza, which fell from 9,989 for 1908 to 6,649 for 1909.

Deaths from diseases of the nervous system increased from 71,090 for 1908 to 74,656 for 1909—3,566, or 5 per cent, being slightly less than the average for all causes. The death rate fell from 157.9 to 153.1 per 100,000 population. The increase in the number of deaths for this class of diseases was due chiefly to apoplexy.

Deaths from diseases of the circulatory system increased largely from 80,607 in 1908 to 90,456 in 1909, an increase of 9,849, or 12.2 per cent, and the death rate increased from 179 in 1908 to 185.4 in 1909.

The greater part of the numerical increase of this class was due to deaths from organic heart disease—5,933, or 9.9 per cent—although the proportional increase for deaths from endocarditis (912, or 15.2 per cent), and diseases of the arteries (2,239, or 28.2 per cent) is greater.

Diseases of the respiratory system showed about the same increase in the number of deaths as diseases of the circulatory system for 1909, as compared with 1908.

The death rate increased from 181.6 to 186.3 per 100,000 population.

The increase in deaths from diseases in this class was due largely to pneumonia, which caused 61,259 deaths, or 136 per 100,000 population in 1908 and 70,033 deaths in 1909, or 143.6 per 100,000 population.

Deaths from diseases of the genito-urinary system increased from 51,717 for 1908 to 57,070 in 1909 (or 10 per cent). The death rate increased from 114.9 for 1908 to 117 in 1909. Bright's disease constitutes the chief cause of death in this class, and is the only one that showed a notable increase in the number of deaths.

The total number of deaths by typhoid fever in the registration area for the year 1909 was 10,722, a decrease of 653 from the number (11,375) recorded for 1908 for a somewhat smaller registration area. The death rate fell from 25.3 per 100,000 population to 22.0. The typhoid fever death rate in New York State during 1908 was 16.0 and in 1909 15.0, the lowest ever recorded in the State.

The death rate from diphtheria decreased from 22.3 in 1908 to 21.2 in 1909.

The total number of cases of tuberculosis of all forms registered in 1909 was 81,720, which exceeded by 3,431 the number reported in 1908. However, the death rate decreased from 173.9 to 167.5. The latter is the lowest rate on record for the registration area. About 14,000 deaths occur annually in New York State.

Cancer showed a much greater proportional increase in the number of deaths than tuberculosis, rising from 33,465 in 1908 to 37,562 in 1909, and the death rate increasing from 74.3 to 77, the latter being the highest ever recorded for the registration area of the United States. A marked increase in the deaths from cancer is shown for all the main subdivisions of the registration area. In New York State there were recorded 7,034 deaths in 1909. The average yearly deaths for twenty-five years has been 4,227.

Pneumonia, in the aggregate, caused more deaths in the registration area than any other disease except tuberculosis. The number of deaths increased from 61,259 in 1908 to 70,033 in 1909—the latter being only seven less than the number of deaths from tuberculosis of the lungs—70,040. The death rate from all forms of pneumonia increased from 136 per 100,000 population in 1908 to 143.6 in

1909.

External causes other than suicide were responsible for 47,135 deaths in the registration area in 1909, as against 44,089 in 1908. The death rate declined from 97.9 to 96.7 per 100,000 population.

Among the causes of accidental deaths were the following, in order of numerical importance:

Railroad accidents and injuries, 6,659; drowning, 4,558; burns and scalds, 3,992; injuries at birth, 3,508; injuries by horses and vehicles, 2,152; by street cars, 1,723; automobile accidents, 632; injuries in mines and quarries, 1,997; inhalation of poisoning gases, including conflagration, 1,837; accidental poisonings, 1,779; accidental gunshot wounds, 944; heat and sunstroke, 816; cold and freezing, 251; lightning, 150. There were 1,174 fatal injuries by machinery, chiefly in factories.

The decrease in the mortality rate from typhoid fever and tuberculosis can hardly be said to be satisfactory. Although the typhoid rate fell from 25 to 22 in 1909, during the years 1905 to 1908 there was an increased urban death rate as compared to the years 1900 to 1904. The returns for tuberculosis should be much better during the next five years if the work so bravely and enthusiastically begun is steadily continued. The death rate of pneumonia seems to be steadily increasing; its ravages approach those of tuberculosis. Heart disease, cancer, diseases of early infancy, Bright's disease and nephritis all show increase, nor is the decrease in the mortality rate of scarlet fever, measles and some other infectious diseases of a strikingly marked character.

From this rapid survey of the present situation it would appear that the skirmish lines of the opposing forces

have come together and we have discovered the enemy, in force strongly entrenched, in our front.

Allow me to recall to your memories the typhoid epidemics of Plymouth, New Haven, Ithaca, Scranton, Lowell and Lawrence, Pittsburg, Chicago, Cleveland, Newport, Trenton, our military camps and Butler.

What was the cost of those epidemics, all of which should and could have been prevented? Of the 35,379 deaths in 1900, three-fourths at least could have been prevented. While typhoid is a water borne disease, it does not all come from water. Yet it is instructive to see what a good water supply will do. Lowell, Mass., before filtration, had a death rate from typhoid of 121 per 100,000; after filtration, 26. Albany, N. Y., before filtration, 104; after, 24. Binghamton, N. Y., before filtration, 49; after, 11. Watertown, N. Y., before filtration, 68; after, 19.5. We are doing better than that now.

It is evident that the weakest spots in the enemy's line are the mortality rates of tuberculosis, typhoid fever, scarlet fever, measles and diphtheria. There are three strongly entrenched positions that must be moved upon and overthrown—pneumonia, Bright's disease and cancer. In a somewhat isolated position stands the fort—Deaths by Violence. We must storm it.

We have begun a vigorous campaign against tuberculosis and the results are beginning to show. An effective campaign against typhoid would show quicker and more marked results. I have given the rate of typhoid in the registration area. But in the entire United States the average typhoid fever death rate for 1900 was 46.5 per 100,000. This means in the census year there were about 500 cases of and over 46 deaths from typhoid fever among every 100,000 persons in our nation. The total number of deaths that year was 35,379, and typhoid fever stood fourth on the mortality list. The typhoid fever rate in Scotland, 1901-1905, was 6.2; in Germany, 7.6; in England, 11.2; in Austria, 19.9; in the United States, 46 (estimated).

It is with great trepidation that I venture to suggest to this great national association, made up of such important component parts, what it might do in this great health work, and why it ought to do it.

Why should you engage in an effort to prolong life?

First—Because there is nothing to prevent you. No reasonable argument may be brought against a sane and well-considered effort on your part to prolong life and so legitimately increase your income and so strengthen your position as trustees of the funds of the people. Nor can any law be invoked against such action. Generally speaking, in the insurance world a lessened death rate and an increased income go hand in hand.

Second—Because you already possess a most efficient and highly trained body of workers. You have now approximately 80,000 medical examiners and 20,000 agents in the field. Through this great corps of active workers you are able to constantly maintain a close and most sensitive relationship with the 20,000,000 of policyholders represented by the various companies. This relationship of the policyholder to his life insurance company is within definable limits a peculiarly intimate one. By reason of this relationship you are able, whenever you see fit to use your power, to exercise a tremendous influence over more than one-half of this nation. What you say to them on health matters, what you advise regarding the prolongation of life, will be attentively received and seriously weighed. I know of no one single agency in all the wide field of sanitary effort so potentially powerful for public health as your own organization.

To the insurance companies the appeal of this enlarged field of usefulness must come with peculiar force. To enter upon public health work is to discharge one of those higher duties which the people are now expecting from all our great organizations. To engage in it is not only to do the thing that is next, but it secures for generations to come the good will and sympathetic understanding of the millions of policyholders and their friends.

It is not easy to say what the lines of activity shall be, but it ought not to be difficult to make an initial selection. With your kind permission I

will suggest the following things, most of which seem to be next to you:

The instruction of medical examiners and life insurance agents in sanitation and preventive disease work.

The issuance of a carefully arranged series of letters or circulars on health topics to policyholders.

The establishment of a health magazine or health bulletin.

The arranging for a series of public health lectures in various cities and towns with or without the co-operation of State or local authorities. Some of these lectures to be published.

To use all the time systematically the tremendous educational power of the press.

Conjoint work with State and city health departments.

Conjoint work with all organizations interested in public health work.

The securing of more uniform and better health laws.

The establishment of a national Department of Health.

To aid in securing adequate appropriations for health work.

The free re-examination of all policyholders. This opens a tremendous field of work.

A special investigation of the causes of pneumonia, Bright's disease, diabetes, apoplexy and cancer.

Making available, as Dr. Dwight has suggested, that great storehouse of experiences now in your possession. It is a gigantic collection of facts and should be of incalculable value.

Educate! Educate! And again, Educate!

VOCATIONAL TRAINING

By Edmund J. James,

The University of Chicago.

DR. EDMUND J. JAMES, of the University of Chicago, in an address on "Vocational Training and Its Future," said:

"American education has undergone a profound transformation within the last forty years. The Harvard University of to-day is as different an institution from the Harvard University of 1870, and in many ways as great an improvement upon that institution as the engine which drags the twentieth century express between New York and Chicago is different from and an improvement upon its counterpart of forty years ago. Harvard University has undergone perhaps a more complete revolution and change than any of the older historic institutions, but a similar change is to be found in all the newer institutions from Maine to California, and Washington to Florida. An entirely new atmosphere, an entirely new spirit and an entirely new outlook distinguish the institutions of to-day from those of forty years ago. The attendance has increased enormously and has

outrun the increase in population. The amount of money spent is increasing enormously. The great change in our system of higher education which marks it off to-day in such a clear way from what it was before 1870 may be traced directly and immediately to the increased emphasis laid upon vocational training. The universities have, to an increasing extent, become the centres for the education of men who go into not only the historic learned professions, but into the never learned professions and into callings which we have not yet accustomed ourselves to look upon as learned professions. The great increase in attendance at our universities has come primarily into those departments which have to do directly or indirectly with vocational training, or into those departments which have given a vocational turn to the education which they were offering. That the victory of the well planned, well taught curriculum of the vocational school over the haphazard training of the office, the farm, the shop, is be-

NOTEWORTHY ADVANCE.

The BERKSHIRE LIFE Insurance Company,

OF PITTSFIELD, MASSACHUSETTS,

takes an advanced step in the interest of the policyholder by the adoption of the following liberal features in its new policy contract:

Low premium rates.

Large surrender values.

Dividends at the end of each policy year.

Thirty-one days of grace in payment of all premiums after the first year.

Paid-up insurance or cash surrender value or extended insurance after two years' premiums have been paid.

Loans for the full cash surrender value.

Policy payable in one sum or in installments for terms of years.

Policy has no restrictions upon residence or travel and is incontestable after the first policy year, except for non-payment of premiums.

Right of the insured to change the beneficiary.

Liberal re-instatement privileges.

Every effort has been made to make this new policy the very perfection in a life insurance contract.

Paid to Policyholders since Organization, plus the Amount now invested for their Security, \$537,223,523.83.
Number of Policies, 1 Force, December 31, 1909, \$10,621,679. Total Outstanding Insurance Placed and Paid for, December 31, 1909, \$2,041,951,700.00.

In its Ordinary Department policies are issued for from \$1,000 to \$1,000,000 on individual lives, premiums payable annually, semi-annually and quarterly. In its Industrial Department policies are issued on all the insurable members of the family for weekly premiums.

Full particulars regarding the plans of the Metropolitan may be obtained at its Home Office, 1 Madison Avenue, New York City, or its Agents in all the principal cities of the United States and Canada.

coming ever more certain, and that especially in all those departments of life in which the success of the profession, as a whole and in a large way, is dependent upon the development of certain underlying fundamental sciences, by training in which the young man may get some help and assistance in preparation for his actual life work.

"So much for a general view of the subject. Now, no one can face the educational situation in the United States to-day without feeling that, while this principle before referred to has been now generally accepted in certain fields of training, it has had little or no application in the great field of business, commerce and industry. It was about thirty years ago when President Eliot said that there was nothing in business which could be taught to young men in a college or university. He forgot that the craft by which a man earns his livelihood is also, generally speaking and usually speaking, the means by which he is doing whatever he can do to be of benefit to those of his age and generation.

"Within a comparatively few years nearly every leading university in the United States has provided to the extent of its ability for instruction along lines in which men who expect to go into business life would be especially interested, and now even Harvard has

swung into line with a department placed upon the same basis as law, medicine and engineering as a strictly professional school requiring for admission the same general preparation as for the other professional schools. And finally now, in the latest report for the reorganization of the University of Oxford, coming out under the name and with the approval of Lord Curzon, chancellor of the university, a definite recommendation is made that facilities for the study of these subjects looking forward to preparation for active business life inside of the university and as an integral part of its work are demanded as one of the important elements of university reform.

"The department of insurance is certainly one of the most important departments of business and social life in a great commonwealth like ours. The country is continually bamboozled by rotten insurance schemes, because at bottom the number of men in the community who understand insurance, who have any conception of the real problems underlying it, is very small. I believe for my part, gentlemen, that our universities ought to make far more ample provision for the scientific study of insurance in a large way, and I believe that you would find it to your advantage to encourage the development of this study in our great universities."

CENSUS IN VITAL STATISTICS

By Dr. Cressy L. Wilbur,

Chief Statistician, United States Census Bureau.

LIFE insurance is a commodity. Sanitation is likewise a commodity. It is even more necessary and important than life insurance, because, as "self-preservation is the first law of nature," we feel a stronger impulse to preserve our own lives and the lives of those dear to us than merely to compensate, in part, for unnecessary and untimely deaths. If we only knew just how to do this and could see clearly, and demonstrate to others, and more particularly to members of city councils, State legislatures, the Congress of the United States, and to all persons in power, just how, and to what extent, the adoption or thorough enforcement of approved sanitary measures would actually save human lives, beyond a peradventure or a doubt, in their homes, in their cities and States, and in our nation—then I say the cause of better sanitation would advance by leaps and bounds compared to which its marvellous progress in the past generation would seem like a one-horse cart compared with the latest type of airplane. This is the age of the "Conquest of the Air," and it is equally the age of the "Conquest of Disease." We know enough now to prevent all typhoid fever, and practically all tuberculosis, and very much

of the "cholera infantum" and other varieties of diarrhea and enteritis that slay their thousands and tens of thousands of infant lives in our country every Summer time; and we could absolutely prevent—or cure, if we may have faith in the latest statements in regard to "606"—those tabooed diseases which, regardless of our feelings of delicacy, fastidiously expressed in our campaign against the "Great Black Plague" of venereal diseases (syphilis and gonorrhea), annually kill and cripple just as many, and more, people than if we did not hesitate to pronounce their names. There are many other diseases that might be prevented or largely restricted, as well as the large number of deaths and disabilities that result from avoidable accidents. The first step is to know where, when and how many. This knowledge, which is absolutely necessary for modern scientific public health work, can only be obtained from accurate vital statistics. One of the first things accomplished by Japan, when that country adopted the progressive methods of the West, was the installation of a thorough system of registration of vital statistics—births, still births, deaths, marriages and divorces. Japan is now fifty years ahead of the United States in this respect, although this country has been

endeavoring to collect national vital statistics since the seventh census (1850), a period of over sixty years. Yet at the present moment we must confess, with what humiliation our understanding of the situation may entail, not only that we have no reliable statistics of infantile mortality for the United States, but that we do not possess even fairly accurate registration of deaths for much more than one-half of the total population (55.3 per cent), and that we have practically no complete registration of births for even a single State or a single city in the entire United States!

The value of sanitation, and the price that we can reasonably expend upon it, depends, more or less, as does life insurance, upon the risk of life. What would you think of a life insurance company that undertook to organize and conduct its business without a mortality table?

What do you think of State and city boards of health that undertake to organize and conduct their work, and do conduct it for many years, without reliable vital statistics? Are they not blindly working in the dark, when they are entitled to and might have abundance of light? Are they not wasting their time, to a considerable extent, the money of the State (or city), and the lives of the people committed to their care, when they work with imperfect or worthless tools and neglect the securing of reliable vital statistics as the "absolutely necessary basis of modern scientific public health work?" This is why I may properly place first and most important, and I trust that you will agree with me, of all the work done by the census in vital statistics, the work for the extension of the registration area and the adoption and thorough enforcement of good registration laws for births and deaths. We must lay our foundations square and strong, and not be too anxious to gain some temporary advantage or aid in our work by adopting or recommending principles that will prove disastrous in practice. One of these is compensation to physicians and midwives for reporting births, or even to physicians for reporting deaths. Another curse that rests heavy upon the progress of registration in the United States is the worthless county system, which attempts to collect or transmit registration returns of births and deaths through the agency of some county official.

Next to securing a good law and its effective enforcement comes the standardizing of registration returns and published data. The standardizing of the returns can most effectually be accomplished by the use of the United States standard certificate of death, and the corresponding certificate for births. The standard certificate for deaths was adopted in 1901, at a time when no two States and few cities in this country used identical forms for the initial schedule, upon which

the exact comparability of all subsequent data must depend. It will be supplemented by a Physician's Pocket Reference to the International List of Causes of Death, which is being sent to all physicians in the United States, so that they may use more precise terms for designating diseases and such as can be readily classified under the international system. The precise statement of occupation is of great importance because there is wide demand for exact statistics of occupational mortality, which cannot be met unless the returns of occupations of decedents upon causes of death can be compared with the corresponding returns of population. Beginning with 1910 and the use of the revised standard certificate and instructions, the statements of occupation (and industry) upon the returns of deaths and population are in the same form:

Occupation—(a) Trade, profession, or particular kind of work. (b) General nature of industry, business or establishment in which employed (or employer).

Heretofore all certificates of death in use in this country have contained only the single question "Occupation", without instructions or provision for statement of the particular kind of work and the industry. It was a decided step in advance to provide for a more specific statement, identical with that upon the population schedule; and it was wise not to complicate the subject further by asking for previous occupations, etc., until we shall succeed in carrying out the improved method of statement to a fair degree of success for the entire registration area.

It may be within the power of the Association of Life Insurance Presidents to hasten the time when we shall have thoroughly accurate and dependable vital statistics for the entire United States. With the vast resources committed to your care, and realizing the fact that life insurance, like sanitation, is crippled by the lack of vital statistics for a large part of this country, I believe that your aid will be most effective. To-day many parts of the South are misrepresented and discriminated against, as it believes, because no accurate vital statistics are available to show the actual conditions with respect to healthfulness. Companies fear to enter certain States, and higher rates are charged persons insuring. Knowledge is sought in many unusual ways to guide the action of life insurance interests, but all such methods are of little worth compared to the results of thorough registration of births and deaths. It is not for a selfish purpose that such efforts are made. General Counsel Cox informs me that of the twenty-five thousand millions (\$25,175,797,538) of dollars of life insurance now in force in the United States, nearly nine thousand millions (\$8,920,716,227) are in fraternal organizations, while of the fifteen thou-

sand millions (\$15,480,721,211) in legal reserve companies, a statement for the whole of which cannot be made, nearly eleven thousand millions (\$10,926,032,551), or 82 per cent of the thirteen thousand millions (\$13,396,373,821), for which the data were available was of the participating class. So the person insured, or the person who ought to be insured, has by far the greatest interest in knowing the exact conditions of mortality upon which his rates are or should be based. The vast yearly expenditure for life insurance, with its tremendous increase during the last thirty years, and the large expenditure for sanitation (although too little by far if the needs of sanitation were better known through accurate registration) alike demand accurate data on vital statistics, and the construction of suitable rates and life tables by which alone the actual condition of the health of the people can be known.

The Bureau of the Census is making every effort in its power to supply this demand, by aiding the extension of the registration area and standardizing the results available. It publishes annually a report and a bulle-

tin on mortality statistics, which is of direct use to sanitary officials, and contemplates the publication of special volumes as soon as the population data of the thirteenth census shall be in readiness upon the aggregate mortality of the last decade, with "corrected" death rates, a special report on occupational mortality, and a volume of life tables, the latter with the aid and advice of the Actuarial Society of America, which has appointed a special committee for this purpose. But more help is necessary, and all persons and organizations concerned with the welfare of the United States should interest themselves in the practical solution of the problem of how we may attain as a nation better vital statistics. In particular I hope that this association will exert its influence, and that every life insurance company, the president, the general officers and district representatives, the agents, and every policyholder, will feel that it is vital to him to have full information upon the vital statistics of the United States, his State and his city, and will urge the adoption and thorough enforcement of laws for this purpose.

MODERN SANITATION

By Alvah H. Doty.

Health Officer, Port of New York.

AS MODERN sanitation cannot properly be enforced without the active and earnest co-operation of the public, it is not only fair but exceedingly important that the latter should be familiar with the advances which have been made in this science and its purposes at the present period. Medical history even prior to the Christian era makes frequent references to the various methods which were in vogue at that time. It is of interest to know that through all ages cleanliness has been looked upon as a factor in the prevention of disease. This is specifically referred to in the Bible in connection with the Levitical laws. That cleanliness has stood the test of time is evident from the fact that to-day it forms an important part of the groundwork of modern sanitation.

While during the last century sanitary methods have steadily improved in value, it was not until about 1880 that sanitation was placed on a scientific basis and a new era in this important work was established. At this period Pasteur and Koch gave to the world the result of their bacteriological investigation, the value of which cannot be overestimated. They proved the germ origin of many of the infectious diseases and furnished a stimulus for further exhaustive bacteriological research in this direction.

The next important step in connection with this subject has been to determine the true means by which infectious diseases are transmitted from one person to another. So far as mat-

ters pertaining to the public health are concerned there is no belief which has been so generally accepted as the theory that infectious diseases are transmitted not only by the clothing and effects of the sick, but also by the clothing of those who are well, baggage, rags, cargoes of vessels, money, etc. In the past this has dominated all regulations, the object of which has been to prevent the transmission of infectious diseases. Inasmuch as this means of transmitting infection has been referred to in the earliest medical writings, it could not have been suggested by careful scientific investigation. It is known throughout the world as the fomites theory, and refers to various articles, which are supposed to transmit the germ of infectious diseases in their active state

Deferred Dividend Reserve...	148,581.00
Contingency Reserve (Surplus)	665,149.17

from one person to another. Curiously enough this theory is not supported by scientific proof. However, it is plausible and popular because it easily explains outbreaks, the origin of which are unknown. Practical sanitarians have slowly but surely secured indisputable evidence that it is fallacious and that infectious diseases are not transmitted by fomites except in very rare instances, but usually directly from one person to another, or by food and drink as in cholera and typhoid fever, and within the last few years we have obtained conclusive proof that insects constitute a potent factor in the transmission of infection. We are now also better acquainted with the fact that mild, irregular and unrecognized cases constitute one of the most common and dangerous factors in the transmission of infectious diseases and are responsible for many outbreaks the origin of which cannot be determined. Further than this, we have more recently learned that apparently well persons known as carriers may act as the medium of infection without presenting any evidence of the disease themselves. In modern times probably no diseases have caused greater loss of life than malaria and yellow fever, particularly the former, because it may be found in all parts of the world. No more impressive evidence of the erroneous theories which have hitherto been accepted relative to the transmission of infectious diseases can be presented than in the cases of the diseases to which I have just referred. To-day we know that malaria is not transmitted by emanations from swamps or lowlying districts, but by specific organisms, and that the only part that swamps play in the transmission of this disease is by furnishing breeding places for the mosquito. Furthermore, yellow fever is not transmitted by clothing, bedding or other effects of the patients, or even by their discharges, all of which are now known to be perfectly harmless, and that both malaria and yellow fever are transmitted only by certain varieties of the mosquito; in yellow fever it is the *stegomyia*, and in malaria the *anopheles*. Bubonic plague was also formerly believed to be transmitted by clothing, etc.; now we know that it is transmitted chiefly by infected rats through the medium of the fleas which infest them. Evidence has also been presented to show that fomites, except in some rare instances, takes no part in the transmission of other diseases. No belief has indirectly, at least, contributed more to the extension of infectious disease than the fomites theory, for it has been employed to explain outbreaks the origin of which cannot promptly be determined, and has given those in charge of public health work as well as others encouragement to assume that diseases enter a community on some one's clothing or effects. This to a certain extent relieves a health official of the important duty of mak-

ing an exhaustive inspection to find out the true origin of the outbreak—the most important duty of a public health officer.

There is a well marked element of hysteria on the part of the public relative to the matter of personal infection, and many things are done which to the practical sanitarian are not only illogical, but absurd, and the public should know it. For instance, there is a very urgent call for the disinfection of money. From the standpoint of public health there is no justification for such action, besides no more farcical or unreasonable thing could occur than an attempt to carry out this treatment, even if it were necessary. Steam only could be used for the purpose, because no other agent could penetrate a mass of paper money; besides, when and where would this be done, and who would do it? It is true that the money in circulation is filthy and offensive and should be frequently withdrawn from circulation and the new bills substituted, but let us secure this in the proper way and not on the grounds that it is a common medium of infection, for it is not. Some people very reluctantly make use of strap hangers in public conveyances for fear of infection. Those who are timid in regard to these matters should know that while these articles may contain many bacteria or germs, they are usually of a harmless character and are

not pathogenic organisms or those which transmit disease.

I may say a word in regard to the subject of disinfection, of which there is considerable misunderstanding on the part of the public. Knowledge of the true means by which infectious diseases are transmitted and the rejection of the fomites theory has reduced disinfection to within very narrow limits. This under ordinary conditions is now confined to the treatment of discharges and material in the sick apartment. Even here the disinfection of clothing is far less important than the destruction of the discharges of the patient, which in certain diseases is the chief if not the only source of infection. Contrary to the general opinion, disinfection should be performed only under the direction of the physician or health official in order to secure the proper results. We are all familiar with the household disinfection, where saucers of carbolic acid are placed under the bed, small pieces of sulphur are burned in the room, or some textile fabric soaked in a so-called disinfectant is hung in the apartment. As a matter of fact, these methods are absolutely worthless. Sulphur dioxide or formaldehyde gas produced in sufficient amounts to kill infectious organisms is not respirable in the human being; therefore, a patient could not remain in the apartment undergoing treatment.

LIFE INSTRUCTION IN COLLEGES

By Robert Lynn Cox,

General Counsel, Association of Life Insurance Presidents.

LIFE insurance in its incidental relationship to the general subject of economics has been considered and somewhat discussed in college courses for a great many years, but life insurance as a special and separate course seems to have originated with Harvard College in 1897. To-day it is a subject of one or more special courses in thirty-three colleges and universities, with a student body of 80,000. There has been an increase during the last five years of 154 per cent in the number of institutions offering such courses. Besides, there has been a wonderful development in the treatment of the subject in the various collegiate courses.

But this is not all. There is a group of 191 colleges and universities, with a student body of 95,000, which pays varying degrees of attention to the subject in connection with their regular courses in economics, sociology, etc. It is in this vast group, containing many of the representative universities of the country, that the expansion of the immediate future will probably take place. Several of the institutions in this classification are already planning for the establishment of separate courses in insurance instruction.

There is a third group treating life insurance made up of institutions that do not fall into the two former classifications noted. It numbers thirty-nine, with a student body of 17,000. Many of these colleges deal with the subject in commercial law. Others report incidental treatment without mentioning the course involved.

These three groups make a total of 263 institutions treating the subject of life insurance out of 588 colleges and universities in this country. In point of numbers we, therefore, find 45 per cent of the institutions of higher education dealing with the subject. However, these 263 institutions have a student body of 192,000 out of a total of 318,000, or 60 per cent. Therefore, life insurance to a greater or less extent is treated in institutions that have considerably more than half of the college student population in this country.

The pioneer life insurance instructor in institutions of higher learning was the late Charlton T. Lewis, of New York. It was he who presented at Harvard in 1897 what seems to have been the first definite instruction of this kind. The year after the lectures were given at Harvard Mr. Lewis printed them in syllabus form and delivered them at Cornell.

Insurance News in the West

CHICAGO, Dec. 21.—After a stormy interview with Second Vice-President John B. Morton, J. W. Robertson last Friday resigned as Western manager of the Fire Association. The department was placed in charge of Assistant Manager W. J. Haggarty, pending the announcement of the appointment of a manager, who is understood to have been selected already.

The action of Mr. Robertson was the snapping of relations which have been strained for some time. The Western department has not been very harmonious under his administration, and he intimates that his enemies have been undermining him with the company.

When John S. Belden, of the managerial firm of Belden & Bush, died in the Summer of 1908, Mr. Robertson was called in from the field and made a member of the firm of Bush & Robertson. A year later he became sole manager, Mr. Bush retiring. About the time that Mr. Robertson took sole charge new economies were introduced. It was understood on the Street that this was by order of the home office. Among other expense reductions was the cutting of some salaries in the accounting department. Not long afterward it was found that the books were badly muddled. Remittances by agents had been credited to other ones in some cases and good agents were being dunned for balances they had paid. It took a thorough accountant months to straighten out the books. During this period Mr. Robertson worked with him far into the night almost continuously. It has been Mr. Robertson's custom to return to the office after dinner. Being such a hard worker himself, he may have expected too much from others. From remarks made by ex-employees it was reasonable to assume that the Fire Association office was not regarded as an agreeable place in which to work. Apparently this discord finally got on the nerves of the home office people. Mr. Robertson began to feel that an attempt was being made to freeze him out. Finally the open rupture came.

Mr. Robertson is a Virginian by birth, was educated for the bar and practiced law for some time before going into insurance. He entered the field for the National of Hartford in 1882 and served that company, the London and Lancashire and the Fire Association successively up to the time of his appointment as manager of the Fire Association. His resignation was sudden and he has not yet formulated definite plans for the future.

* * *

The Illinois State Fire Prevention Association lapsed into "innoc-

uous desuetude" last week. It was born tired and has remained that way ever since, but it required formal action to make it quit gathering in the annual dues. The members did not want to kill it, they merely wanted it to go to sleep and stay asleep until it might be needed. Nobody knows what a legislative year may bring forth. The lawmakers may make the State Fire Marshal law effective. In that event the members think the association might be made useful. The Legislature might also enact a law which would put the State board and the field club out of business. In that event the Fire Prevention Association might come in handy. It will be waked when it is wanted.

* * *

Reinsurance of its Southern business by the Michigan Commercial and retirement from that territory adds another to the list of young Western companies which have found it advisable or necessary to contract after too much expansion. The Michigan Commercial is one of the best managed of the younger companies. It has experienced men at the home office and high-grade field men. But its surplus has been under

constant strain, owing to its putting on business rapidly and spreading out considerably. This reinsurance will help the surplus and probably have a beneficial effect on the expense ratio.

* * *

Last week the Dixie Fire secured judgment in Chicago for \$5,007 against its former general agent for Illinois and Indiana, L. S. MacEnaney. This was the amount of premiums the company claimed to be due it from Mr. MacEnaney and his agents when it reinsured all its business in his territory except Cook County. Mr. MacEnaney was one of those who thought money could be made out of a small general agency. His couple of years' experience cost him several thousand dollars more than he made. Two or three years ago there were several of these small general agencies, representing one or two companies for a few States, but most of them have disappeared. As a rule, the surviving general agencies represent a number of companies.

* * *

Starkweather & Shepley, United States managers of the Union and the Nationale of Paris, will plant these companies in the West on the same plan as the Rhode Island has been planted. It has not entered small towns, but has confined its attention to getting agents at points where there is considerable business to be

secured and at some of which additional insurance facilities are really needed.

* * *

After January 1, plate glass underwriters in Chicago will watch with interest the outcome of the transfer of Charles F. Pogge from the Metropolitan Casualty to the New Jersey Plate Glass. Mr. Pogge has been "on the Street" for about twenty-four years and is recognized as one of the best plate glass men in the city. During the long period of his connection with the Metropolitan Casualty, he built up for it a premium income of

nearly \$50,000 in Illinois. He has a large following of brokers in the city and of agents down the State. A few weeks ago he resigned and the company immediately took steps to open a branch office in Chicago on January 1, the day on which Mr. Pogge's resignation becomes effective. Edwin M. Goodwin, from the home office of the company, becomes manager and L. G. Earl, a local plate glass man, takes charge of that department.

Mr. Pogge forms a partnership with A. G. Kuhns, Jr., manager of the New Jersey Plate Glass, which has the largest plate glass business in Illinois. The feature of interest to the outsiders will be the action of Mr. Pogge's brokers and agents. Will they follow him to his new connection, or will they stay with the old company under the local management of new men? The premium returns in the Spring of 1912 will tell.

* * *

The Northern Casualty of Aberdeen, S. D., under the same management as the Northern Accident of that place, expects to get its license on January 2 and begin writing fidelity and surety business in its home State at once. Later it will take up burglary, plate glass and automobile, and eventually it will reinsure the accident business of the Northern Accident. It will start with \$100,000

capital, although that amount will probably not all be paid in by January 2. The South Dakota laws require only \$35,000 capital for home companies to write bonds. Henry H. Lovell, of Chicago, formerly manager of the surety department of the Title Guaranty and Surety, is installing the office system.

* * *

As the end of the year approaches rumors of reinsurances of weak companies become more numerous and persistent. There is practically no doubt that one or two companies already are under cover, but that the deals have not yet been announced. In addition to this, one company is known to be entertaining proposals for its sale and merger in another, neither of these being large concerns.

* * *

For the past two months burglary insurance men in Chicago, who have not had bad loss ratios, have been tapping on wood every time they mentioned that fact. The record for the city is made no better by a clean loss of \$5,000 last week by the American Bonding, when the big house of S. Silberman & Sons, jobbers in wool and furs, was robbed of \$21,000 worth of skins and ginseng. The firm is first class and the physical risk was about as nearly perfect as could be desired, so it is no case of bad underwriting. It looks very much as if somebody secreted himself in the building during the day and unbarred the doors for the robbers, as there the doors.

LA SALLE.

AETNA APPOINTMENTS.

Wellington H. Wart, of Portland, Me., for the last ten years special agent for Maine and New Hampshire of the Phoenix of Hartford, has accepted an appointment to serve the Aetna in the same capacity, and will enter upon his new duties January 1. Ralph B. Ives will continue to care for the Aetna's field in Connecticut, Western Massachusetts and Vermont, while, as stated last week, F. W. Matthews is assigned to Eastern Massachusetts and Rhode Island with the corporation of H. L. Hiscock, Boston managers of the Aetna.

In New England

BOSTON, Dec. 21. — Hearings have been appointed, one to take place in Boston Wednesday and the other in Worcester Thursday of next week, on a tentative bill drafted by the special commission created by the Massachusetts Legislature of 1910 on the subject of workingmen's compensation. It is said that the commission is not committed to the new bill, which modifies materially the present law, nor are its members in agreement on all its provisions. The measure contains, inter alia, a provision that in case of death dependents wholly dependent shall receive one-half of the wages of the deceased employee for 300 weeks, but not less than \$4 or more than \$10 a week. The same provision applies to employees partially invalidated for all time. Another provision creates an industrial accident board, the duty of which shall be to determine amounts to be paid. The bill covers employees of the State, counties, cities and towns, and all other employments where there are not more than five employees regularly employed.

Sprinklers Were Clogged.

In the course of a report on a \$6,700 fire in the paper mill of the International Paper Company, at Fort Edward, N. Y., the monthly bulletin of the Boston Manufacturers' Mutual Fire makes these statements, which show how important it is, in order to get trustworthy service, to have automatic sprinklers inspected and tested at regular intervals:

"The building was thoroughly equipped with an automatic sprinkler system and there is no doubt but that the water was on the same. Hence it was at first difficult to un-

derstand why the sprinkler equipment had not held and extinguished the fire. An examination after the fire disclosed the fact that some of the sprinklers were plugged with tubercular scale, probably from the cast iron mains, together with cinders, small pebbles, pulp and dirt. It is probable that these obstructions clogged the first sprinklers to open, with the result that the fire gained headway and opened such a large number of heads, some 200, that the water supply for same was crippled."

Fraternal Bill.

Insurance Commissioner Hardison, of Massachusetts, has prepared a bill for the regulation and control of fraternal beneficiary societies, to be submitted to the incoming Legislatures. The bill comprises thirty sections, and embodies minute provisions regarding the maintenance of the solvency and accountability of these organizations. Funds must be invested in the kind of securities required in the investment of the capital of insurance companies, and valuations of death benefit certificates are required, the minimum standard being the National Fraternal Congress table, adopted in August, 1899.

New England Brevities.

The Boston Municipal Council on Monday evening voted an appropriation of \$111,000 to build a new repair shop for the Fire Department in place of that destroyed in the lumber fire of last August.

* * *

Horace B. Pearson, formerly identified with the Field & Cowles agency, has taken an office in the Delta Building, 10 Postoffice Square, Boston,

where the numerous patrons and friends of this justly popular gentleman will receive prompt attention for their insurance needs.

* * *

The New Jersey Plate Glass has been admitted to Rhode Island with Gallivan & O'Donnell as the Providence representatives.

* * *

The annual dinner of the New England Insurance Exchange has been set for Friday evening, January 6, 1911, at Young's Hotel, Boston, the annual meeting following on Saturday morning, January 7.

* * *

At the monthly meeting of the Eastern Maine Life Underwriters' Association, held at Bangor last week, General Agent C. R. Dunton, of the Northwestern, delivered a helpful address on "Partnership Insurance."

* * *

Engineers of the National Board of Fire Underwriters are in Boston examining the fire protection and fire-fighting facilities of the city, with a view to ascertaining what progress has been made since the last examination by the National Board's corps the doors for the robbers.

Chronicle Paragraphs

JAMES W. COCHRAN, of Dallas, Tex., has been appointed Western manager at Chicago of the Philadelphia Fire Association. Mr. Cochran, who entered fire insurance at Dallas in 1883, organized and conducted for eight years the Ohio Inspection Bureau and was then secretary of the Committee of Twenty of this city. In 1905 he organized the firm of Smith & Cochran, of Dallas, Tex.

It is at last definitely settled that James V. Barry, former Insurance Commissioner of Michigan and now head of the publicity and legislative bureau of the casualty companies, is to become one of the assistant secretaries of the Metropolitan Life Insurance Company. Mr. Barry was selected for the position by the officers of the Metropolitan Life upon the retirement of F. H. Betts. The casualty men released Mr. Barry from his engagement with their bureau, and when he was in New York last week attending the conference of Insurance Commissioners he agreed with Vice-President Haley Fiske to enter the service of the Metropolitan Life.

E. J. Haynes, Jr., has been elected President of the Newark Fire Insurance Company to fill the vacancy caused by the death of John J. Henry. Mr. Haynes has been the special agent of the Springfield for the last eighteen years, covering Eastern New York and Northern New Jersey.

The accident and liability department of the Aetna Life has issued a printed copy of the new Employers' Liability law of Oregon, together with comments as to the practical abolition by the act of the defenses of contributory negligence and assumption of risk, the removal of the limit on recoveries for injuries causing death, the putting of fellow-servants in the vice principal class and on the twin law allowing verdicts to be rendered, voted by nine out of twelve jurors.

Henry C. Sommers has taken a contract to represent the Phoenix Preferred Accident Insurance of Detroit in writing policies for the employees of the United Typothetae of America, which has anticipated compensation legislation by arranging for death, sickness and accident insurance, and in addition will provide free medical attendance for its 25,000 workmen.

The chairman for the governing committee of the Workmen's Compensation Service and Information Bureau will be C. H. Franklin, United States manager of the Frankfort Marine Accident and Plate Glass Insur-

ance Company. A. Duncan Reed, of the Ocean Accident and Guarantee Corporation, has been elected Secretary-Treasurer.

Nelson D. Sterling, of the Aetna Indemnity Company, has been appointed superintendent of the plate glass department of the Fidelity and Casualty Company to succeed A. J. Ferres, who has been promoted to the superintendency of the Fidelity and Casualty agencies. Mr. Sterling is a trustee of the Plate Glass Underwriters' Association, Secretary and Treasurer of the Burglary Insurance Underwriters' Association and of the Local Board of Burglary Insurance Underwriters.

The suburban agency of the County Fire of Philadelphia, Merchants' Assurance Corporation of New York and the Commonwealth and Austin of Texas, held by Kellock & Voorhees, will on January 1 be taken over by Bainbridge & White, Brooklyn and suburban managers for the City of New York Insurance Company, Imperial Insurance Company of Denver, Col.; Cooper Insurance Company of Dayton, O.; New York Plate Glass and Aetna Indemnity Companies of New York. The Bainbridge & White agency will take larger quarters at 150 Montague Street. Mr. Kellock will retain an office at the same address and Mr. Voorhees will act as counterman.

The National of Hartford has taken over from the Phoenix, of the same place, farm and tornado risks of the Shawnee Fire, written by its former agencies in Missouri, numbering 154, and reinsured by the Shawnee with the National, which does not write Missouri farm business.

Attorney General O'Malley has refused to bring an action on the request of a New York lawyer to cancel the license of the Knights of Pythias in this State. Mr. O'Malley holds that the endowment branch of a fraternal order covering the fourth and fifth classes of insurance are specifically put under the supervision of the State Superintendent of Insurance, and that as the Knights of Pythias are, therefore, not exempt as a fraternal order from the Superintendent's jurisdiction, application should first be made to him.

The "Policy Holder" of Manchester, England, says in its last issue that, owing to the fact that no insurance company has been found willing to issue a policy covering possible claims under the workmen's compensation act, the labor yard at Windsor has been temporarily closed.

MR. LLOYD GEORGE AND COMPULSORY STATE INSURANCE

British Chancellor of the Exchequer Holds a Colloquy with a Protesting Delegation of Oddfellows Which Feared the Effect of the Proposed Scheme Upon the Benefit Societies and Fraternal Orders.

HARDLY had the Liberal victory in England become a fact, with the assurance that the British electorate had not been frightened into turning out the Asquith Ministry by its assault upon the Lords' prerogative, wielded possibly for the last time in blocking Mr. Lloyd George's budget, when the British Chancellor of the Exchequer declared that the Lords' veto bill would be only the beginning of the Liberal programme, and that the recent election would make a deeper impression upon the history of the country than any in modern times. That results are expected which may prove interesting in their effect on the insurance business was foreshadowed in the views Mr. Lloyd George expressed last month regarding compulsory state insurance against sickness and invalidism. In receiving a protesting deputation of Oddfellows, who came from Manchester to voice the alarm which compulsory insurance arouses in the ranks of benefit societies and fraternal orders he outlined one feature of the coming Liberal programme. The Chancellor's attitude was that he could find the money to give the new form of paternalism a trial if only 6,000,000 men of England who insure themselves would be calm over state provision for the 10,000,000 who cannot or do not insure themselves, and not grow restive with fear that in the outcome they themselves must foot the bills. There was a comical touch in the injunction of secrecy with which the plan for improving the methods by which thrift and ability shall carry the burdens laid on them by improvidence and incapacity, was delivered to one here and there under a ban of silence so strict that the bailee of the open state secret might not tell his wife about it. But Mr. Lloyd George is serious, and it looks as though he would have to be taken seriously.

Mr. Lloyd George's colloquy with the delegation of Oddfellows, as reported in the "Insurance Guardian and Banking Record" of London, is given below:

MR. LLOYD GEORGE received early last month a deputation of the Manchester Unity of Oddfellows at the treasury. They wished to protest against the introduction of any compulsory scheme of State insurance against sickness and invalidity, which they assert will undermine the friendly and other societies which already exist.

The members of the deputation were: Mr. Thomas Barnes, Grand Master (Plymouth); Councillor A. H. Warren, Deputy Grand Master (London); Mr. E. Bourne, J. P., Past Grand Master (Cheltenham); Mr. J. R. Barley, Prov. C. S. (Norwich); Rev. F. C. Davies, P. P. G. M. (Mitcham); Mr. W. P. Wright, P. P. G. M. (Reading); Major Hawkins, P. G. M. (South London); Mr. Ben. Kilvington, P. G. M. (York); Mr. George H. Whyard, P. P. G. M. (North London); Mr. Thomas J. W. Siddall, Prov. C. S. (Sheffield); Mr. Wallace Smith, P. P. G. M. (Bootle); Mr. R. W. Moffrey, J. P., P. P. G. M., Parliamentary Agent (London); Mr. Walter Collins, Secretary of the Order (Manchester).

Mr. Moffrey introduced the deputation.

Mr. Barnes, having thanked the Chancellor of the Exchequer for receiving the deputation, expressed appreciation of the fact that an inquiry was being made in regard to old age pensions, which he hoped would lead to the

removal of hindrances to the cause of thrift. He hoped the Chancellor of the Exchequer would believe that it was a principle for which they were contending, and not a certain amount of money.

Mr. Lloyd George—It is a question of principal with me. (Laughter.)

Mr. Barnes, proceeding, said they were glad that there was no intention to injure the societies which now existed, but at the same time they feared that what was apparently projected—

Mr. Lloyd George—What is apparently projected?

Mr. Barnes—Well, we take your words.

Mr. Lloyd George—What are they?

Mr. Barnes—A compulsory system of state insurance against invalidity and sickness.

Mr. Lloyd George—Is that all?

Mr. Barnes—No, that is not all. I am afraid it is difficult for me to state from memory all I have heard or read that you have said.

Mr. Lloyd George—Is it not important that before you go about the country denouncing a scheme from a certain standpoint that the scheme, as presented by the Minister, should really be fairly stated? Simply to say that it is a scheme for compulsory insurance against invalidity is hardly a fair statement, because it is not a comprehensive one.

Mr. Barnes—I have never denounced any scheme, but merely stated my opinion that any system of compulsory state insurance must necessarily undermine existing voluntary institutions, and in so doing interfere with the friendly societies, and the work they have been doing for many years.

Mr. Lloyd George—Even if it is worked through the friendly societies?

Mr. Barnes—In my judgment, yes. If the government is resolved on compulsion, then necessarily a scheme will be put into operation under which the voluntary institutions must suffer. If the state scheme provides for contributions by members and they are to be assisted by payments by the state, then the question arises whether or not the members of existing societies are to have their contributions lessened by an equivalent amount. If the answer were yes, then at once we would see that the independence which we have been cultivating would be undermined to that degree and there will be what we fear as an evil—an undermining of that building up of character and self-reliance which we have endeavoured continually to inculcate. If, on the other hand, no state assistance is afforded to those who are members of existing societies then naturally those societies must dwindle, because whatever may be the character of the men as individuals, they will not be prepared to pay the whole cost of their own insurance and at the same time, as individuals in the state be called upon to pay their quota toward that amount which the state provides for another section of the community included in the state scheme. There are people in the community for whom the existing orders do not make any provision. We are unable, because of the cost, to include the sick and the infirm, and we offer, if the state will come to the rescue of such—we hope not compulsorily—not only to assist with our advice, but to allow our branches and our agents to be used by the Government, so that they can reach these unfortunate people in the community. The fact that the whole community is not included does not warrant, in our opinion, any enactment which will interfere with the existing organizations. We have progressed, but a check has been put upon our advance of late years because men have been led to believe that they need not rely upon their own exertions, as there were others waiting to do for them that which they can very well do for themselves. The progress of our order has been in a greater proportion than the advance of the population of the country.

Mr. Lloyd George—Is that true of all friendly societies?

Mr. Barnes—I am not prepared to say that it is.

Mr. Lloyd George—You must see that I cannot consider this question merely from the view of one society alone. I must take the friendly societies as a whole, and see what proportion of the population they are able to provide for and what proportion they have not yet reached. I should like to know from you what your view is as to the population outside the friendly societies. I find that the total membership of the friendly societies is under 6,000,000. I understand that there is a good deal of overlapping in all that. Members of your society may belong to other societies. But that leaves 10,000,000 outside, and I should like to ask you, Are you opposed to any provision being made for that 10,000,000?

Mr. Barnes—I contend that provision is made for them if they will avail themselves of it.

Mr. Lloyd George—You contend that if you do not come forward and contribute voluntarily to a friendly society, then you must take your chance?

Mr. Barnes—Exactly.

Mr. Lloyd George—I see the position now. You are opposed to any assistance from the state?

Mr. Barnes—Out of the 10,000,000 a large number are making provision in other directions, through insurance companies and building societies, quite as effectively and to their satisfaction.

Mr. Lloyd George—They are a very small proportion out of the 10,000,000. But are they doing it effectively?

Mr. Barnes—Not wisely, but effectively to their own satisfaction.

Mr. Lloyd George—They must be the best judges of that. Surely they chose members of Parliament after a scheme of this kind was put before them, and we have their mandate to make some such provision, because they are not satisfied with the existing organizations. You say that unless they join one of the friendly societies then they must take their chance. You would let them starve?

Mr. Barnes—We do not say that.

Mr. Lloyd George—But you are dead against giving any sort of Government support toward the efforts which they

may themselves make to provide for themselves.

Mr. Barnes—My point is that the men in the friendly societies are not by any means the wealthiest members of the working classes. Those who are not in the societies are equally well, and many of them are better able to pay the necessary contributions to provide for particular benefits. The setting up of a scheme of state insurance will not only be pandering to some instincts which are not the worthiest among our people, but at the same time will deprive our people of that which has done so much to establish that fraternal and independent spirit which has for so long existed in our order.

Mr. Lloyd George—I have so much appreciation for the work of the friendly societies that my theory is that we ought to work through the friendly societies, as they are by far and away the best agencies for the purpose. There is nothing you have said about them which I do not accept in full, and I was going to make them the basis of my scheme. I have promised to meet many other societies, and I want to see them all before I make up my mind about the scheme. Up to the present I have only seen friendly societies—by that I mean societies such as yours. I want to see the insurance companies, the building societies and the trades unions.

Mr. Warren—We have come to you to-day for an assurance that we shall have an opportunity, whatever the scheme ultimately accepted, of extending our work in the future as in the past, and of preserving those characteristics which have made the friendly societies what they are.

Mr. Lloyd George—What I really want to know is this, Do you in the first place object to any provision being made for the people who, experience has shown, will not join any friendly society? I do not go into their reasons. It may be their own fault; it may be that their work is casual and they cannot keep up their contributions. But as a matter of fact, there are many more millions outside these societies than there are in them. The first question, and I ask it in all seriousness—this is not a question of controversy between the parties. Both parties are committed to a contributory scheme of insurance, and if we were turned out to-morrow I think I may venture to say that you would get a bill more or less on the same lines from the other side. Therefore, we cannot claim credit from the party point of view for it. It is the desire of both parties that something of this sort of thing should be done. When I ask questions it is with a view to finding out what your position is. You have done this work long before I was born. (Laughter.) I did not mean anything personal—(renewed laughter)—but the societies. You had been doing the work before any one began arguing about it, and therefore your opinions should be respected and given every weight. You can say to us, "You are pure theorists and we are practical men." Therefore, what I want to know is exactly what your view is. Any Minister who does not pay every attention to what you say is not giving heed to all the facts of the case. I want to know the facts of the case. Do you say that the Gov-

Organized 1850

THE UNITED STATES LIFE INSURANCE COMPANY

ISSUES GUARANTEED CONTRACTS

JOHN P. MUNN, M.D. (PRESIDENT) FINANCE COMMITTEE CLARENCE H. KELSEY <i>Pres Title Guarantees and Trust Co.</i> WILLIAM H. PORTER <i>Pres Chem. Nat. Bank</i> EDWARD TOWNSEND <i>Pres Importers & Traders Nat. Bank</i>	Good men, whether experienced in life insurance or not, may make direct contracts with this company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. --	--

ernment ought to make no provision at all for these, say, 10,000,000—you can knock off half of them if you like, and say 5,000,000—who are now not provided for?

Mr. Warren—There are other societies to which we take exception. There are the deposit societies, which take in between 3,000,000 and 4,000,000.

Mr. Lloyd George—Do you consider that provision a satisfactory one?

Several members of the deputation—Oh, no.

Mr. Lloyd George—But there are 10,000,000 who either are not provided for at all or are inadequately provided for, or what is still worse, are badly provided for. I know something of the facts of these societies. They are very costly, as more than half of their money goes in expenses.

Mr. Barnes—What societies?

Mr. Lloyd George—Some of the societies.

Mr. Barnes—Some of the societies? Ours, for instance?

Mr. Lloyd George—Oh, no. I say the provision your society is making is ideal. I cannot put it higher than that. If you had similar provisions for all the working classes of the country, not only would it not be necessary to consider state insurance, but state insurance would be a crime. But we are, however, face to face, with this 10,000,000, who, for some reason or another, are not provided for at all, or are inadequately or badly provided for. I have to deal with that fact. Now, do I understand the friendly societies to say that we, as the Government, are to do nothing at all? I am entitled to ask that question, and I do so in all kindness and sympathy in the interests of your work.

Mr. Barnes—We cannot speak with one voice in this matter, but for myself I would say emphatically yes.

Mr. Lloyd George—You take a strong individualist view. It is taken by many men in this country, and, mind you, I respect it very much. There is a great deal to be said for your view, but I think on the whole it is held by a very small minority in both parties at the present moment. The vast majority have come to the conclusion that they cannot live on a *laissez faire* policy. We are all agreed that this is one of the subjects we cannot let rest. It is a subject in which state action is required.

Mr. Barnes—How is it possible to safeguard friendly societies under a compulsory system of state insurance? You may safeguard them as they are, but they will die out from lack of new members. How can you make voluntary societies attractive to the public when by the state scheme they will have their contributions partly paid by the state.

Mr. Lloyd George—I do not see any difficulty.

Mr. Barnes—Would the same subvention be given to the voluntary societies as to the state scheme?

Mr. Lloyd George—Certainly. Good gracious, yes. I never contemplated that the friendly societies' members should not get the same benefit.

Mr. Barnes—That has never been made clear.

Mr. Lloyd George—I really cannot submit a scheme to the public until I have heard everybody and got their views. I may hear something from the representatives of the deposit societies which will compel me to change my mind. All I have done at the present moment is this: I have framed a scheme very largely in conjunction with the exceedingly able representatives of the friendly societies, and I have submitted it to experts and to the ablest actuaries in this country. I know pretty well what it will cost. I have come to the conclusion that I can find the money, and I am also perfectly convinced that, unless that scheme is materially modified in consequence of the representations of other bodies, the friendly societies will have no reason to complain at all. Quite the reverse.

A Member—How will that scheme affect our voluntary work?

Mr. Lloyd George—I have considered that, but I want to know whether you take the line, "Hands off the state. The state must not even help." It is not a question of interference. The only question is that of the interference of the Treasury in finding the money. It is not very often that people say, "Hands off!" to those who come with a few millions of money to offer to them. That is what I have to offer them. But first I must know that it is not a society half of whose income goes in expenses.

A Member—In our case the expenses are less than 10 per cent.

Mr. Lloyd George—I am glad to hear that. The cardinal and fundamental proposition upon which I base my scheme is not merely a recognition of the great work done by the friendly societies in the past, but a recognition of the value and the importance of continuing their work in the future. (Hear, hear.) What you have done

is not merely to save a great deal of human misery, but you are educating the working-classes in habits of self-reliance and of independence, in self-government and self-respect. You have done far more in that way than in the material advantage which you have conferred upon them. All that will be considered in the future.

Mr. Barnes—I quite agree as to your good intentions, but I am afraid you will do injury without intending it.

Mr. Lloyd George—I shall be sorry to do that. At the same time, I think you will find that in the long run it will strengthen the friendly societies and strengthen their hold upon the working classes. An appeal has been made to me to afford opportunities to the friendly societies of extending their work. That is exactly what I shall aim at.

Major J. H. Hawkins complained that no scheme was in existence.

Mr. Lloyd George—I have never said anything of the kind, for here is my scheme, printed and marked "Provisional." I have stated several times in answer to questions in the House of Commons that I had prepared a scheme, and had submitted it to actuaries.

Major Hawkins further declared that, in regard to old age pensions, many of the recipients were asked insulting questions by post office officials.

Mr. Lloyd George—Any such case should be instantly reported to me, as head of the Pay Department, or to the Post-master-General. Any official who put insulting questions to pensioners was guilty of a gross breach of the regulations, and would be dealt with accordingly. We should soon make an example of anyone who made insulting observations to any of these old people who went into a post office to draw their pensions. If you can quote specific instances I will inquire into the matter and see that it does not occur again.

Major Hawkins then dealt with the question of state payments and friendly society payments.

Mr. Lloyd George pointed out that a minimum contribution would be established by the Government, but that that would not prevent a man from insuring in a friendly society for any amount he liked. There was nothing the Government would like better than to encourage people to insure beyond that minimum provided by the Government.

Major Hawkins—May we ask you to state what your scheme is?

Mr. Lloyd George—I do not think that would be quite fair. A scheme of this kind must at present necessarily be not only a provisional one, but one which must have passed through all the preliminary stages of inquiry before it is made public. It has been in the hands of the actuaries. They have examined it very carefully for weeks and weeks. I have offered to submit it to the actuaries of the friendly societies. When, however, they knew who our actuaries were they were perfectly satisfied that the examination was absolutely accurate.

Mr. Barnes—You have a board of directors here. Will you submit the scheme to us?

Mr. Lloyd George—No, because I should have to submit it to other boards of directors. But I am perfectly prepared to deal with one man, and will submit it to your representative. I should like to say one word more. I am glad to have met you, because I think I have succeeded in removing some misapprehensions which legitimately existed in your minds. You know I appreciate the work of the friendly societies, and I can assure you that the Government appreciates it, too. Whatever the scheme is, we shall always have in our minds in shaping it the one dominant purpose—of not merely respecting the work done by the friendly societies, but of doing everything in our power to fortify, strengthen and extend it. I want to be in touch with you, as I hope you will assist the Government in shaping that scheme in such a way that it will not merely suit the interests of the friendly societies, but that at the same time it will be a benefit to the millions of poor people who, for reasons which I am not disposed to criticise, have not found it possible to join these friendly societies. We must consider those millions of people who, depending upon casual labor, are unable to keep up their contributions, and who find it all they can do to shift along and buy bread for their children. We are determined that something must be done in order to meet these cases. You have nominated Mr. Barnes as your representative, and he will leave here with my scheme in his pocket. He will, of course, treat it as absolutely confidential. He must not even disclose its contents to his colleagues.

A Member—Not even to his wife. (Laughter.)

Mr. Lloyd George—No, not even to his wife.

A Member—But he tells his wife everything. (Renewed

laughter.)

Mr. Lloyd George—No; for the first time, even at the risk of a breach of his friendly relations with the domestic powers, he must keep all this to himself. (Laughter.) He will have time to examine it, and in two or three weeks' time he will come up here again and, either alone or in conjunction with other nominees of friendly and other societies, have a further conference on the matter. There are others I want to see, and in the mean time I must keep an open mind. (Hear! Hear!)

* * *

The "Review" of London in its issue of December 9 published a letter written by Mr. Lloyd George on December 1, in which he says:

"The proposals which the Government have in view in connection with insurance against sickness and in-

validity are not likely, so far as I can judge at present, to interfere in any way with the business now carried on by industrial life assurance companies or societies. The proposed benefits do not include the provisions of a funeral benefit or any immediate money payment on the death of a contributor or his relatives; nor, of course, will there be any endowment for children on attaining a certain age. The whole of this field will still be left open to the existing agencies. I see no reason whatever for apprehending that the operations of these agencies will be restricted in consequence of the scheme which the Government has in view. I have given a pledge on behalf of the Government that no scheme dealing with sickness or invalidity will be submitted to the House of Commons until all the societies having any interest in the matter have been fully consulted. To that pledge I adhere."

August Belmont on Workmen's Compensation

AUGUST BELMONT, Chairman of the Department on Compensation for Industrial Accidents and their Prevention, presided at a special meeting last Friday in the National Civic Federation headquarters, in this city, to consider the proposed workmen's compensation bill. After describing the bill, Mr. Belmont had this to say:

"Since the Federation began its work several years ago, nine State Legislatures have authorized official commissions now working for compensation laws. There is also a Federal commission, authorized by the last Congress. The New York commission, as is well known, has already taken the first step in securing the enactment of a compensation law.

"Your chairman has addressed letters to the Governors-elect and hold-over Governors in States where no compensation commissions have been appointed, asking each to treat of the subject of compensation for industrial accidents in his forthcoming message to the Legislature, urging legislation to provide for the appointment of such an official commission, and expressing the hope that the State in question may take a prominent part in assisting to work out this problem on a uniform basis as nearly as possible, so that the industries in competitive States may not be put to a disadvantage. Gratifying replies are being received.

"At the request of the National Civic Federation the National Conference of Commissioners of Uniform State Laws and the American Bar Association appointed committees on compensation and the chairmen of those committees, as well as other members, are in attendance upon this meeting.

"The compensation principle has been accepted by all as being desirable. To make it applicable to all industries with due regard to the interest of employers and employees is our object.

"Let me emphasize that the rem-

edial legislation, to be advocated by the Civic Federation, will be thoroughly discussed by all parties in interest before it is presented, through the Civic Federation's State Councils, to the different State Legislatures.

"The Committee on the Improvement of State Inspection of Factories is a logical outgrowth of the work of the Compensation Department, since thorough supervision by competent and duly constituted officials is essential to the protection of workers in industrial establishments against the dangers of unguarded machinery and adjuncts.

"The extension and improvement of State inspection of factories and uniform legislation toward the prevention of accidents are topics of wide and varied interest. That fact is demonstrated by the representative types of men, all of expert knowledge in special fields, who have contributed toward the performance of its task by the committee.

"Apparently an entirely new field has been covered by this committee in the operative study of industrial statistics and statutory requirements as to accidents and as to safeguards against accidents.

"It is a maxim of military science that it is the first duty of an officer

to look after the welfare of his men and avail himself of every opportunity to preserve the military unit from injury or destruction. There is an analogy between this duty of the military officer toward the soldiers of his command and the obligation of the employer who bears a similarly responsible relation to the welfare of the wage-earners who fill the rank and file of the voluntary armies of industry. When his employees go to the activities of their daily task of production they should be both taught and required to protect themselves, by availing of every device and by the exercise of proper care, from accidents which may cost life or limb, and add to the grim, if merciful, ministration of the hospital.

"The committee entrusted with the work of estimating the cost of substituting the compensation principle for our present liability system, based upon the experience of liability insurance companies, will submit as the result of its work, in the near future, the first comprehensive data of that nature ever compiled. We shall hear to-day of the progress being made.

"It will thus be seen that the three committees having specific work to perform for this department will render altogether new service to the country."

British Employers' Liability Act

WHAT might happen here to a small employer who should neglect to provide himself with insurance in States which follow in their new legislation the lines of the British system, and particularly here in New York is shown by the following abstract of a case recently decided in a county court in England.

The court was asked to make an award for 11s. 9d. per week in favor of a workman against his employer.

Applicant, a painter, said that he was working for the respondent in

Maidstone, when he fell off a ladder and was impaled on some railings. His right thigh was severely injured and he was taken to the hospital. He had since been incapacitated for work. He had been working for respondent only three days when the accident occurred. His wages were 6½d. per hour, or 23s. 6d. per week. Previously to the accident he had worked for the defendant off and on for about ten years.

The employer said he could not dispute the facts, but it was a difficult case because he was in no better po-

sition in life than the applicant. He himself was only a laboring man, unable to get any permanent employment, and did any odd jobs in the town for any one who would employ him. The unfortunate thing was that he did not insure the applicant against accidents.

His Honor—Why didn't he insure? It was not expensive. It was difficult to know what to do in cases of this kind. Such cases led one to the conclusion that sooner or later employ-

ers of labor would be compelled to insure their workmen against accidents. As long as the rates of insurance were as moderate as they were there was no excuse for not insuring. This man (the respondent) would be ruined. There was no sympathy due to him because he could have insured for a few shillings.

The respondent stated that he did not insure because he rarely employed any one, as he did not have enough work. He also stated that

he did not know that the act applied to a casual laborer, and that he was only casually employed, and his earnings would not average more than from 15s. to £1 per week.

His Honor—The rest of your life will be taken up in working for this man (the applicant). This is one of the worst cases I have ever had before me.

His Honor ultimately made the award as asked in behalf of the workman.

State Examination of the Home

INSPECTION of the Home Insurance Company by the State Insurance Department, the report of which was filed last week, shows a surplus reliance for policyholders of \$15,918,230, counting the capital of \$3,000,000 and the special surplus and guaranty surplus funds of \$1,500,000 each, in addition to the net reserve of \$9,918,230. The net reserve was fixed by deducting from the total assets \$28,572,264, a reserve for unpaid losses of \$1,156,725, and fixing the unearned premium reserve at \$11,110,264. The examination was made as of July 31, 1910, at which time the financial condition of the company company was found to be:

Ledger Assets.	
Book value of real estate....	\$1,543,892.06
Mortgage loans	59,800.00
Book value of bonds and stocks	23,383,729.87
Cash in bank and trust companies	1,090,119.92
Agents' balances, representing business written subsequent to April 30, 1910....	1,995,880.58
Agents' balances, representing business written prior to May 1, 1910.....	190,559.50
Bills receivable taken for premiums (farm risks).....	74,514.57
Total	\$28,328,496.50
Non-Ledger Assets.	
Interest accrued on mortgage loans	\$404.27
Interest accrued on bonds...	101,722.70
Interest accrued on bank deposits	4,404.89
Due for reinsurance on losses paid	167,734.11
Market value of real estate over book value.....	200,767.94
Gross assets	\$28,803,530.41
Deduct Assets Not Admitted.	
Book value of bonds and stocks over market value....	\$45,996.54
Agents' balances, representing business written prior to May 1, 1910....	180,559.50
Bills receivable past due (farm risks)....	4,709.48
Total admitted assets.....	\$28,572,264.89
Liabilities.	
Unpaid fire and marine losses	\$1,156,725.90
Unearned premiums—	
On one year fire risks	\$3,705,070.15
On term fire risks...	7,015,277.04
On inland navigation risks...	348,905.85
On marine risks....	41,011.29
Total unearned premiums.	11,110,264.33
Due Agrippina Insurance Co. on account of reinsurance contract, \$25,832.86 and \$53.01 accrued interest	

thereon	25,885.87
Due Balkan Insurance Co. on account of reinsurance contract, \$72,974.62 and \$180.08 accrued interest thereon..	73,154.70
Due Rheinisch Insurance Co. on account of reinsurance contract, \$806.26 and \$1.96 accrued interest thereon..	808.23
Due Second Russian Insurance Co. on account of reinsurance contract, \$2,039.66 and \$493 accrued interest thereon	2,044.59
Due for other reinsurance...	275,647.91
Due for return premiums....	3,471.53
Taxes on premiums accrued (estimated)	163,600.00
Federal tax accrued (estimated)	5,700.00
Sundry unpaid bills.....	67,996.49
Liabilities except capital..	\$12,885,299.55
Capital	\$3,000,000.00
Special reserve fund	1,500,000.00
Guaranty surplus fund	1,500,000.00
Surplus	9,918,230.86
Surplus to policyholders...	15,918,230.86
Total liabilities.....	\$28,803,530.41

This statement is the result of a careful examination of each item of assets and liabilities and an examination of the books and records at the home office, as well as at the office of the Western Farm Department at Chicago.

The liability for unpaid fire and marine losses in the sum of \$1,156,725.90 was ascertained by a thorough examination of the loss registers, claim papers and correspondence in connection therewith. The unearned premium liability was arrived at by a checking of the unearned premium books with agents' monthly accounts and daily reports, home office policy registers, cancelled policies and reinsurance written and cancelled. The unearned premium liability on fire risks, as well as on inland navigation and marine risks, was computed upon a pro rata basis, excepting all postal and specific trip risks on which 100 per cent was charged, the policy contract on these two latter classes being in force until the property insured is delivered, while in all other cases the policies are issued for specified terms and contain the regular cancellation clause. The liability charged under this item was increased through such computation by the sum of \$304,729.73.

The company, in reporting in its annual statements the amounts of

premiums in force, has for years omitted to include the net writings of agency premiums for the month of December in each year and also failed to include the unearned portion thereof in the amount charged as an unearned premium liability. Such omissions are due to the fact that the company closes its books for the year on December 31, and agents' accounts for the month of December are not received at the home office until the month following. On the other hand, however, the company has not included in the credit taken for agents' balances the amount of net premiums due from agents for the month of December. While, therefore, the unearned premium liability has been reported short, the credit assumed for agents' balances was also reported at less than the actual amount due.

In reporting in its annual statements the agents' balances representing business written subsequent to October 1, the company assumed credit for balances due on agency business written during the months of September, October and November, accounts therefor being received at home office in the months of October, November and December and the balances due on business written prior to September 1 were reported in such annual statements as agents' balances representing business written prior to October 1. The inclusion of the unpaid September balances as a credit in the company's statement is an incorrect return, unauthorized by the law or by the requirements of the blank, and the statements hereafter filed should be made up in accordance with the accepted requirements.

The Home Insurance Company of New York was organized as a joint stock fire insurance company on April 13, 1853, with a capital of \$500,000, divided into 5,000 shares of stock of the par value of \$100 each. The charter ran for thirty years, and at its expiration in 1883 was extended for a like period of time. In July, 1858, the capital was increased to \$600,000 and 1,000 additional shares of stock were issued of the par value of \$100 each. In February, 1859, the capital was further increased to

\$1,000,000 by the issuance of 4,000 shares of stock of the par value of \$100 each. In December, 1863, the capital was increased to \$2,000,000, 10,000 additional shares of stock being issued of the par value of \$100 each.

In July, 1870, the capital was increased to \$2,500,000 through a declaration of a 25 per cent stock dividend and 5,000 additional shares of stock were issued. On November 10, 1871, an assessment of 60 per cent was levied upon the capital stock of the company, for the purpose of making good an impairment of its capital in the sum of \$1,500,000, pursuant to a requisition of the Superintendent of Insurance of the State of New York, dated November 10, 1871, and was paid in on or before December 11, 1871. The aforesaid impairment of capital was the result of extraordinarily heavy losses sustained by the company through the conflagration in the city of Chicago in 1871. In January, 1875, in addition to the regular semi-annual dividend, a stock dividend of 20 per cent was declared, thereby increasing the capital to \$3,000,000, divided into 30,000 shares of stock of the par value of \$100 each.

On May 1, 1901, the company commenced doing business under Sections 130, 131 and 132 of the Insurance law, creating a special reserve fund in the sum of \$1,500,000, such amount being deposited with the Superintendent of Insurance of the State of New York, as provided in Section 131 of the In-

surance law, and a guaranty surplus fund in a like amount, policies of insurance being issued in accordance with the provisions of the afore-mentioned sections of the Insurance law.

In December, 1869, the company opened a branch office in the city of Hamburg, Germany, for the transaction of the business of fire insurance in Europe. This agency was continued until December 31, 1878, when the company finally ceased writing European business.

The company transacts business in Canada, Mexico and Cuba, in addition to practically every State and Territory of the United States, with a net premium income of over \$11,000,000. It is represented by about 8,000 regular agents reporting in detail to and under the direct supervision of the home office. In addition to this agency force there are about 800 agents writing farm risks only, reporting to and under the direct supervision of the western farm department in the city of Chicago.

From January, 1854, to July, 1910, the annual dividends paid to stockholders varied from 10 per cent to 30 per cent, excepting the year 1872, when only a 5 per cent dividend was paid, and in 1873, in which year the payment of dividends was omitted, owing to heavy losses sustained in the city of Boston during said year. In addition to these dividends a stock dividend of 25 per cent was declared in 1870, and in 1875 a further stock dividend of 20 per cent.

GRAND CENTRAL EXPLOSION.

A survey of the wreckage caused by the explosion of the New York Central power house at Fiftieth Street and Lexington Avenue, by plate glass underwriters is the basis for computing the plate glass loss covered by insurance at over \$25,000. The companies paying the losses will take subrogations from their assured and present a claim to the New York Central.

FRATERNAL PROBLEMS.

Sixteen articles on "Life Insurance Problems Confronting Fraternal Benefit Societies" in reference to valuation and readjustment and their relation to the uniform law on the subject adopted by the State Insurance Commissioners have been published in book form by their author, Abb. Landis, of Nashville, Tenn. The work contains much information on the British friendly societies, which number 457, one of them having started in 1690, another in 1714, and thirty-four others having an existence of more than a century. There is also published the British legislation on friendly societies of 1896 amending the act of 1875. The author argues that the uniform valuation law proposed for the United States is an advance on the British law because it adds to the publicity with freedom principle underlying the Brit-

ish system of supervision the requirement of progress toward technical solvency. Attention is called to the fact that the "Manchester Unity" has been in a "chronic state of readjustment since 1853" of its contribution rates to its experience.

OBITUARY

Alexander J. Clinton.

Alexander James Clinton, eighty-five years old, died Monday at his home in this city. He was one of the organizers and the first President of the Eagle Fire Insurance Company.

John Henry Morris.

John Henry Morris, for many years President of the Merchants' Insurance Company of New York, and of the Stuyvesant Safety Deposit Company, died Sunday, in his eighty-fifth year at the home of his daughter in this city. During the Civil War Mr. Morris was Collector of Internal Revenue for Westchester, Rockland and Putnam counties, receiving the appointment from President Lincoln.

Fire Protection and Prevention

AT THE November meeting of the Philadelphia Chapter of the American Institute of Architects a conference was held on fire protection and equipment of buildings in cities, which had been arranged by the committees on programme and on public information of the Institute.

In planning this conference it was the purpose of the committees named to bring together all forces working for the protection of life and property, the reduction of fire hazards and the betterment of building construction in Philadelphia.

Invitations were sent to the representatives of all the interests named, among them being: Herbert P. Onyx, Engineer of the Associated Factory Mutuals Insurance Companies; John H. Kenney, Assistant Secretary of the Philadelphia Fire Underwriters' Association; Henry Clay, Director of Public Safety; Edwin Clark, Chief of the Bureau of Building Inspection; James S. Baxter, Chief of the Fire Department; William McDevitt and P. D. Stewart, of the Philadelphia Fire Underwriters' Association; John E. Codman, Chief Engineer of the High Pressure Department, Bureau of Public Safety; Professor William

Easby, Instructor in Engineering, University of Pennsylvania, and President of the Engineers' Club; Frank H. Reeves and Charles Elmer Smith, President and Secretary of Master Builders' Exchange; John C. Trautwine, Engineering Expert, and William D. Hewitt, architect, President of the Chapter.

In addition to the members of the Chapter, there were present also representatives of telephone and insurance companies, members of the Engineers' Club, the T Square Club and the University of Pennsylvania, as well as some of the city's firemen. Mayor Reyburn sent a letter of regret and requested that a report of the meeting be sent him.

The presiding officer, D. Knickerbocker Boyd, in introducing the first speaker, representing the National Fire Protection Association, said, in part:

"These people have in their own practical way, by discouraging the use of combustible materials in building construction, been doing more for the conservation of our natural resources than almost any other agency.

"We find that when their suggestions are followed, charges are reduced to a minimum, better construction is

the result, and better protection of life and property is obtained.

"In thus placing a premium upon good construction, what they do in reality is to put a penalty upon poor construction, and it falls upon us—the architects, engineers and builders—to co-operate in this great movement by convincing those who have capital to invest that it is to their financial advantage to use only permanent materials.

"It behooves us, therefore, to come together in such meetings as this, and to exchange helpful suggestions, the published results of which will awaken the public to a livelier interest in their own welfare."

Mr. Herbert P. Onyx, the Engineer of the Associated Factory Mutuals Insurance Companies, then read a paper, which he had prepared for the occasion, during the course of which he said:

"The curtailment of the enormous fire losses which we have sustained in our country will not be accomplished until the subject of fire prevention and protection has received the same consideration by the general public that has been given to the stamping out of contagious diseases. Fire, like disease, has its origin in

The Best Paid Hard Work in the World

Life Underwriting has been described as "The Best Paid Hard Work in the World," and consequently one of the most remunerative vocations in which any one without capital can engage.

THE EQUITABLE LIFE ASSURANCE SOCIETY OF THE UNITED STATES

has several openings for men who possess organizing ability and who can work up a business from territory at present inadequately developed. Plenty of hard work and commensurate remuneration to those who possess the necessary qualifications.

many sources; records show that fires have originated from over 100 different causes, fully half of which can be traced directly to carelessness, whether gross or due to indifference; negligence and ignorance contribute largely to the heavy burden of fire tax, which is shouldered by the public in general.

"How long would the citizens of any community tolerate a condition that would be conducive to the spreading of a contagious disease? Unfortunately, the general public is not aware of the conditions existing in many buildings throughout the land, which could justly be called 'death traps,' and cause as much heartache and sorrow as the average disease epidemic—in fact, the chances of a fight for life are far less in many existing 'death traps' than they would be in an epidemic of disease.

"We are coming out of the dark ages of waste and extravagance, but while we have made wonderful progress in the various arts, sciences and industries, future generations will marvel at the extravagance that was so long tolerated by us; we will be looked upon as having burned up in thirty years \$4,500,000,000, in spite of the fact that an equal amount was expended in fire protection. Here is certainly room for thought and action on our part, especially when it is considered that property destroyed by fire represents values absolutely wiped off of the face of the earth, and which cannot be replaced.

"Although it would be unreasonable to assume that fire can, under all circumstances, be prevented, it has been repeatedly demonstrated, however, that where the constructive features and proper protective appliances are installed and properly looked after, the loss from fire can be reduced to such an extent that the cost of insurance is so low as hardly to become a factor in the expense account.

"The economic conditions governing the success of a manufacturing or mercantile industry to-day demand that the business shall not be interrupted by fire—in fact, business men are expecting more and more from their architects and engineers in this direction, and the time is at hand when the obligations of the architect and engineer to his client in the design and execution of any form of structure will not be fully discharged unless he has assured him that the means of preventing and protecting the property against fire have been thoroughly considered in the evolution of the plan.

"The National Fire Protection Association has a well organized laboratory, which is doing a wonderful work in the promotion of better standards, both in construction and in protection, and the doors are always open to you gentlemen, as it is fully realized that architects and engineers and builders are the direct medium through which the advancement in

the curtailing of fire losses can be most successfully accomplished."

Mr. Onyx followed his paper by a suggestion, made more timely by the fact that the Director of Public Safety was present in person, that organized and systematic inspection of buildings be made by members of the regular public Fire Departments under direction of the Bureau of Public Safety, backed by proper legal authorization.

The Director of Public Safety of Philadelphia, Mr. Henry Clay, who attended throughout the session, followed Mr. Onyx and gave a detailed description of the fire-fighting apparatus possessed by the city and explained the organization of the Fire Department. James S. Baxter, the head of the department, then addressed the meeting and described the work of the men under him.

Mr. Kenney, the Assistant Secretary of the Philadelphia Fire Underwriters' Association, was the next speaker, and in the course of his remarks said:

"The paper just read by Mr. Onyx covers the fire underwriters' situation very generally, and what he has said will largely apply to the organization which I have the honor to represent—the Philadelphia Fire Underwriters' Association. The association's 'object,' as outlined in its constitution, defines clearly the work carried on by it. I will read it:

"The object of this association shall be the reduction of the fire waste of the city of Philadelphia, the establishment of just and fair rates, limited and perpetual, whereby the cost of fire insurance may be equitably distributed among all classes of manufacturers, merchants, private householders and others. For these purposes this association will establish a system of schedule and minimum ratings, giving the best risks the lowest rates, and adding specific charges for all deficiencies from required standards, making reductions from such rates when the deficiencies charged for are eliminated, and will also provide rules and plans for regulating the practices of the business of fire underwriting in the city of Philadelphia."

"The reduction of the fire waste is the association's principal object. The making of rates by schedule and by minimum is for the purpose of securing that, and to receive from the insuring public sufficient income to pay losses and to make a reasonable, and only a reasonable, profit in the business.

"During the last several years it has been the practice of many architects and builders to confer with the association on almost all buildings of importance which they have constructed. Result of these conferences has been better constructed and better protected buildings and lower insurance rates.

"As noted by Mr. Onyx, the Na-

tional Fire Protection Association is doing very valuable work. In addition to its general work, it is now maintaining a publicity bureau. This bureau uses every available channel for acquainting the public with fire hazards and its recommendations for reducing fire waste. In addition to publications of the National Fire Protection Association, one of its active members—the National Board of Fire Underwriters—has published what is known as 'The National Building Code,' recommending that this be adopted by municipalities as their code. This has been done in some instances and in others it has been largely used, some changes being made to care for local conditions. In addition to the publications of the National Fire Protection Association and the National Board of Fire Underwriters, many insurance companies, inspection bureaus, local boards, etc., have issued pamphlets referring to the desirability of having well built and well protected structures, good housekeeping and general supervision. Inspectors visit manufacturing and mercantile establishments, warehouses and other properties for the purpose of using their influence to keep the premises in a clean and safe condition. The local association does a large amount of this work, and, as a result of its efforts in this direction, many standpipe and hose systems, wired glass windows, fire doors, fire shutters, fire pails, extinguishers, etc., have been provided, broken windows repaired, unsafe chimneys made safe, dirty buildings cleaned and conditions in general much improved.

"The relationship between the Bureau of Building Inspection and the association is harmonious, and it affords me pleasure to acknowledge the services being rendered to the public by this bureau.

"It is the desire of the association that architects, builders and the general public visit our office and confer with us in reference to the construction and protection of property and the reduction of the fire hazard."

The allusions of Mr. Kenney to the co-operation of the Bureau of Building Inspection with the Underwriters' Association were particularly appropriate, as Edwin Clark, the chief of the bureau, was present and responded with a drastic suggestion for the improvement of building construction in general and in "conflagration districts" in particular. He said, in part:

"I would recommend to the next Legislature the passage of a law which will demand that all newly constructed buildings in the section bounded by Vine and South Streets and the Delaware and Schuylkill Rivers be either incombustible or absolutely fireproof. Those built to a height of not more than sixty-five

(Continued on Page 13.)

Texas State Rating Board Acts Under New Law

THE State Insurance Board of Texas has issued its first orders under the new law. Each subject is explained complete in itself, and the order addressed to the companies doing a fire insurance business in the State of Texas and their agents and representatives is as follows:

"Since the State Insurance Board law became effective December 10, 1910, a number of companies and agents have made inquiry to the board for instructions as to the conduct of their business with reference to complying with said law. It was, therefore, deemed advisable to the board to promulgate the following general orders and regulations to operate and to be observed in writing insurance, pending the preparation of new general basis schedules.

"By authority of section 14 of the State Insurance Board law, effective December 10, 1910, it is hereby ordered that the maximum specific rates at which fire insurance policies or contracts may be issued shall be as follows:

"On risks to which the general basis schedules in operation in the State of Texas, December 9, 1910, have been applied, to the maximum rates shall be those promulgated specific rates on file or which may hereafter be filed with the State Insurance Board, said rates being subject to all rules, regulations and reductions as provided for in the general basis schedules above mentioned.

"On risks to which, under the general basis schedules in operation in the State of Texas, December 9, 1910, specific rates were not required to be filed with the State Fire Rating Board, such as dwellings and (or) contents, etc., the maximum rates shall be those obtained by the proper application of general basis schedules above mentioned.

"On risks to which the general basis schedules in operation in the State of Texas, December 9, 1910, have not been applied and on which insurance has been heretofore carried the maximum rates shall be those at which fire insurance policies or contracts have been last heretofore issued, provided, however, that if change of hazard has occurred, or if hereafter any change of hazard may occur, or if such risks shall be hereafter specifically rated under the general basis schedules above mentioned, such risks shall be treated as set forth in the fourth subdivision of this order.

"On risks not covered by the foregoing subdivision the maximum rates shall be those rates obtained by applying the general basis schedules in operation in the State of Texas December 9, 1910, to the risks in ques-

tion, and such rates shall not become effective until same are filed with the State Insurance Board.

"Fireproof Risks—The order of the State Fire Rating Board, effective July 11, 1910, provided, among other things, for a reduction of $7\frac{1}{2}c$ for each additional ground floor occupant for which a charge of 15c had been made. It was not the intention that this reduction should be made on such risks as had received credit for fireproof construction, as said credit reduced the 15c charge to $3\frac{3}{4}c$, or an amount much less than $7\frac{1}{2}c$. As there has been some misunderstanding in this connection, it is hereby ordered that the $7\frac{1}{2}c$ reduction above referred to shall not apply to risks receiving credit for fireproof or semi-fireproof construction.

"Sprinklered Risks—It is hereby ordered that risks receiving credit for automatic sprinkler equipments are not subject to the reductions heretofore ordered by the State Fire Rating Board.

"Agents to Report to the Board—Under Section 10 the board is empowered to require sworn statements from any insurance company, and from any of its agents, as to rates and premiums and all necessary facts and information to assist in the enforcement of the provisions of this law.

"It is therefore hereby ordered that any agent writing insurance below the maximum rate shall at the date of issuing the policy furnish this board by registered mail with a sworn statement of the transaction on blanks prescribed by the board, which shall be furnished on application. The board deems this necessary in order to protect all policyholders, and to be in immediate possession of any information warranting a reduction in insurance rates.

"Rates Below the Maximum Specific Rates—Under sections 12 and 14 of the law, any company may write insurance at a lower rate than the maximum rates provided for by this act upon condition that the company making such reduction shall forthwith file with the board a statement of such reductions on forms prescribed by the board and payment of 10c filing fee.

"Section 22 says: 'No person shall knowingly receive or accept from any insurance company or from any of its agents, sub-agents, brokers, solicitors, employees, intermediaries or representatives, or any other person, any rebate of premium payable on the policy, or any special favor or advantage in the dividends or other financial profits accrued, or to accrue thereon, or any valuable consideration, position or inducement not specified in the policy of insurance,

and any person so doing shall be guilty of a violation of the provisions of this section, and shall be punished by a fine of not exceeding \$100, or by imprisonment in the county jail for not exceeding ninety days, or by both such fine and imprisonment.'

"The board is of the opinion that no

company is permitted to grant insurance at lower than the maximum rates except by compliance with the requirements of Section 12 in this connection; also that no policyholder can knowingly receive or accept any policy at less than the maximum rate, or any valuable consideration whatsoever, without incurring the severe penalties provided under this section unless the difference in rate or other consideration be stated in the policy.

"Construing these three sections jointly, the board is of the opinion that in order to comply with all of them, any company desiring to grant insurance at lower than the maximum rate, and not desiring to incriminate its policyholder, should write the pol-

icy at the maximum, and any reduction in the rate should be specified in the policy of the insurance as provided in Section 22 of the act.

"Coinsurance Clauses—Section 18 provides that no coinsurance clause shall be used in any policy or contract of insurance, except at the option of the assured, and when a reduction is made in the rate.

"The general basis schedule now on file with the board, and which under Section 14 of the law must be continued pending the promulgation of new schedules by the board, provide rates with coinsurance and without coinsurance, as per Amendment 29 attached to Page 234 of said schedules. We are of the opinion that

Sections 14 and 23 must be construed jointly, and that the use of the coinsurance clause is solely at the option of the assured; however, the rate will be governed by the use or omission of said clause, as provided by the general basis schedules now in use by underwriters.

"For example: Rate with 8 per cent less coinsurance clause, \$1.

"Rate with 70 per cent coinsurance clause, \$1.12½.

"Rate with 60 per cent coinsurance clause, \$1.33½.

"Rate with no per cent coinsurance clause \$2.

"The above orders and recommendation are hereby made effective from date."

Insurance News in the West

CHICAGO, Dec. 28.—Gloom was cast over Chicago last Thursday by the tragic death of Chief Fire Marshal James Horan, Second Assistant Fire Marshal William J. Burroughs, three captains, four lieutenants and twelve firemen, besides three other men, when a wall of Morris & Co.'s Warehouse No. 7 fell upon them, following an explosion during the fire they were fighting. This was the worst fire the packing house district has experienced in years.

Fire was discovered early in the morning in the hide storeroom in the basement of the beef warehouse. How it started may never be known. There were electrical defects in the Morris plant, which the company had been urged so long ago as last May to have corrected. There is a suspicion that the fire started from such a defect. The cause of the explosion, which blew off the roof and toppled the wall is not known certainly. One theory is that it was the sudden heating of the air in the great tight-walled building. The water supply was insufficient. City officials claim that the mains were in good condition, but the City Engineer says they were not large enough to supply sixteen engines on one block. The first firemen on the scene assert that an employe of Morris & Co. told them that the fire pumps in the plant had been shut down over night in order to save coal, and the firemen state that there was no pressure in the standpipes in the building.

For seven or eight years efforts have been made to get the city to install a high pressure system, but nothing has been done further than to get the report of a commission appointed to investigate the subject. Want of funds, the fact that at some future time the streets are to be torn up to put in subways and other excuses have been made. The packers wanted to put in a main of their own to the lake, but an ordinance authorizing

them to do so never got passed. First Assistant Fire Marshal Seyferlich condemns the burned buildings as mere fire traps. Only a few days before his death Marshal Horan, while the Council was wrangling over whether downtown fireproof buildings should be limited to 200 or to 260 feet in height by the new building ordinance, told the Aldermen that he cared nothing about the height of the downtown buildings, but that he wanted better buildings at the stockyards.

Already there is much talk of a high pressure system. There is a movement on to provide for it in the city budget for next year. It seems to require a disaster to make Chicago do what ought to be done. It was seven years ago this week that the Iroquois Theatre holocaust sacrificed 672 lives. Then the city got busy on unsafe theatres. Maybe last week's memory will remain long enough to result in some radical improvements.

The property loss in the stockyards fire will amount to something like \$1,000,000. The insurance loss will be about \$400,000, as the buildings were not insured. The fire probably burned up the contingent commissions of several Chicago agencies.

* * *

Announcement last week that O. C. Kemp, the Western manager of the Delaware, Reliance and Rochester German, had admitted to partnership George H. Batchelder, the assistant manager, was received with interest and pleasure. The Kemp general agency is one of the most substantial in the West. Six or seven years ago Mr. Kemp ran a small general agency of the Delaware and Reliance. The companies had not much of a reputation in the field, as they were small writers, and often were found in non-board agencies. Part of the office force was disloyal to the general agent, and on the whole, the general agency was not regarded very highly. Then Mr. Kemp reorganized

the establishment. He secured G. H. Worthington, one of the best office managers in the city, and the office force was welded into a loyal, harmonious organization. He secured some very high-grade field talent, broadened the underwriting policy, added the Rochester German to his fleet and got from the Rocky Mountain field George H. Batchelder, an experienced field man, as assistant manager. In the last few years the tone of the agency has changed entirely, and now it is one of the finest in the West. Mr. Kemp has had it in mind for some time to make Mr. Batchelder his partner. The firm will be Kemp & Batchelder.

* * *

The reinsurance of the Eastern business of the Western Reserve of Cleveland last week occasioned no great surprise in Chicago. Fire underwriters had expected the company would have to do something. Its loss ratio for 1909 was in excess of 90 per cent, and all this year it was known to be in a weak condition. In spite of its misfortunes, it has many friends in the West. It has never been a disturber in the field. It is another company that spread out too far and too fast. Its small size did not enable it to command the best class of business, as it was generally represented in union agencies, where the other companies were large and had the preference.

* * *

A Western manager stated last week that he had encountered half a dozen companies, which were reported to be looking for reinsurance, but had not found one of them ready to quit, although none seemed insulted by having the question brought up.

* * *

From current reports a number of the most prominent companies will show decreases in their premium incomes in some of the Western States.

FIRE PROTECTION.*(Continued from Page 9.)*

feet I would have incombustible. Those of a greater height should be built of fireproof material.

"Under the existing building laws the number of incombustible and fireproof structures which have been built in that section can be numbered on the fingers of two hands. Enforcement of a law such as I advocate would mean, therefore, radical changes in building construction. I believe that the section, which would be classified as the 'congested district,' is destined to become the real mercantile center of Philadelphia. I am looking to the time when it shall house a number of important manufacturing establishments, as well as many great mercantile houses. Hence my decision to make the district absolutely safe from conflagrations.

"The present laws do not require incombustible material in buildings up to sixty-five feet in height. Ordinary mill construction types of wood and iron are acceptable to the Building Bureau. The underwriters consider such risks good in the event of installation of sprinklers in the buildings. Under the proposed revised code, however, these structures must be made of material which cannot burn under any conditions, and a building above the height mentioned must have incombustible materials thoroughly fireproofed. In the event of my suggestion becoming a law, buildings of the ordinary type now in use will not be permitted to go up. I figure that the reductions in fire insurance, which will naturally follow the adoption of such a law, will be sufficient to more than make up the added cost to the builders, which will result from the superior construction."

Mr. John E. Codman, the Chief Engineer of the High Pressure Fire Service of Philadelphia, read a paper giving in detail the workings of the two pumping stations and of the service lines themselves. He illustrated his talk with line drawings on the blackboard and with lantern slides, in describing a system believed to be one of the finest of its kind in the world for the prevention of a conflagration and for the quick extinguishing of local fires without engines.

After this the subject was discussed by John C. Trautwine, Professor William Easby, Director Clay and Chief Baxter. Mr. Easby said:

"The first speaker of the evening asked: 'What is the engineer doing to help reduce the fire loss?' In answering his question I want to point out the assistance which the city officials can render to engineers in making designs. To begin with, the engineer has very insufficient data upon which to work. For many years I

have taught young men at the University of Pennsylvania the subject of municipal water supply, involving, of course, a question of protection against fire loss by the use of water, and in that time I have collected all the data I could find in reference to the design of distributing systems and find that they are extremely meagre. It seems that during the progress of fires but few reliable observations have been taken of the amount of water used, and that information is very necessary as a basis for design work. Most any engineer who has a very imperfect knowledge of distributing systems can design one, but it requires experience and knowledge and a command of all the data which is available to enable him to supply certain assumed quantities of water at assumed pressures at certain points in the most economical way possible. The problem is an extremely difficult one, even when reliable data are available. Mr. Emil Kuichling has presented a formula for determining the number of fire streams which is now largely used by engineers.

"The economy in design in using a high pressure system which is entirely cut off from the ordinary system arises from the fact that higher velocities, and, therefore, much smaller diameters may be employed than is usually permissible.

"There is a great advantage in being able to take water directly from the fire hydrants without the intervention of any fire engines, and this is provided for, to a very great extent, in these high pressure systems. The construction of extremely high buildings and the excessive ordinary demands made on existing piping systems have forced the construction of these high pressure systems. Furthermore, it is not possible to place the ordinary system under the pressures which are required to force water to these great elevations."

Other conferences will be arranged for by the proper committee.

NON-ADMITTED BUSINESS.

R. H. Macy & Co., 1317-1329 Broadway, New York City; Pieris, Buhler & Co., 109-111 Spring Street, New York City; The Sterling Bronze Company, 107-113 West Twenty-fifth Street, New York City; The Ecuadorian Panama Hat Company, 116 East Fourteenth Street, New York City; Abraham & Straus, et al., 422-436 Fulton Street, Brooklyn; Peter Cooper's Glue Factory, Maspeth and Gardner Avenue, Brooklyn; Metropolitan Jockey Club, Jamaica, N. Y.; Ward Refining Company, 39-47 Tenth Street, Long Island City, N. Y.; Oakes Manufacturing Company, Astoria, Long Island, have filed in the Insurance Department at Albany the affidavits required in order to place insurance with companies not admitted to do business in this State.

MOTOR TRUCKS ON PIERS.

Use of motor trucks and gasoline wagons in the trucking business has gained encouragement in this city by the action of the New York Fire Exchange in removing the 5 per cent charge in the insurance rates on the contents and structures of wharves and docks unless the wharf owners exclude petroleum-propelled vehicles from the piers.

The ruling is as follows: "The base rate for piers is hereby advanced from \$1.25 to \$1.60, except that the base rate for piers of superior or semi-fireproof construction, conforming to specifications for that class on file in the office of the exchange, shall remain \$1.25 as at present. The present counter advance on piers of 25 per cent in certain portions of the exchange territory and of 5 per cent in other portions is hereby rescinded; and the present requirement for the inclusion of a charge of 5 per cent in the card rates on structures and contents of piers the owners or lessees of which have not filed a warranty agreeing that vehicles propelled by the use of gasoline, naphtha or other hydro-carbon oils will not be permitted on their piers except when under shipment as freight, and then only with no gasoline, naphtha, etc., in their tanks, is hereby rescinded."

T. F. Kane, of the exchange, said that the embargo was rescinded because the use of safety appliances have so changed the conditions concerning motor trucks that to-day they are regarded as a very small hazard.

ACCEPTANCE OF BONDS.

Commissioners William H. Hotchkiss, of this State, and Joseph Button, of Virginia, will take up the subject of the acceptance by the Federal Government of surety company bonds with the Secretary of the Treasury. They will present the recommendation of the Committee on Casualty and Surety Insurance of the National Convention of Insurance Commissioners, that in place of exactions as to examinations and quarterly statements enforced since last March by the Treasury Department for the acceptance of bonds incident to the operation of the Federal Government, the certificate be accepted of the supervising official of the home State of the company furnishing the bond.

SANITARIUM SANCTIONED.

Dr. Eugene H. Porter, State Commissioner of Health, and Dr. J. S. White, Health Officer of the town of Moreau, Saratoga County, in spite of strong opposition from Saratoga Springs residents, have granted permission to the Metropolitan Life Insurance Company to establish a hospital for the treatment of tuberculosis at Mount McGregor, Saratoga County,

NEWS IN THE WEST.

(Continued from Page 11.)

Some of the Illinois field men report decreases, and this appears to be quite a common condition in Wisconsin. In the latter State rates are being pretty well observed, but reduction in dwelling house rates, equipment of a number of large risks and loss of lumber and woodworkers to mutuals and syndicate companies has played havoc with premium incomes. In Michigan rates are reported in rather bad shape. In Iowa, Nebraska and Missouri the rate condition is very bad, as usual.

Add to the falling premium income the fact that losses in some sections have been so bad that loss ratios of certain companies will run above 100 per cent in these States and it readily may be seen that 1910 has been a far from favorable year in the West.

* * *

Insurance companies appear to have a remarkable difficulty in learning that Fred W. Potter is running the insurance department of Illinois. Mr. Potter, being the duly appointed Superintendent of Insurance, naturally would run the department, but some companies have indulged in the belief that Governor Dencen was Insurance Superintendent in fact, and afterward have had occasion to regret their error.

The aforementioned fact is brought to the front again by news that has leaked out of the department about the recent failure of a company to secure a much-sought license. Naturally, the name of the company has been withheld, as there was no intent publicly to embarrass it. There are certain peculiar features about

the company of which the Insurance Department does not approve. Two representatives spent several days laboring with the department. Then they went to Governor Dencen. There they got no satisfaction, as he is not interfering with the department's rulings. The attempt to go over Superintendent Potter's head has not put him in a pleasant frame of mind, and there is a suspicion that this company will wait for some time before it convinces him that its plans are all right.

The management of the United States Life Endowment Company of Chicago made a similar mistake a few months prior to its failure.

* * *

The Supreme Court of Illinois has decided that George H. Holt, President of the Policyholders' Union of Chicago, Vice-President of the Columbian National Life, lumberman, capitalist, clubman, etc., is a resident of Illinois. Accordingly, he must pay taxes on \$75,000 in Lake Forest, an aristocratic Chicago suburb, where he lives part of the year. He has a home in California, which he claimed as his residence, and one in Wisconsin. The court based its decision on his being President of the Lake Forest Water Company and being a member of two clubs.

* * *

Last week was a hot one in the Western fire insurance. On Wednesday occurred the conflagration at Cincinnati, the property loss in which was roughly estimated at \$2,000,000. On Thursday came the packing house fire at Chicago. On Friday, while the Morris packing plant was still burning, the business portion of Madison Lake, Minn., was wiped out, with a reported \$100,000 loss. LA SALLE.

In New England

BOSTON, Dec. 28.—Mr. Henry E. Hess, for many years special agent for New England for the Connecticut Fire, subsequently manager of the New York Fire Insurance Exchange, and most recently Vice-President of the Fidelity-Phenix, spoke before the graduate school of business administration at Harvard last week on "The Proper Assessment of Fire Insurance Rates in Great Cities." Mr. Hess has definite ideas and the gift of stating them with clarity and convincing force, and his discourse was, as usual, closely reasoned and cogent. He considered that the present methods of classification are defective in that they group together things similar in name but not in nature, and proposed a strikingly new method of classification, which is outlined in the following extract from his address:

"The trouble would lie, and does

lie, with our undertaking to throw together in our classifications as similar, units which are completely dissimilar, and whose only reason for being segregated in the same class lies in their happening to bear the same name. The whole thing strikes me as illogical, unfair and misleading, and no classification along these lines, no matter how complete and comprehensive, can produce results that will be sound and equitable.

"The remedy lies, it would seem, in adopting an entirely different method of classifying risks, whereby no matter by what name called, those having a similar degree of potential fire hazard and susceptibility to damage will be classed together. Thus, if we image a perpendicular scale divided into 100 degrees, there would be grouped together between one and ten those risks having the lowest hazard, and between ninety and one

V—No information. Q—Quarterly.

hundred those having the highest, with all intermediate grades provided for between. And a risk would no longer be classified as a fireproof warehouse, or a mercantile block, or a frame planing mill, but as a five-degree, or a fifty-degree, or a hundred-degree risk. That, I know, is very radical, and it involves an entire readjustment of existing methods, but I see no other way of producing a uniform classification upon which rates may be intelligently predicated, so that all risks involving the same degree of fire hazard shall be charged the same rate. Such a classification would mean that risks, instead of being grouped together in name classes based upon occupancy, each standing by itself, and having no relation to the other classes, as is now the case, would be classified upon horizontal planes, all the risks standing upon which would measure to the degree of that plane, no matter what the occupancy or name of such risks might be. In other words, these horizontal planes corresponding to the degrees upon the hazard scale would intersect every name class and care for the individual risks in that class according to their merits, the better ones falling upon low planes, and the worse ones falling upon high planes. Each plane would carry its rate, so that the moment the degree of hazard of a risk was fixed its rate would also be determined, and, if at any time the loss ratio of the country called for either an advance or a reduction, the desired result would be effected by moving the entire scale up or down against the hazard scale, so that there would be an equal distribution of the change over the entire business of the country, instead of over only one or two, or, at most, a very limited number of classes, as at present. Minimum rated groups of risks like dwelling houses, all the members of which carry the same rate, could be

assigned to their proper places as readily as specifically rated single risks, and would participate in the same general treatment. That is the rough outline, to smooth which into a practicable and symmetrical whole would call for a vast amount of work, but that work, if properly directed and co-operated in by all, would not amount to as much as is now given to scattered and dissociated efforts, and in the end would afford equitable and acceptable results."

Incidentally Shown.

The Bohemian district of Boston was thrown into considerable excitement early last Thursday morning by a fire which gutted the Hotel Epicure, a resort of the jeunesse (more or less) doree of the town and did considerable damage. Incidentally it was shown how valuable a neighbor a building is, which is not only well equipped to fight fire within its own space, but also to resist exposure damage. The Siegel department store, which was exposed by the Hotel Epicure fire, not only protected itself with a water curtain from its outside sprinklers, but its fire-fighting corps assisted materially in extinguishing the hotel fire.

The Exchange.

At last Saturday's meeting of the New England Insurance Exchange Messrs. Hiscock and Downey reported a memorial to the late A. C. Adams, which recalled his service to the Exchange as a member of many committees, chairman of its Executive Committee during the first two years of its existence, and as its President in 1804.

George L. Shepley, Thomas L. Obrion, O. W. Tapley and Ernest Nixon were elected honorary members of the Exchange, and C. B. Mackinney, special agent of the Union Fire of Paris, was elected an active member.

NEW ENGLAND BREVITIES.

On Wednesday of last week the United Firemen's of Philadelphia was admitted to transact business in Massachusetts, and Kollock, Rice & Co. were appointed agents for Boston and vicinity.

* * *

Franklin W. Ganse, who recently relinquished the position of superintendent of agents of the Columbia National Life, will next week take charge of the Eastern Massachusetts field of that company, as general agent, with headquarters at the home office.

* * *

Francis H. Stevens is now comfortably established in his attractive new office at 55 Kilby Street, and R. S. Hoffman & Co. are also at home in handsome new quarters at 12 Central Street.

* * *

The Swiss Reinsurance Co. of Zurich was admitted to Massachusetts last week and is represented in that State by J. W. Grover.

* * *

The Boston Board of Fire Underwriters yesterday voted a material reduction in the rates on single tenant cigar factories. EMIL SCHWAB.

Chronicle Paragraphs

A BOOK of 240 pages, with twenty-two chapters and sixteen appendices has been issued by S. Herbert Wolfe, the actuary on "The Examination of Insurance Companies."

As the sub-title indicates, the book was born in a series of talks to the author's office staff and its issue in book form was suggested by insurance officers and officials as a guide to junior examiners and to the accounting departments of companies. It contains much fundamental information, put lucidly, but with admirable attention to detail as is shown by the warning as to taking title company policies at their face value in passing on real estate investments.

There are chapters treating of assets and the proper methods of valuing them, the net value and claimable surrender value of life policies and reserves for unearned premiums and un-matured or undeterminable claims. Among the appendices, which are mainly made up of the sections of the New York Insurance law, pertinent to the work of the departmental examiner, are discussions by Mr. Wolfe of the reserve for unpaid liability insurance losses.

As to this last subject, Mr. Wolfe takes the ground disclaiming originality that a careful observation of the practical operations of liability companies will permit the actual cost for the various forms of policies to be calculated—i. e., the pure premium for the particular hazard. He suggests a tabulation of the experience of all the companies and gives the opinion that the new compensation laws will effect the loss ratios, and hence the amount of reserves which should be maintained.

In the appendix is an experience table for computing future liability losses, based on premiums and losses of one company from 1893 to 1906. A comparison of actual losses with estimates for the period 1898 to 1906, based on the experience from 1893 to 1898, shows that the actual payments of some \$560,000 differed from the estimate by \$3,000 only.

* * *

The Western Reserve Insurance Company of Cleveland, O., will retire from New York, as well as New Jersey, Pennsylvania, Massachusetts, Missouri and Iowa, on December 31, and will not renew its licenses. It will reinsure its Eastern business.

* * *

The Commercial Casualty Insurance Company of Newark, N. J., has terminated its relations with the Gray-Mandeville Company as general agents, and opened a city department in connection with the home office. The Banking and Insurance Department of the State of New Jersey

has made an examination of the company's affairs as of November 30, 1910, showing that the company's total liabilities including capital stock are \$274,670.86, and its surplus \$131,444.47. Its premium reserve is \$17,889.98.

* * *

The Washington Employers' Liability Commission has fixed \$4,000 as the value of a human life, and that sum will be the amount of the compensation paid the dependents of a killed workman in the State. The commission has about completed the workmen's compensation measure it has been working on for the last several months, and will report to Governor Hay, of Washington, before the end of the year. It is expected to be made effective October 1, 1911.

* * *

Compulsory liquidation has been ordered in London of the Law Car and General Insurance Corporation, which during the year 1910 had a premium income of £344,000 and unpaid capital of £160,000, with which to meet £123,000 expenses and £442,000 in losses paid and outstanding.

* * *

Charles I. Mell has resigned his special agency of the Continental to become on January 1 Secretary of the Georgia Fire and National Home Insurance companies of Atlanta, Ga.

* * *

A contract has been signed whereby the United States Casualty Company assumed as of yesterday noon all liability under all personal accident, health and liability policies of the Empire State Surety Company, which is primarily a surety and burglary insurance company.

* * *

Companies which ten years ago paid a total loss of \$75,000 on Salt Lake City property of the Mine and Smelter Supply Company have sued to get back the money on the ground of fraudulent concealment of the fact that the stock of goods included dynamite caps, which were stored in the burned building. The information on which the suit was based was obtained from old documents unearthed in other litigation.

* * *

Precautions for minimizing the fire risks from street illuminations during the festivities incident to the coronation of King George next June are under consideration in the London County Council.

The Provident has been particularly distinguished for the development of a highly trained force of agents. The systematic instruction which its agents receive has resulted in their being recognized as representatives of exceptional knowledge of the business and of marked efficiency.

PROSPEROUSLY BUSY!

Our agencies are steadily increasing this year's lead over the figures of our high record in 1909.

Our agents are prosperously busy. With Business Life Insurance and our unequalled Continuous Monthly Income policy they are reaching and satisfying the public and liberally rewarding themselves.

Inquiries invited from delivering producers.

COMPARATIVE RESERVE TABLES

By MILES M. DAWSON,
Consulting Actuary.

Containing Mean and Terminal Reserves for the usual forms of policies and by the following standards—

American Experience, Select and Ultimate $3\frac{1}{2}$ per cent.
American Experience, Select and Ultimate 3 per cent.
American Experience, Modified Preliminary Term $3\frac{1}{2}$ per cent.
American Experience, Modified Preliminary Term 3 per cent.
American Experience, Select and Ultimate 4 per cent.
Actuaries', Modified Preliminary Term 4 per cent.
American Experience, Committee of Fifteen, $3\frac{1}{2}$ per cent.
American Experience, Illinois and Tennessee, $3\frac{1}{2}$ per cent.
American Experience, Michigan, $3\frac{1}{2}$ per cent.
American Experience, Wisconsin, $3\frac{1}{2}$ per cent.
American Experience, New Jersey, $3\frac{1}{2}$ per cent.
H^M, Canadian Life Officers' Association, $3\frac{1}{2}$ per cent.
O^[M], Select and Ultimate, $3\frac{1}{2}$ per cent.

This covers all the standards, other than the net level premiums, in this country. Tables showing the first year margins set free by each method of valuation are given.

EDITION ALMOST EXHAUSTED ————— SAVES TIME AND MONEY

VARIOUS DERIVED TABLES---American Experience 3 and $3\frac{1}{2}$ PER CENT.

Accumulated Increasing Insurance.
Single Premiums Endowment Insurance.
Single Premiums Temporary Insurance.
Immediate Temporary Annuities.
Valuation Columns.

SELECT AND ULTIMATE VALUES.

Single Premiums, Whole Life.
Life Annuities.
Terminal Reserves, Life, Limited Payment Endowment.

Mean Reserves, Life, Limited Payment, Endowment.

LOGARITHMS, SEVEN PLACES.

Forborne Immediate Annuities.
Curtate Summations of D Column.
Immediate Temporary Annuities.

Uses.

Computing Annual Term Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
Computing Annual Endowment Insurance Premiums:
Divide endowment insurance values by immediate temporary annuities.
For these purposes the "select and ultimate" will be most useful.
Computing Annual Pure Endowment Premiums:
Divide pure endowment values by immediate temporary annuities or take reciprocals of forborne immediate annuities.
By these means, the net extra premium for a special guaranty can be quickly and accurately computed.
Computing Annual Semi or Double Endowment Premiums:
Add temporary insurance and pure endowment values for proper amounts and divide by immediate temporary annuity.
Computing Limited Premiums:
Divide the proper single premiums by immediate temporary annuity.
Computing Surrender Values:
Extended Insurance. Find the temporary insurance value next lower than the sum to purchase extension. This gives even number of years. Apply remainder to pay for additional days according to daily differences in the table.
Extended Insurance with Fractional Paid-up Endowment:
Deduct from purchase money, value of insurance for unexpired term; multiply remainder by accumulation, pure endowment, to get amount of endowment.
Computing Terminal Reserves:
Unvarying Benefits. Multiply net premiums by forborne immediate annuity and deduct accumulated temporary insurance.
Return Premium, Full Reserve. Multiply net premium by forborne immediate annuity and deduct accumulated temporary insurance and accumulated increasing insurance, multiplied by gross premiums to be reduced.
Return Premium, Extra Reserve. Multiply net extra premiums by forborne immediate annuity and deduct accumulated increasing insurance, multiplied by gross premiums to be returned.
Warranted Commissions for New Business.
Surrender Values.
Dividends.
